PROSPECTUS April 27, 2020

ELITE ACCESS IISM

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Fund's annual and semi-annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report
- Calling 1-866-349-4564
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all funds held in each variable contract you purchased from Jackson.

Please note that if you own more than one variable contract with Jackson, your delivery preferences must be set up for each variable contract separately.

SUPPLEMENT DATED SEPTEMBER 11, 2020 TO THE PROSPECTUS DATED APRIL 27, 2020

JNL® SERIES TRUST

Please note that the changes may impact your variable annuity product(s).

Unless otherwise noted, all changes are effective immediately.

Effective June 30, 2020, for the JNL Multi-Manager Mid Cap Fund, please delete all references to Derek Deutsch.

Effective June 30, 2020, for the JNL/WMC Balanced Fund, please delete all references to Edward P. Bousa.

Effective September 1, 2020, in the section entitled, "**Summary Overview of Each Fund**," under "**Expenses**," for the JNL Multi-Manager Alternative Fund, please add following at the end of the section:

JNAM will voluntarily waive 0.10% of management fees on the Fund's assets between \$850 million and \$1 billion. There is no guarantee that JNAM will continue to provide the waiver in the future.

Effective June 30, 2020, in the section entitled, "Summary Overview of Each Fund," under "Portfolio Management," for the JNL Multi-Manager Mid Cap Fund, please delete the "Portfolio Managers" table and corresponding endnote in the entirety and replace with the following:

Effective August 27, 2020, in the section entitled, "Summary Overview of Each Fund," under "Principal Risks of Investing in the Fund," for the JNL/BlackRock Global Natural Resources Fund, please delete "Precious metals-related securities risk."

Effective August 27, 2020, in the section entitled, "Summary Overview of Each Fund," under "Performance," for the JNL/BlackRock Global Natural Resources Fund, please delete the fourth paragraph in the entirety.

In the section entitled, "Summary Overview of Each Fund," under "Performance," for the JNL/Boston Partners Global Long Short Equity Fund, please delete first paragraph in the entirety and replace with the following:

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

Effective August 28, 2020, in the section entitled, "Summary Overview of Each Fund," under "Principal Investment Strategies," for the JNL/T. Rowe Price Balanced Fund, please delete the first through third paragraphs in the entirety and replace with the following:

Principal Investment Strategies. The Fund normally invests approximately 65% of its total assets in common stocks and 35% in fixed income securities, money market securities, and cash reserves. The Fund may invest up to 35% of its total assets in foreign securities.

The Fund has significant flexibility to invest in a broad range of equity, fixed income, and alternative asset classes in the U.S. and other markets throughout the world, both developed and emerging.

T. Rowe Price Associates, Inc. ("Sub-Adviser") may decide to overweight and underweight a particular asset class based on its outlook for the economy and financial markets. Under normal conditions, the Fund's allocation to the broad asset classes will be within the following ranges, each as a percentage of the Fund's net assets: stocks (55%-75%), and fixed income securities, money market securities, and cash reserves (25%-45%). When deciding upon allocations within these prescribed limits, the Sub-Adviser may favor fixed income securities if the economy is expected to slow sufficiently to hurt corporate profit growth. When strong economic growth is expected, the Sub-Adviser may favor stocks. The Fund will invest in bonds, including foreign issues, which are primarily investment grade (i.e., assigned one of the four highest credit ratings by established credit rating agencies) and are chosen from across the entire government, corporate, and asset- and mortgage-backed securities markets. Maturities generally reflect the Sub-Adviser's outlook for interest rates. The Fund may at times invest significantly in certain sectors.

Effective September 25, 2020, in the section entitled, "Summary Overview of Each Fund," under "Principal Investment Strategies," for the JNL/Vanguard U.S. Stock Market Index Fund, please delete the sixth paragraph in the entirety.

In the section entitled, "Summary Overview of Each Fund," under "Performance," for the JNL/Vanguard U.S. Stock Market Index Fund, please delete the first paragraph in the entirety and replace with the following:

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

Effective September 25, 2020, in the section entitled, "Summary Overview of Each Fund," under "Principal Investment Strategies," for the JNL/Vanguard International Stock Market Index Fund, please delete the ninth paragraph in the entirety.

Effective September 25, 2020, in the section entitled, "Summary Overview of Each Fund," under "Principal Investment Strategies," for the JNL/Vanguard Global Bond Market Index Fund, please delete the seventh paragraph in the entirety.

Effective September 25, 2020, in the section entitled, "Summary Overview of Each Fund," under "Principal Investment Strategies," for the JNL/Vanguard Moderate ETF Allocation Fund, JNL/Vanguard Moderate Growth ETF Allocation Fund, and JNL/Vanguard Growth ETF Allocation Fund, please delete the eleventh paragraph in the entirety.

Effective September 25, 2020, in the section entitled, "Summary Overview of Each Fund," under "Principal Risks of Investing in the Fund," for the JNL/Vanguard U.S. Stock Market Index Fund, JNL/Vanguard International Stock Market Index Fund, JNL/Vanguard Global Bond Market Index Fund, JNL/Vanguard Moderate ETF Allocation Fund, JNL/Vanguard Moderate Growth ETF Allocation Fund, and JNL/Vanguard Growth ETF Allocation Fund, please delete "Non-diversification risk."

Effective June 30, 2020, in the section entitled, "Summary Overview of Each Fund," under "Portfolio Management," for the JNL/WMC Balanced Fund, please delete the "Portfolio Managers" table and corresponding endnote in the entirety and replace with the following:

	Joined Fund Management

Jackson National Life Insurance Company® through
Jackson National Separate Account - I

This supplement updates the above-referenced prospectuses. Please read and keep it together with your prospectus for future reference. To obtain an additional copy of a prospectus, please contact us at our Annuity Service Center, P.O. Box 24068, Lansing, Michigan, 48909-4068; 1-800-644-4565; www.jackson.com.

> In the section titled "JACKSON," the first paragraph is deleted and replaced with the following:

We are a stock life insurance company organized under the laws of the state of Michigan in June 1961. Our legal domicile and principal business is 1 Corporate Way, Lansing, Michigan 48951. We are admitted to conduct life insurance and annuity business in the District of Columbia and all states except New York. Jackson is a wholly owned subsidiary of Jackson Financial Inc., which is a subsidiary of Prudential plc. Prudential plc owns a majority interest in Jackson Financial Inc. and is a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial, Inc., a company whose principal place of business is in the United States of America, or with The Prudential Assurance Company Ltd., a subsidiary of M&G plc, a company incorporated in the United Kingdom. Athene Co-Invest Reinsurance Affiliate 1A Ltd., a Bermuda Class C insurer under the Bermuda Insurance Act 1978, owns a minority interest in Jackson Financial Inc. Prudential plc is also the ultimate parent of PPM America, Inc., a sub-adviser for certain of the Funds. Jackson is the parent of Jackson National Asset Management, LLC ("JNAM"), the Funds' investment adviser and administrator. JNAM provides certain administrative services with respect to the Separate Account, including separate account administration services and financial and accounting services. JNAM is located at 225 West Wacker Drive, Chicago, IL 60606.

➤ Effective August 4, 2020, in the subsection titled "JNL Series Trust," under the section titled "INVESTMENT DIVISIONS," BlueBay Asset Management LLP and BlueBay Asset Management USA LLC are removed as sub-adviser and sub-sub-adviser, respectively, from the JNL Multi-Manager Alternative Fund.

SUPPLEMENT DATED AUGUST 21, 2020 TO THE PROSPECTUS DATED APRIL 27, 2020

JNL® SERIES TRUST

Please note that the changes may impact your variable annuity product(s).

Unless otherwise noted, all changes are effective immediately.

Effective August 26, 2020, please delete the first paragraph of the legend for each Fund's summary prospectus in the entirety and replace with the following:

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://connect.rightprospectus.com/Jackson. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to Prospectus Request@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Effective July 17, 2020, in the section entitled, "Summary Overview of Each Fund," under "Principal Risks of Investing in the Fund," for all applicable funds, please delete "Foreign regulatory risk" in the entirety and replace with following:

• Foreign regulatory risk — The Adviser is a subsidiary of Jackson. Jackson is a wholly owned subsidiary of Jackson Financial Inc., which is a subsidiary of Prudential plc. Prudential plc is a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America, or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Effective April 30, 2020, for the JNL/DoubleLine® Total Return Fund, please delete all references to Philip A. Barach.

Effective August 4, 2020, in the section entitled, "Summary Overview of Each Fund," under "Principal Investment Strategies," sub-heading, "Relative Value Strategies," for the JNL Multi-Manager Alternative Fund, please delete the first paragraph in the entirety.

Effective August 4, 2020, in the section entitled, "Summary Overview of Each Fund," under "Sub-Advisers," for the JNL Multi-Manager Alternative Fund, please delete BlueBay Asset Management LLP.

Effective August 4, 2020, in the section entitled, "Summary Overview of Each Fund," under "Portfolio Managers," for the JNL Multi-Manager Alternative Fund, please delete the table rows for Justin Jewell and Tim Leary.

In the section entitled, "Summary Overview of Each Fund," under "Principal Investment Strategies," sub-heading, "WCM Small Cap Value Strategy," for the JNL Multi-Manager Small Cap Value Fund, please delete the third through fifth paragraphs in the entirety.

In the section entitled, "Summary Overview of Each Fund," under "Principal Investment Strategies," for the JNL Multi-Manager Small Cap Value Fund, please add the following after the last paragraph:

JNAM also may choose to allocate the Fund's assets to additional strategies in the future. There is no assurance that any or all of the strategies discussed in this prospectus will be used by JNAM or the Sub-Advisers.

JNAM may also manage Fund assets directly to seek to enhance returns, or to hedge and to manage the Fund's cash and short-term instruments.

The Fund has flexibility in the relative weighting of each asset class and expects to vary the percentages of assets invested in each asset class from time to time. JNAM's allocations to the underlying Sub-Advisers will be a function of a variety of factors including each underlying strategy's expected returns, volatility, correlation, and contribution to the Fund's overall risk profile.

Effective July 31, 2020, in the section entitled, "Summary Overview of Each Fund," under "Portfolio Management," for the JNL/DoubleLine® Total Return Fund, please delete the "Portfolio Managers" table in the entirety and replace with following:

	Joined Fund Management	
Name:	Team In:	Title:
Jeffrey E. Gundlach	September 2013	Chief Executive Officer and Chief Investment Officer,
		DoubleLine
Ken Shinoda, CFA	July 2020	Portfolio Manager, DoubleLine
Andrew Hsu, CFA	September 2019	Portfolio Manager, DoubleLine

In the section entitled, "Summary Overview of Each Fund," under "Principal Investment Strategies," for the JNL/Franklin Templeton Growth Allocation Fund, please delete last paragraph in the entirety and replace with the following:

The Fund may also invest in derivative instruments. The Fund regularly uses currency derivatives, including forward foreign currency exchange contracts, currency futures contracts, currency swaps and currency options to hedge (protect) against currency risks. The Fund also may, from time to time, use a variety of equity-related derivatives, which may include purchasing or selling call and put options on equity securities and equity security indices, futures on equity securities and equity indexes and options on equity index futures, for various purposes including enhancing Fund returns, increasing liquidity, gaining exposure to particular instruments in more efficient or less expensive ways and/or hedging risks relating to changes in certain equity markets. In addition, the Fund may, from time to time, use credit default swaps and options on credit default swaps and interest rate derivatives, including interest rate swaps and interest rate/bond futures contracts, and options on interest rate/bond futures and on interest rate swaps (swaptions) for various purposes including enhancing Fund returns, increasing liquidity, gaining exposure to particular instruments in more efficient or less expensive ways and/or hedging risks relating to changes in interest rates. The use of such derivative transactions may allow the Fund to obtain net long or net short exposures to selected markets, interest rates, countries, currencies or durations.

This Supplement is dated August 21, 2020.

(To be used with JMV17183 04/20, JMV17955 04/20, JMV18691 04/20, JMV18692 04/20, JMV21086 04/20, JMV21451 04/20, JMV21452 04/20, JMV23537 04/20, JMV23538 04/20, JMV8037 04/20, JMV8037BE 04/20, JMV17183NY 04/20, JMV17955NY 04/20, JMV18691NY 04/20, JMV21086NY 04/20, JMV21451NY 04/20, JMV23537NY 04/20, JMV23538NY 04/20, JMV8037NY 04/20, JMV8037BENY 04/20, JMV16966 04/20, JMV9476 04/20, JMV8798 04/20, VC4224 04/20, JMV9476ML 04/20, JMV5763ML 04/20, JMV9476WF 04/20, JMV5763WF 04/20, JMV7698 04/20, VC5869 04/20, JMV7697 04/20, VC5890 04/20, VC5890ML 04/20, JMV2731 04/20, VC5995 04/20, FVC4224FT 04/20, VC5526 04/20, VC3656 04/20, VC3657 04/20, VC3723 04/20, JMV7698NY 04/20, NV5869 04/20, JMV7697NY 04/20, JMV16966NY 04/20, NV5890 04/20, JMV9476NY 04/20, NV4224 04/20, JMV9476WFNY 04/20, NV4224WF 04/20, NMV2731 04/20, NV3784 04/20, NV3174GW 04/20, NV3174CEGW 04/20, and NV5526 04/20.)

SUPPLEMENT DATED JUNE 12, 2020 TO THE PROSPECTUS DATED APRIL 27, 2020

JNL® SERIES TRUST

Please note that the changes may impact your variable annuity product(s).

Unless otherwise noted, all changes are effective immediately.

Effective May 1, 2020, in the section entitled, "Summary Overview of Each Fund," under "Portfolio Management," for the JNL/American Funds Growth-Income Fund, please delete the "Portfolio Managers" table in the entirety and replace with following:

	Joined Fund Management	
Name:	Team In:	Title:
Donald D. O'Neal	2010	Partner, Capital International Investors ("CII"), CRMC
Keiko McKibben	July 2018	Partner, Capital Research Global Investors ("CRGI"),
		CRMC
Dylan Yolles	2010	Partner, CII, CRMC
Charles E. Ellwein	May 2020	Partner, CRGI, CRMC
J. Blair Frank	2010	Partner, CRGI, CRMC
Claudia P. Huntington ¹	2013	Partner, CRGI, CRMC
William L. Robbins	2012	Partner, CII, CRMC

¹ Effective October 1, 2020, Claudia P. Huntington will no longer be a portfolio manager for the Fund.

In the section entitled, "Summary Overview of Each Fund," under "Principal Risks of Investing in the Fund," for the JNL Multi-Manager Emerging Markets Equity Fund, please add the following after the last bulleted paragraph:

• China risk – The Chinese economy is generally considered an emerging market and can be significantly affected by economic and political conditions and policy in China and surrounding Asian countries. A relatively small number of Chinese companies represents a large portion of China's total market and thus may be more sensitive to adverse political or economic circumstances and market movements. The economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, allocation of resources and capital reinvestment, among others. Under China's political and economic system, the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership. In addition, expropriation, including nationalization, confiscatory taxation, political, economic or social instability or other developments could adversely affect and significantly diminish the values of the Chinese companies in which the Fund invests. The Chinese securities markets are subject to more frequent trading halts and low trading volume, resulting in substantially less liquidity and greater price volatility. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

In the section entitled, "Summary Overview of Each Fund," under "Principal Investment Strategies," for the JNL Multi-Manager Mid Cap Fund, please delete the sixth paragraph the entirety and replace with following:

Nuance Investments, LLC ("Nuance") invests in securities of medium-capitalization companies. The Nuance Mid Cap Value Strategy primarily invests in equities, including depository receipts, of companies organized or traded in the United States that Nuance believes are high quality, though temporarily out of favor. The Nuance Mid Cap Value Strategy's investments may also include preferred or convertible preferred stocks. Nuance defines mid-capitalization companies as companies within the range of the capitalization of companies constituting the Russell Mid Cap Index at the time of initial purchase.

In the section entitled, "Summary Overview of Each Fund," under "Principal Investment Strategies," for the JNL/BlackRock Global Natural Resources Fund, JNL/Vanguard Moderate ETF Allocation Fund, JNL/Vanguard Moderate Growth ETF Allocation Fund, and JNL/Vanguard Growth ETF Allocation Fund, please add the following after the last paragraph:

The Fund may lend securities to increase its income.

In the section entitled, "Summary Overview of Each Fund," under "Principal Risks of Investing in the Fund," for the JNL/BlackRock Global Natural Resources Fund, JNL/Vanguard Moderate ETF Allocation Fund, JNL/Vanguard Moderate Growth ETF Allocation Fund, and JNL/Vanguard Growth ETF Allocation Fund, please add the following after the last bulleted paragraph:

• Securities lending risk – Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.

In the section entitled, "Summary Overview of Each Fund," under "Principal Risks of Investing in the Fund," for the JNL/GQG Emerging Markets Equity Fund, please add the following after the last bulleted paragraph:

• China risk – The Chinese economy is generally considered an emerging market and can be significantly affected by economic and political conditions and policy in China and surrounding Asian countries. A relatively small number of Chinese companies represents a large portion of China's total market and thus may be more sensitive to adverse political or economic circumstances and market movements. The economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, allocation of resources and capital reinvestment, among others. Under China's political and economic system, the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership. In addition, expropriation, including nationalization, confiscatory taxation, political, economic or social instability or other developments could adversely affect and significantly diminish the values of the Chinese companies in which the Fund invests. The Chinese securities markets are subject to more frequent trading halts and low trading volume, resulting in substantially less liquidity and greater price volatility. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

In the section entitled, "Summary Overview of Each Fund," under "Principal Risks of Investing in the Fund," for the JNL/Invesco International Growth Fund, please add the following after the last bulleted paragraph:

• China risk – The Chinese economy is generally considered an emerging market and can be significantly affected by economic and political conditions and policy in China and surrounding Asian countries. A relatively small number of Chinese companies represents a large portion of China's total market and thus may be more sensitive to adverse political or economic circumstances and market movements. The economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, allocation of resources and capital reinvestment, among others. Under China's political and economic system, the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership. In addition, expropriation, including nationalization, confiscatory taxation, political, economic or social instability or other developments could adversely affect and significantly diminish the values of the Chinese companies in which the Fund invests. The Chinese securities markets are subject to more frequent trading halts and low trading volume, resulting in substantially less liquidity and greater price volatility. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

Effective April 30, 2020, in the section entitled, "Summary Overview of Each Fund," under "Portfolio Management," for the JNL/Invesco Small Cap Growth Fund, please delete the "Portfolio Managers" table in the entirety and replace with following:

	Joined Fund Management	
Name:	Team In:	Title:
Juan Hartsfield	2004	Lead Portfolio Manager, Invesco
Clay Manley	2008	Portfolio Manager, Invesco
Justin Sander	April 2020	Portfolio Manager, Invesco

In the section entitled, "Summary Overview of Each Fund," under "Principal Risks of Investing in the Fund," for the JNL/Loomis Sayles Global Growth Fund, please add the following after the last bulleted paragraph:

• China risk – The Chinese economy is generally considered an emerging market and can be significantly affected by economic and political conditions and policy in China and surrounding Asian countries. A relatively small number of Chinese companies represents a large portion of China's total market and thus may be more sensitive to adverse political or economic circumstances and market movements. The economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, allocation of resources and capital reinvestment, among others. Under China's political and economic system, the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership. In addition, expropriation, including nationalization, confiscatory taxation, political, economic or social instability or other developments could adversely affect and significantly diminish the values of the Chinese companies in which the Fund invests. The Chinese securities markets are subject to more frequent trading halts and low trading volume, resulting in substantially less liquidity and greater price volatility. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.

Effective April 27, 2020, in the section entitled, "Summary Overview of Each Fund," for the JNL/Lord Abbett Short Duration Income Fund, immediately following the section entitled "Performance," please add the following:

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

In the section entitled, "Summary Overview of Each Fund," under "Principal Investment Strategies," for the JNL/T. Rowe Price Balanced Fund, please delete the first paragraph in the entirety and replace with the following:

Principal Investment Strategies. The Fund normally invests approximately 65% of its total assets in common stocks and 35% in fixed income securities. The Fund may invest up to 35% of its total assets in foreign securities.

This Supplement is dated June 12, 2020.

SUPPLEMENT DATED MAY 22, 2020 TO THE PROSPECTUS DATED APRIL 27, 2020

JNL® SERIES TRUST

Please note that the changes may impact your variable annuity product(s).

All changes are effective immediately.

In the section entitled, "Summary Overview of Each Fund," under "Expenses," for the JNL/American Funds Capital Income Builder Fund, please delete the table and corresponding footnotes in the entirety and replace with the following:

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A ¹	
Management Fee	1.02%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ²	0.15%	
Total Annual Fund Operating Expenses ³	1.47%	
Less Waiver/Reimbursement ⁴	0.51%	
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	0.96%	

The fee table and the example reflect the expenses of both the Fund and the Master Fund.

In the section entitled, "Summary Overview of Each Fund," under "Expense Example," for the JNL/American Funds Capital Income Builder Fund, please delete the table in the entirety and replace with the following:

JNL/American Funds Capital Income Builder Fund Class A				
1 year 3 years 5 years 10 years				
\$98 \$415 \$754 \$1,714				

In the section entitled, "Summary Overview of Each Fund," under "Expenses," for the JNL/American Funds Capital World Bond Fund, please delete the table and corresponding footnotes in the entirety and replace with the following:

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A ¹	
Management Fee	1.13%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ²	0.16%	
Total Annual Fund Operating Expenses ³	1.59%	
Less Waiver/Reimbursement ⁴	0.52%	
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	1.07%	

The fee table and the example reflect the expenses of both the Fund and the Master Fund.

² "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

³ Expense information has been restated to reflect current fees.

⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

² "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

³ Expense information has been restated to reflect current fees.

⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

In the section entitled, "Summary Overview of Each Fund," under "Expense Example," for the JNL/American Funds Capital World Bond Fund, please delete the table in the entirety and replace with the following:

JNL/American Funds Capital World Bond Fund Class A			
1 year 3 years 5 years 10 years			
\$109	\$451	\$817	\$1,845

In the section entitled, "Summary Overview of Each Fund," under "Expenses," for the JNL/American Funds New World Fund, please delete the table and corresponding footnotes in the entirety and replace with the following:

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment))
	Class A ¹
Management Fee	1.64%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ²	0.17%
Total Annual Fund Operating Expenses ³	2.11%
Less Waiver/Reimbursement ⁴	0.83%
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	1.28%

The fee table and the example reflect the expenses of both the Fund and the Master Fund.

In the section entitled, "Summary Overview of Each Fund," under "Expense Example," for the JNL/American Funds New World Fund, please delete the table in the entirety and replace with the following:

JNL/American Funds New World Fund Class A						
1 year 3 years 5 years 10 years						
\$130	\$581	\$1,058	\$2,376

ELITE ACCESS IISM

FLEXIBLE PREMIUM VARIABLE AND FIXED DEFERRED ANNUITY

Issued by
Jackson National Life Insurance Company® through
Jackson National Separate Account – I

The date of this prospectus is April 27, 2020. This prospectus states the information about the separate account, the Contract, and Jackson National Life Insurance Company ("Jackson") you should know before investing. This prospectus is a disclosure document and describes all of the Contract's material features, benefits, rights, and obligations. The description of the Contract's material provisions in this prospectus is current as of the date of this prospectus. If certain material provisions under the Contract are changed after the date of this prospectus, in accordance with the Contract, those changes will be described in a supplemented prospectus. You should carefully read this prospectus in conjunction with any applicable supplements. It is important that you also read the Contract and endorsements, which may reflect additional non-material state variations or other non-material variations. This information is meant to help you decide if the Contract will meet your needs. Please carefully read this prospectus and any related documents and keep everything together for future reference. Additional information about the separate account can be found in the Statement of Additional Information ("SAI") dated April 27, 2020 that is available upon request without charge. To obtain a copy, complete the Statement of Additional Information Request Form on page 57, or contact us at our:

Service Center P.O. Box 24068 Lansing, Michigan 48909-4068 1-800-644-4565 www.jackson.com

This prospectus describes the investment options and optional features that we currently offer under the Contract. At the time you purchase the Contract, it is possible that not all of the optional features listed in this prospectus will be available, as we reserve the right to prospectively restrict availability of the optional features. In addition, certain broker-dealers selling the Contracts may limit the investment options and/or optional features that are available to their customers. Ask your financial professional about which investment options and/or optional features are not offered. If a particular investment option or optional feature that interests you is not offered, you may want to contact another broker-dealer to explore its availability. In addition, not all optional features may be available in combination with other optional features, as we also reserve the right to prospectively restrict the availability to elect certain features if certain other optional features have been elected. We reserve the right to limit the number of Contracts that you may purchase. We also reserve the right to refuse initial and any or all subsequent Premium payments. Some optional features contain withdrawal restrictions that, if exceeded, may have a significant negative impact on the value of the feature and may cause the feature to prematurely terminate. Please confirm with us or your financial professional that you have the most current prospectus and supplements to the prospectus that describe the availability and any restrictions on the optional features.

We offer other variable annuity products with different product features, benefits and charges. In some states, you may purchase the Contract through an automated electronic transmission/order ticket verification procedure. Ask your financial professional about availability and the details.

The SAI is incorporated by reference into this prospectus, and its table of contents appears on page 57. The prospectus and SAI are part of the registration statement that we filed with the Securities and Exchange Commission ("SEC") about this securities offering. The registration statement, material incorporated by reference, and other information is available on the website the SEC maintains (http://www.sec.gov) regarding registrants that make electronic filings.

Jackson is relying on SEC Rule 12h-7, which exempts insurance companies from filing periodic reports under the Securities Exchange Act of 1934 with respect to variable annuity contracts that are registered under the Securities Act of 1933 and regulated as insurance under state law.

Neither the SEC nor any state securities commission has approved or disapproved these securities or passed upon the adequacy of this prospectus. It is a criminal offense to represent otherwise. We do not intend for this prospectus to be an offer to sell or a solicitation of an offer to buy these securities in any state where this is not permitted.

The Contract makes available for investment variable and fixed options. The fixed options are not available if you elect the Liquidity Option. The variable options are Investment Divisions of the Separate Account, each of which invests in one of the following Funds - all class A shares:

JNL Series Trust

The Funds are <u>not</u> the same mutual funds that you would buy directly from a retail mutual fund company or through your stockbroker. The summary prospectuses for the Funds are attached to this prospectus. You should read the summary prospectuses before investing.

This prospectus describes the Investment Divisions that we currently offer under the Contract. Certain broker-dealers selling the Contracts may limit the Investment Divisions that are available to their customers. Please contact your financial professional for a list of Investment Divisions currently available through your broker-dealer. Investment Divisions that are not available through your broker-dealer may be available through other broker-dealers, but to access them you may need to terminate your relationship with your broker-dealer and provide us with satisfactory evidence of termination. Please consider these potential limitations before purchasing the Contract.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Please note that if you own more than one variable contract with Jackson, your delivery preferences must be set up for each variable contract separately.

SPECIAL NOTICE REGARDING CORONAVIRUS DISEASE 2019 AND THE CORONAVIRUS AID, RELIEF, AND ECONOMIC SECURITY ("CARES") ACT

Effective March 27, 2020, the newly passed Coronavirus Aid, Relief, and Economic Security ("CARES") Act made several retirement related changes that may impact you. The CARES Act waives the requirement to take required minimum distributions ("RMDs") from tax-qualified contracts and Individual Retirement Accounts ("IRAs") in 2020. This waiver applies both to lifetime and post-death RMDs. In addition, for contracts retained after the death of the original owner that are required to be distributed within 5 years, pursuant to the CARES Act, the 5-year period now does not include 2020. As a result, impacted contracts will have one additional year before liquidation is required.

The waiver also applies to RMDs with respect to the 2019 tax year that are due to begin in 2020. If you turned age 70½ in 2019 and you have not taken your first RMD because it was not due until April 1, 2020, the CARES Act waives this RMD along with your 2020 tax year RMD.

The CARES Act provides additional withdrawal and loan relief (subject to availability) for tax-qualified contracts and IRAs in 2020 for eligible individuals.

Eligible individuals include:

- an individual diagnosed with the virus SARS-CoV-2 or with coronavirus disease 2019 (COVID-19) by a test approved by the Centers for Disease Control and Prevention;
- an individual if the individual's spouse or dependent is diagnosed with such virus or disease; or
- an individual who experiences adverse financial consequences as a result of being quarantined, being furloughed or laid off
 or having work hours reduced due to such virus or disease, being unable to work due to lack of child care due to such virus or
 disease, closing or reducing hours of a business owned or operated by the individual due to such virus or disease, or other
 factors as determined by the Secretary of the Treasury.

The withdrawal relief available to eligible individuals includes:

- waiving certain in-service distribution restrictions (such as age restrictions) for tax-qualified contracts;
- providing an exception to the 10% early distribution tax on distributions (up to \$100,000) taken before age 59 ½ on tax-qualified contracts and IRAs;
- waiving the eligible rollover distribution notice requirement and mandatory 20% withholding applicable to eligible rollover distributions;
- allowing the individual to include income attributable to the distribution over a three-year period beginning with the year the
 distribution would otherwise be taxable; and
- allowing the distribution to be recontributed to a tax-qualified contract or IRA within three years of the distribution.

The loan relief available to eligible owners of tax-qualified contracts (subject to availability) permits loans made during the 180-day period beginning on March 27, 2020 to increase the maximum loan amount from \$50,000 or 50% of the vested account balance to \$100,000 or 100% of the vested account balance. Further, the due date for any repayment on a loan that otherwise is due between May 27, 2020 and December 31, 2020, is delayed for one year.

You may wish to consult with your financial professional or personal tax advisor if you are impacted by any of these changes.

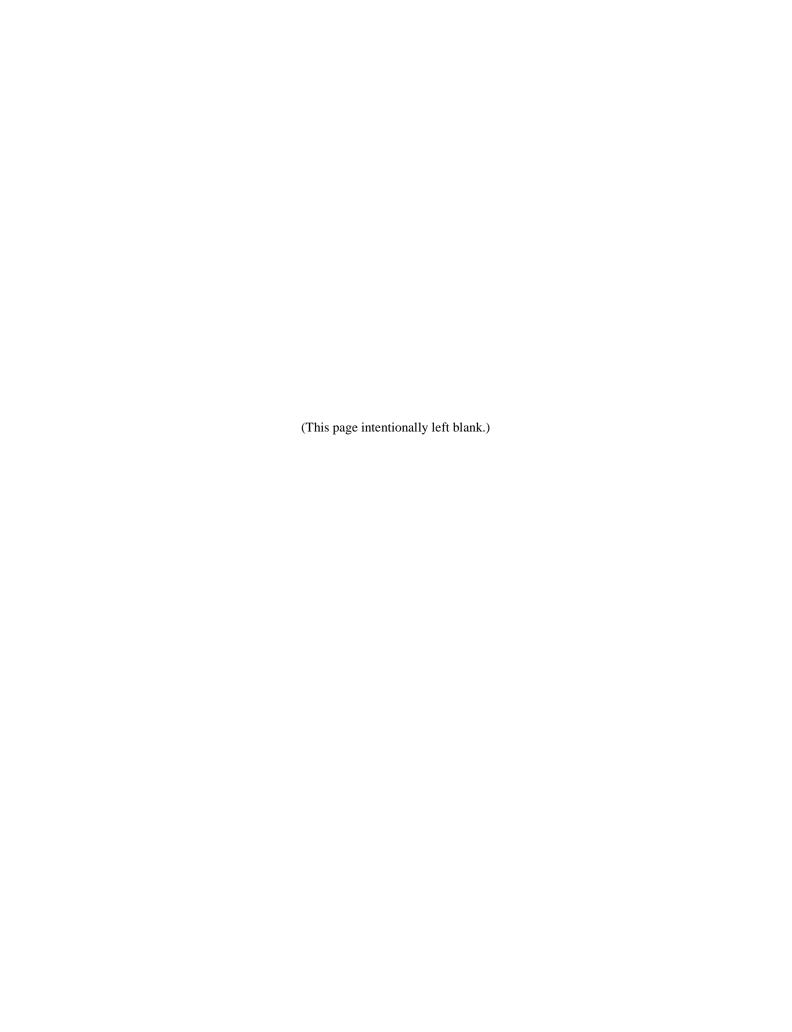

As a result of the spread of the COVID-19 coronavirus, we have implemented business continuity plans that were already in place to ensure the availability of services for our customers, work at home capabilities for our staff, where appropriate, and other ongoing risk management activities related to the current ongoing market stress. Nevertheless, we and our service providers and business partners are subject to certain risks, including those resulting from system failures, cybersecurity events, COVID-19 and other disasters. Such events can adversely impact us and our operations. Such events can also have an adverse impact on financial markets, U.S. and global economies, issuers of securities, and ultimately on the portfolios in which the Investment Divisions invest.

GLOSSARY

These terms are capitalized when used throughout this prospectus because they have special meaning. In reading this prospectus, please refer back to this glossary if you have any questions about these terms.

<u>Accumulation Unit</u> – a unit of measure we use to calculate the value in an Investment Division prior to the Income Date.

<u>Annuitant</u> – the natural person on whose life annuity payments for this Contract are based. The Contract allows for the naming of joint Annuitants. Any reference to the Annuitant includes any joint Annuitant.

<u>Annuity Unit</u> – a unit of measure we use in calculating the value of a variable annuity payment on and after the Income Date.

<u>Beneficiary</u> – the natural person or legal entity designated to receive any Contract benefits upon the Owner's death. The Contract allows for the naming of multiple Beneficiaries.

<u>Business Day</u> – each day that the New York Stock Exchange is open for business.

Completed Year – the succeeding twelve months from the date on which we receive a Premium payment. Completed Years specify the years from the date of receipt of the Premium and does not refer to Contract Years. If the Premium receipt date is on the Issue Date of the Contract then Completed Year 0-1 does not include the first Contract Anniversary. The first Contract Anniversary begins Completed Year 1-2 and each successive Completed Year begins with the Contract Anniversary of the preceding Contract Year and ends the day before the next Contract Anniversary.

If the Premium receipt date is other than the Issue Date or a subsequent Contract Anniversary, there is no correlation of the Contract Anniversary date and Completed Years. For example, if the Issue Date is January 15, 2021 and a Premium payment is received on February 28, 2021 then, although the first Contract Anniversary is January 15, 2022, Completed Year 0-1 for that Premium payment would begin on February 28, 2021 and end on February 27, 2022. Completed Year 1-2 for that Premium payment would begin on February 28, 2022.

<u>Contract</u> – the individual deferred variable and fixed annuity contract, including any endorsements.

<u>Contract Anniversary</u> – each one-year anniversary of the Contract's Issue Date.

<u>Contract Month</u> – the period of time between consecutive monthly anniversaries of the Contract's Issue Date.

<u>Contract Monthly Anniversary</u> – each one-month anniversary of the Contract's Issue Date.

<u>Contract Quarter</u> – the period of time between consecutive three-month anniversaries of the Contract's Issue Date.

<u>Contract Quarterly Anniversary</u> – each three-month anniversary of the Contract's Issue Date.

<u>Contract Value</u> – the sum of the allocations between the Contract's Investment Divisions and Fixed Account.

<u>Contract Year</u> – the succeeding twelve months from a Contract's Issue Date and every anniversary. The first Contract Year (Contract Year 0-1) starts on the Contract's Issue Date and extends to, but does not include, the first Contract Anniversary. Subsequent Contract Years start on an anniversary date and extend to, but do not include, the next anniversary date.

For example, if the Issue Date is January 15, 2021 then the end of Contract Year 0-1 would be January 14, 2022, and January 15, 2022, which is the first Contract Anniversary, begins Contract Year 1-2.

<u>Fixed Account</u> – part of our General Account to which the Contract Value you allocate is guaranteed to earn a stated rate of return over the specified period. The Fixed Account consists of the Fixed Account Options.

<u>Fixed Account Contract Value</u> – the larger of the Fixed Account Minimum Value or the sum of all amounts allocated to the Fixed Account Options, reduced by the gross amount of withdrawals and transfers from the Fixed Account Options, and applicable charges and taxes, plus all interest credited to the Fixed Account Options.

<u>Fixed Account Minimum Value</u> – the minimum guaranteed amount of Fixed Account Contract Value. The Fixed Account Minimum Value is equal to 87.5% of all amounts allocated to the Fixed Account Options, reduced by withdrawals and transfers from the Fixed Account Options, any applicable add-on benefit charges, taxes, and a \$50 annual expense allowance, accumulated at the Fixed Account minimum interest rate.

<u>Fixed Account Option</u> – a Contract option within the Fixed Account for a specific period under which a stated rate of return will be credited.

<u>Fund</u> – a registered management investment company in which an Investment Division of the Separate Account invests.

<u>General Account</u> – the General Account includes all our assets, including any Contract Value allocated to the Fixed Account, which are available to our creditors.

<u>Good Order</u> – when our administrative requirements, including all information, documentation and instructions deemed necessary by us, in our sole discretion, are met in order to issue a Contract or execute any requested transaction pursuant to the terms of the Contract.

<u>Income Date</u> – the date on which you begin receiving annuity payments.

<u>Investment Division</u> – one of multiple variable options of the Separate Account to allocate your Contract's value, each of which exclusively invests in a different available Fund. The Investment Divisions are called variable because the return on investment is not guaranteed.

Issue Date – the date your Contract is issued.

<u>Jackson</u>, <u>JNL</u>, <u>we</u>, <u>our</u>, <u>or</u> <u>us</u> – Jackson National Life Insurance Company. (We do not capitalize "we," "our," or "us" in the prospectus.)

<u>Latest Income Date</u> – the Contract Anniversary on or next following the date on which the Owner attains age 95 under a non-qualified contract, or such earlier date as required by the applicable qualified plan, law or regulation.

<u>Liquidity Option</u> – an add-on benefit that provides for no withdrawal charges.

<u>Market Value Adjustment</u> – an adjustment to the Contract Value allocated to the Fixed Account that is withdrawn, transferred, or annuitized before the end of the period.

Owner, you or your – the natural person or legal entity entitled to exercise all rights and privileges under the Contract. Usually, but not always, the Owner is the Annuitant. The Contract allows for the naming of joint Owners. (We do not capitalize "you" or "your" in the prospectus.) Any reference to the Owner includes any joint Owner.

<u>Premium(s)</u> – considerations paid into the Contract by or on behalf of the Owner. The maximum aggregate Premium payments you may make without prior approval is \$2.5 million. This maximum amount is subject to further limitations at any time on both initial and subsequent Premium payments.

Remaining Premium – total Premium paid into the Contract, reduced by withdrawals of Premium, including withdrawal charges, before withdrawals are adjusted for any applicable Market Value Adjustments or charges.

Required Minimum Distribution (RMD) – for certain qualified contracts, the amount defined under the Internal Revenue Code as the minimum distribution requirement as applied to your Contract only. This definition excludes any withdrawal necessary to satisfy the minimum distribution requirements of the Internal Revenue Code if the Contract is purchased with contributions from a nontaxable transfer after the death of the owner of a qualified contract.

<u>Separate Account</u> – Jackson National Separate Account – I. The Separate Account is divided into sub-accounts generally referred to as Investment Divisions

<u>Separate Account Contract Value</u> – the sum of all amounts allocated to any of the Contract's Investment Divisions.

KEY FACTS

The immediately following two sections briefly introduce the Contract (and its benefits and features) and its costs; however, please carefully read the whole prospectus and any related documents before purchasing the Contract to be sure that it will meet your needs.

Allocation Options	The Contract makes available Investment Divisions and a Fixed Account for allocation of your Premium payments and Contract Value. For more information about the Fixed Account, please see "THE FIXED ACCOUNT" beginning on page 12. For more information about the Investment Divisions, please see "INVESTMENT DIVISIONS" beginning on page 15.
Investment Purpose	The Contract is intended to help you save for retirement or another long-term investment purpose. The Contract is designed to provide tax deferral on your earnings, if it is not issued under a qualified retirement plan. Qualified plans confer their own tax deferral. For more information, please see "TAXES" beginning on page 50.
<u>Free Look</u>	If you change your mind about having purchased the Contract, you may return it without penalty. There are conditions and limitations, including time limitations, depending on where you live. For more information, please see "Free Look" beginning on page 55. In some states, we are required to hold the Premiums of a senior citizen in the Fixed Account or the JNL/WMC Government Money Market Investment Division during the free look period, unless we are specifically directed to allocate the Premiums to the Investment Divisions. State laws vary; your free look rights will depend on the laws of the state in which you purchased the Contract.
Optional Features	An optional Liquidity Option may be elected for an additional charge. This option may not be available in all states or through all broker-dealers. For more information, please see "LIQUIDITY OPTION" beginning on page 45.
<u>Purchases</u>	There are minimum and maximum Premium requirements. The Contract also has a Premium protection option, namely the Capital Protection Program. For more information about this option, please see "PURCHASES" beginning on page 40.
Withdrawals	Before the Income Date, there are a number of ways to access your Contract Value, generally subject to a charge or adjustment, particularly during the early Contract Years. The Contract has a free withdrawal provision or the optional Liquidity Option. For more information, please see "ACCESS TO YOUR MONEY" beginning on page 44.
Income Payments	There are a number of income options available. For more information, please see "INCOME PAYMENTS (THE INCOME PHASE)" beginning on page 46.
Death Benefit	The Contract has a death benefit that becomes payable if you die before the Income Date. There is also an add-on death benefit available. For more information, please see "DEATH BENEFIT" beginning on page 47.
Contract Charges	Various charges apply under the Contract as summarized in the "FEES AND EXPENSES TABLES" below. If the Contract Value is insufficient to pay the charges under the Contract, the Contract will terminate without value.

FEES AND EXPENSES TABLES

The following tables describe the fees and expenses that you will pay when purchasing, owning and taking withdrawals from the Contract. The first table (and footnotes) describes the fees and expenses that you will pay at the time that you purchase the Contract, take withdrawals from the Contract or transfer cash value between investment options. Fees and expenses also may apply after the Income Date. For more information, please see "Commutation Fee" on page 37, and "INCOME PAYMENTS (THE INCOME PHASE)" beginning on page 46.

Owner Transaction Expenses				
Front-end Sales Load		None		
Maximum Withdrawal Charge ¹				
Percentage of Remaining Premium withdrawn,	if applicable	6.5%		
Maximum Premium Taxes ²				
		3.5%		
Percentage of each Premium Transfer Charge ³ Per transfer after 25 in a Contract Year		3.5% \$25		

The withdrawal charge is based on a schedule lasting five Completed Years following each Premium, as shown in the table below. There is an optional Liquidity Option available that provides for no withdrawal charges. For more information on withdrawal charges, please see "Withdrawal Charge" under "Contract Charges" beginning on page 35.

Withdrawal Charge (as a percentage of Premium payments)

Completed Years Since Receipt Of Premium	0-1	1-2	2-3	3-4	4-5	5+
Withdrawal Charge	6.5%	6.0%	5.0%	4.0%	3.0%	0%

Premium taxes generally range from 0% to 3.5% and vary by state.

We do not count transfers in conjunction with Dollar Cost Averaging, Earnings Sweep, Rebalancing, and periodic automatic transfers. For information on the Dollar Cost Averaging, Earnings Sweep and Rebalancing programs please see the applicable section under "OTHER INFORMATION" beginning on page 54.

For overnight delivery on Saturday; otherwise, the overnight delivery charge is \$10 for withdrawals. We also charge up to \$25 for wire transfers in connection with withdrawals.

The following tables (and footnotes) describe the fees and expenses that you will pay periodically during the time that you own the Contract, not including the Funds' fees and expenses.

Periodic Expenses	
Base Contract	
Annual Contract Maintenance Charge ⁵	\$50
Separate Account Annual Expenses	
Annual percentage of average daily account value of Investment Divisions	
Core Contract Charge ⁶	1.00%
Total Separate Account Annual Expenses for Base Contract	1.00%

Add-On Benefits - Add-on benefits are available to add to your Contract. Please see the footnotes and the "Contract Charges" section for additional information on the add-on benefit charges.

The following add-on benefit is available for an additional charge. The charge is based on average daily Contract Value in the Investment Divisions.

Liquidity Option 0.25%

The following add-on death benefit charge is benefit based. Please see the "Contract Charges" section for additional information on the add-on death benefit charge.:

Maximum Current
Annual Annual
Charge Charge
0.40% 0.20%

Return of Premium Guaranteed Minimum Death Benefit ("GMDB")

This table shows the maximum and current total charges you would pay if you elected all of the c resulting in the highest possible combination of charges.	urrently available add-on Maximum Annual Charge	Current Annual Charge
Total Separate Account Annual Expenses	1.00%	1.00%
Add-On Benefit Charges ⁸	0.65%	0.45%
Total possible maximum and current charges	1.65%	1.45%

This charge is waived on Contract Value of \$50,000 or more. This charge is deducted proportionally from allocations to the Investment Divisions and the Fixed Account either annually (on your Contract Anniversary) or in conjunction with a total withdrawal, as applicable.

The next item shows the minimum and maximum total annual operating expenses charged by the Funds that you may pay periodically during the time that you own the Contract.

This charge is reduced to 0.85% if the Contract Value on the later of the Issue Date or the most recent Contract Quarterly Anniversary is greater than or equal to \$1 million.

Some add-on benefits are only available to select when purchasing the Contract and once purchased cannot be canceled. For more information, please see the applicable add-on benefit disclosures under "Access To Your Money" and "Death Benefits".

Add-on benefits are either based on the average daily Contract Value in the Investment Divisions or are benefit based. The charges used in the table are the Liquidity Option and the Return of Premium Guaranteed Minimum Death Benefit.

Total Annual Fund Operating Expenses

(Expenses that are deducted from Fund assets, including management and administration fees, 12b-1 service fees and other expenses.)

Minimum: 0.53%

Maximum: 2.41%

More detail concerning each Fund's fees and expenses is below. But please refer to the Funds' prospectuses for even more information, including investment objectives, performance, and information about Jackson National Asset Management, LLC® ("JNAM"), the Funds' Adviser and Administrator, as well as the sub-advisers.

JNL/American Funds New World Fund: Management Fee: 0.70%; Distribution and/or Service (12b-1) Fee: 0%; Other Expenses: 0.07%; Total Annual Portfolio Operating Expenses: 0.77%; Contractual Fee Waiver and/or Expense Reimbursement: (0.18%); Net Total Annual Portfolio Operating Expenses: 0.59%.

JNL/Vanguard Capital Growth Fund: Management Fee: 0.32%; Distribution and/or Service (12b-1) Fee: 0%; Other Expenses: 0.02%; Total Annual Portfolio Operating Expenses: 0.34%.

JNL/Vanguard Equity Income Fund: Management Fee: 0.28%; Distribution and/or Service (12b-1) Fee: 0%; Other Expenses: 0.02%; Total Annual Portfolio Operating Expenses: 0.30%.

JNL/Vanguard International Fund: Management Fee: 0.35%; Distribution and/or Service (12b-1) Fee: 0%; Other Expenses: 0.03%; Total Annual Portfolio Operating Expenses: 0.38%.

JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its administrative fee for at least one year from the date of this Prospectus. Thereafter, the waiver will automatically renew for one-year terms unless the Adviser provides written notice of the termination of the agreement to the Board of Trustees within 30 days of the end of the then current term.

Jackson National Asset Management, LLC ("JNAM" or "Adviser") has entered into a contractual agreement with the Fund under which it will waive a portion of its advisory fee for such time as the Fund is operated as a Feeder Fund, because during that time it will not be

providing the portfolio management portion of the investment advisory and management services. This fee waiver will generally continue as long as the Fund is part of a master-feeder Fund structure, but in any event, the fee waiver will continue for at least one year from the date of this Prospectus, unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees. The Management and the Annual Operating Expense columns in this table reflect the inclusion of the contractual fee waivers.

- JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its advisory fee for at least one year from the date of this Prospectus. Thereafter, the waiver will automatically renew for one-year terms unless the Adviser provides written notice of the termination of the agreement to the Board of Trustees within 30 days of the end of the then current term.
- JNAM has entered into a contractual agreement with the Fund under which it will waive a varying portion of its management fee in an amount equivalent to the Acquired Fund Fees and Expenses ("AFFE") attributable to the Fund's investment in funds managed by the Sub-Adviser (each an "JPMorgan Underlying Fund"). The AFFE for each JPMorgan Underlying Fund is the "Total Annual Fund Operating Expenses after Fee Waivers and/or Expense Reimbursements" disclosed in the current prospectus for each JPMorgan Underlying Fund. This fee waiver arrangement will continue for at least one year from the date of the current Prospectus, unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.
- F "Other Expenses" includes an Administrative Fee of 0.05% which is payable to JNAM.
- G "Other Expenses" includes an Administrative Fee of 0.09% which is payable to JNAM.
- H "Other Expenses" includes an Administrative Fee of 0.10% which is payable to JNAM.
- ¹ "Other Expenses" includes an Administrative Fee of 0.15% which is payable to JNAM.
- ^J "Other Expenses" includes an Administrative Fee of 0.20% which is payable to JNAM.
- K Expense Information has been restated to reflect current fees.
- ^L "Other Expenses" includes an Administrative Fee of 0.14% which is payable to JNAM.
- JNAM has contractually agreed to waive 0.05% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees. JNAM has contractually agreed to waive a varying portion of the management fees of the Fund to prevent any increase in total expenses in the Fund due to its investment in the JNL/DFA International Core Equity Fund. This fee waiver arrangement will continue for at least one year from the date of the current Prospectus, unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.
- JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.
- JNAM has contractually agreed to waive fees and/or reimburse expenses of the Fund to the extent necessary to limit the total operating expenses of each class of shares of the Fund, transactional costs, if any, interest, taxes and dividend and extraordinary expenses, to an annual rate (as a percentage of the average daily net assets of the Fund) equal to or less than the Fund's investment income for the period. The fee waiver will continue through April 30, 2021. The Adviser may extend the fee waiver for a subsequent one-year term, and thereafter, the fee waiver will automatically renew for additional subsequent one-year terms unless the Board of Trustees approves the elimination of the fee waiver. In addition, when the Fund receives income sufficient to pay a dividend, the Adviser may recapture previously waived fees and expenses for a period of three years.

EXAMPLE

The example below is intended to help you compare the cost of investing in the Contract with the cost of investing in other variable annuity contracts. These costs include Contract Owner transaction expenses, Contract fees, Separate Account annual expenses, Fund expenses, and add-on benefit charges.

(The Annual Contract Maintenance Charge is determined by dividing the total amount of such charges collected during the calendar year by the total market value of the Investment Divisions and the Fixed Account, if applicable.)

The example assumes that you invest \$10,000 in the Contract for the time periods indicated. Neither transfer fees nor Premium tax charges are reflected in the example. The example also assumes that your investment has a 5% annual return on assets each year.

The following example includes maximum Fund expenses and the cost if you select the most expensive combination of add-on benefits offered under the Contract (using the maximum possible charge) as follows: the optional Liquidity Option in years in which a

Contract with the Liquidity Option would incur more costs than a Contract without the Liquidity Option, and the Return of Premium Guaranteed Minimum Death Benefit. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

If you take a total withdrawal of your Contract Value at the end of the applicable time period:

1 year	3 years	5 years	10 years
\$1,107	\$1,877	\$2,605	\$4,662

If you annuitize at the end of the applicable time period:

1 year *	3 years	5 years	10 years
\$1,107	\$1,377	\$2,305	\$4,662

^{*}Withdrawal charges apply to annuitizations occurring within one year of the Contract's Issue Date.

If you do not take a total withdrawal of your Contract Value:

1 year	3 years	5 years	10 years
\$457	\$1,377	\$2,305	\$4,662

The example does not represent past or future expenses. Your actual costs may be higher or lower.

CONDENSED FINANCIAL INFORMATION

The information about the Accumulation Unit values constitutes the condensed financial information. This information is not currently provided, but will be provided in the Statement of Additional Information when information for a full calendar year is available. The Accumulation Unit value is determined on the basis of the per share value of an underlying Fund less applicable Separate Account charges, including any add-on benefit charges that are based on average daily Contract Value in the Investment Divisions and are deducted daily as part of the calculation of the Accumulation Unit values. Information about the Separate Account charges and charges for add-on benefits can be found in the "Periodic Expenses" tables above.

The financial statements of the Separate Account and Jackson can be found in the Statement of Additional Information. The financial statements of the Separate Account include information about all the contracts offered through the Separate Account. The financial statements of Jackson that are included should be considered only as bearing upon the company's ability to meet its contractual obligations under the Contracts. Jackson's financial statements do not bear on the future investment experience of the assets held in the Separate Account. For your copy of the Statement of Additional Information, please contact us at the Service Center. Our contact information is on the cover page of this prospectus.

THE ANNUITY CONTRACT

Your Contract is a contract between you, the Owner, and us. Your Contract is intended to help facilitate your retirement savings on a tax-deferred basis, or other long-term investment purposes, and provides for a death benefit. Purchases under tax-qualified plans should be made for other than tax deferral reasons. Tax-qualified plans provide tax deferral that does not rely on the purchase of an annuity contract. We will not issue a Contract to someone older than age 85. Add-on benefits may have different requirements, as noted.

Your Contract Value may be allocated to:

- our Fixed Account, as may be made available by us, or as may be otherwise limited by us, and
- Investment Divisions of the Separate Account that invest in underlying Funds.

Your Contract, like all deferred annuity contracts, has two phases:

- the accumulation phase, when you make Premium payments to us, and
- the **income phase**, when we make income payments to you.

As the Owner, you can exercise all the rights under your Contract. In general, joint Owners jointly exercise all the rights under the Contract. In some cases, such as telephone and internet transactions, joint Owners may authorize each joint Owner to act individually. On jointly owned Contracts, correspondence and required documents will be sent to the address of record of the primary Owner.

You can assign your Contract at any time during your lifetime, but we will not be bound until we receive written notice of the assignment (there is an assignment form). We reserve the right to refuse an assignment, and an assignment may be a taxable event. Please contact our Service Center for help and more information.

The Contract is an individual flexible Premium variable and fixed deferred annuity and may be issued as an individual contract. Contracts issued in your state may provide different features and benefits than those described in this prospectus. This prospectus provides a description of the material rights and obligations under the Contract. Your Contract and any endorsements are the formal contractual agreement between you and the Company.

JACKSON

We are a stock life insurance company organized under the laws of the state of Michigan in June 1961. Our legal domicile and principal business address is 1 Corporate Way, Lansing, Michigan 48951. We are admitted to conduct life insurance and annuity business in the District of Columbia and all states except New York. We are ultimately a wholly owned subsidiary of Prudential plc (London, England). Prudential plc is also the ultimate parent of PPM America, Inc., a sub-adviser for certain of the Funds. Jackson is the parent of Jackson National Asset Management, LLC ("JNAM"), the Funds' investment adviser and administrator. JNAM provides certain administrative services with respect to the Separate Account, including separate account administration services and financial and accounting services. JNAM is located at 225 West Wacker Drive, Chicago, IL 60606.

We issue and administer the Contracts and the Separate Account. We maintain records of the name, address, taxpayer identification number and other pertinent information for each Owner, the number and type of Contracts issued to each Owner and records with respect to the value of each Contract.

THE FIXED ACCOUNT

Contract Value allocated to the Fixed Account will be placed with other assets in our General Account. Unlike the Separate Account, the General Account is not segregated or insulated from the claims of the insurance company's creditors. Investors are looking to the financial strength of the insurance company for its obligations under the Contract, including, for example, guaranteed minimum death benefits. The Fixed Account is not registered with the SEC. Disclosures regarding the Fixed Account, however, may be subject to the general provisions of the federal securities laws relating to the accuracy and completeness of statements made in prospectuses. Both the availability of, and transfers into and out of, the Fixed Account (which consists of the Fixed Account Options) may be subject to contractual and administrative requirements. For more information, please see the application, check with the financial professional helping you to purchase the Contract, or contact us at our Service Center.

The Fixed Account Options are not available on Contracts with the optional Liquidity Option.

Fixed Account Options. Each Fixed Account Option credits interest to your Contract Value in the Fixed Account for a specified period that you select, subject to availability (currently, five and seven year periods are available, but we also may make available one and three year periods), so long as the Contract Value in that Fixed Account Option is not withdrawn, transferred, or annuitized until the end of the specified period. We reserve the right, in our sole discretion, to limit or suspend availability of the Fixed Account Options. You may not elect any Fixed Account Option that extends beyond the Income Date, other than the one-year option except as described herein under "End of Fixed Account Option Periods"; and election of any option will not extend the Income Date. Rather, commencing on the Income Date, we will cease to credit interest under any Fixed Account Option that has not yet reached the end of its term.

Rates of Interest We Credit. These Contracts guarantee a Fixed Account minimum interest rate that applies to every Fixed Account Option under any Contract, regardless of the term of that option. The Fixed Account minimum interest rate guaranteed by the Contracts at least equals the minimum rate prescribed by the applicable nonforfeiture law in each state where the Contracts are sold. In addition, we establish a declared rate of interest ("base interest rate") at the time you allocate any Premium payment or other Contract Value to a Fixed Account Option, and that base interest rate will apply to that allocation for the entire term of the Fixed Account Option that you select. To the extent that the base interest rate that we establish for any allocation is higher than the Fixed Account minimum interest rate, we will credit that allocation with the higher base interest rate. Thus, the declared base interest rate could be greater than the guaranteed Fixed Account minimum interest rate specified in your Contract, but will never cause your allocation to be credited at less than the currently applicable Fixed Account minimum interest rate. We may declare different base

interest rates at different times, although any new base interest rate Jackson declares for a Fixed Account Option will apply only to Premiums or other amounts allocated to that Fixed Account Option after the new rate goes into effect.

The Fixed Account minimum interest rate will be a rate, credited daily, that will be reset every January pursuant to a formula that is prescribed under applicable state nonforfeiture laws and that is set forth in the Contracts. Specifically, the Fixed Account minimum interest rate will be reset each January to equal the average of the daily five-year Constant Maturity Treasury Rates reported by the Federal Reserve for the preceding October (rounded to the nearest 1/20 of a percent), less 1.25%, provided that the Fixed Account minimum interest rate will never be less than 1% or more than 3%. As noted above, these limits are prescribed by state nonforfeiture laws and set forth in the Contracts. This means that the Fixed Account minimum interest rate applicable to your Contract will in no case ever exceed a maximum of 3%. Your Contract's initial Fixed Account minimum interest rate will be stated in your Contract, and will be the rate that is in effect on the Contract's Issue Date pursuant to the preceding formula. Thereafter, on the Contract Monthly Anniversary in each January, the Fixed Account minimum interest rate will be reset in accordance with the formula above.

If you allocate a Premium payment or other Contract Value to a Fixed Account Option, the Fixed Account minimum interest rate in effect at the time of the allocation will apply to that allocation until the reset of the Fixed Account minimum interest rate on the next Contract Monthly Anniversary in January. At that point, the Fixed Account minimum interest rate will be reset according to the formula detailed above, which could change the amount of interest you earn thereafter on that allocation. Thus, if the new Fixed Account minimum interest rate is higher than the rate previously being credited to your allocation to a Fixed Account Option, the interest rate being credited may increase to that new higher rate. On the other hand, if the new Fixed Account minimum interest rate is lower than the rate being credited to your allocation, the interest rate being credited may decrease to that lower rate, but will never fall below the base interest rate. We will advise you of any new Fixed Account minimum interest rate in the fourth quarter report for the calendar year preceding the January Contract Monthly Anniversary on which the reset occurs.

For the most current information about applicable interest rates, you may contact your financial professional or our Service Center (at the address and phone number on the cover page of this prospectus).

Market Value Adjustment. A Market Value Adjustment may apply to amounts withdrawn, transferred, or annuitized from a Fixed Account Option prior to the end of the specified period. The Market Value Adjustment reflects changes in the level of interest rates since the beginning of the Fixed Account Option period. In order to determine whether there will be a Market Value Adjustment, we first consider the base interest rate of the Fixed Account Option from which you are removing Contract Value as a withdrawal, transfer, or annuitization. As discussed above under 'Rates of Interest we Credit,' the 'base interest rate' is a rate which we declare at the time you allocate any amount to a Fixed Account Option and which we credit to that Fixed Account Option if and when such base interest rate is higher than the Fixed Account minimum interest rate. The Market Value Adjustment is based on the relationship of the base interest rate on your Fixed Account Option to the 'current new business interest rate,' which is a rate that we use solely for purposes of calculating the amount of any Market Value Adjustment. The 'current new business interest rate' is 0.25% per annum greater than the base interest rate we are then offering on new allocations to Fixed Account Options with the same duration as your Fixed Account Option. If we are not offering that duration at the time of your withdrawal, transfer, or annuitization, we will estimate a base interest rate for that duration based on the closest durations that we are then offering.

If the base interest rate available on a new Fixed Account Option at the time of your withdrawal, transfer, or annuitization is higher than the base interest rate declared at your allocation to a Fixed Account Option, a downward adjustment to the amount withdrawn, transferred, or annuitized may apply, which would reduce the amount paid, transferred, or annuitized. If the base interest rate credited to a new Fixed Account Option at the time of withdrawal, transfer, or annuitization is lower than the base interest rate declared at the time of your allocation to a Fixed Account Option, an upward adjustment to the amount withdrawn, transferred, or annuitized may apply, which would increase the amount paid, transferred, or annuitized. There will be no Market Value Adjustment if the two rates are the same. A Market Value Adjustment will not otherwise affect the values under your Contract.

If the current new business interest rate is greater than the base interest rate for the Fixed Account Option from which the amount is removed, there will be no Market Value Adjustment if the difference between the two is less than 0.25%. This limitation avoids decreases in the amount paid, transferred, or annuitized in situations where the general level of interest rates has declined but the current new business interest rate nevertheless exceeds the base interest rate for your Fixed Account Option because of the additional 0.25% that is added when determining the current new business interest rate (as described above).

Also, there is no Market Value Adjustment on: amounts taken from the one-year Fixed Account Option; death benefit payments; payments pursuant to a life contingent income option or an income option resulting in payments spread over at least five years; amounts withdrawn for Contract charges; free withdrawals; amounts removed from any Fixed Account Option on the Latest Income Date and amounts removed from any Fixed Account Option in the 30-day period following the end of a Fixed Account Option. In no event will the amount of a total withdrawal, transfer, or annuitization from the Fixed Account Options be less than the Fixed Account Minimum Value. In the case of a withdrawal or transfer from a Fixed Account Option, the amount withdrawn or transferred will have

been credited with interest at a rate at least equal to the Fixed Account minimum interest rate, even if subject to a Market Value Adjustment that otherwise would have reduced it below that rate.

The following example illustrates how the Fixed Account Minimum Value may affect a Market Value Adjustment on a total withdrawal. If you allocated your \$10,000 initial Premium to the Fixed Account and your declared rate of interest was 3%, after one year (assuming no other transactions) your Contract Value in the Fixed Account would be \$10,265. If the Fixed Account minimum interest rate was 1%, your Fixed Account Minimum Value would be \$8,787.50. In this case, a Market Value Adjustment could not reduce the withdrawal by more than \$1,477.50 (the difference between your Contract Value in the Fixed Account and the Fixed Account Minimum Value). For example, if you request a total withdrawal (gross amount of \$10,265) and it is subject to a \$1,000 negative Market Value Adjustment, the withdrawal would be adjusted to \$9,265. However, if it were subject to a negative \$1,500 Market Value Adjustment, the withdrawal would be adjusted to \$8,787.50 (i.e. the Fixed Account Minimum Value), so that it does not invade the Fixed Account Minimum Value. Immediately after the latter withdrawal example, there will be no difference between your Contract Value in the Fixed Account and Fixed Account Minimum Value, and no negative Market Value Adjustments will apply on subsequent withdrawals until the Contract Value in the Fixed Account Minimum Value.

End of Fixed Account Option Periods. Whenever a specified period ends, you will have 30 days to transfer or withdraw the Contract Value in the Fixed Account Option, and there will not be a Market Value Adjustment. If you do nothing, then after 30 days, the Contract Value that remains in that Fixed Account Option will be subject to another specified period of the same duration, subject to availability, and provided that that specified period will not extend beyond the Income Date. If such new Fixed Account Option would extend beyond the Income Date, we will use the longest available Fixed Account Option that does not extend beyond the Income Date; or (if no such period is available) we will credit interest at the current interest rate under the shortest available Fixed Account Option up to the Income Date. If the specified period of the same duration that has ended is no longer available, we will use the next shortest period that is then available.

Additional Information Concerning the One-Year Fixed Account Option. The one-year Fixed Account Option is not currently available. If we make it available in the future, the following provisions will apply. Transfer restrictions may be imposed limiting your ability to make transfers out of this option for at least three years, as further described below.

If you allocate Premiums to the one-year Fixed Account Option, we may require that the amount in the one-year Fixed Account Option be automatically transferred on a monthly basis in periodic installments to your choice of Investment Divisions within 12 months of the date we received the Premium, so that at the end of the period, all amounts in the one-year Fixed Account Option will have been transferred. The amount will be determined based on the amount allocated to the one-year Fixed Account Option and the base interest rate. Charges, withdrawals and additional transfers taken from the one-year Fixed Account Option will reduce the length of time it takes to deplete the account balance. These automatic transfers will not count against the 25 free transfers in a Contract Year or any maximum on amounts transferable from the one-year Fixed Account Option that we may impose as described in numbered paragraphs 1-4 under "Transfers and Frequent Transfer Restrictions" later in this prospectus.

Interest will continue to be credited daily on the account balance remaining in the one-year Fixed Account Option as funds are automatically transferred into your choice of Investment Divisions. However, the effective yield over the 12-month automatic transfer period will be less than the base interest rate (or, if applicable, the Fixed Account minimum interest rate), as the applicable rate will be applied to the declining balance in the one-year Fixed Account Option.

Please also refer to "Transfers and Frequent Transfer Restrictions" beginning on page 41 for information about certain restrictions, limits and requirements that may apply (or may in the future apply) to transfers to or from the Fixed Account Options. In particular, we describe certain additional restrictions that may apply with respect to transfers from the one-year Fixed Account Option, including the possibility that you might not be able to transfer all of your Contract Value out of the one-year Fixed Account Option for at least three years. Please note, the interest rate that is in effect when these restrictions are imposed will only apply for the remainder of the one-year Fixed Account Option period, and the interest rates credited thereafter for the remainder of the period the restrictions are in effect may be lower or higher. Accordingly, before allocating any Premium payments or other Contract Value to the one year Fixed Account Option, you should consider carefully the conditions we may impose upon your use of that option.

The **DCA+ Fixed Account Option, if available,** offers a fixed interest rate that we guarantee for a period of up to one year in connection with dollar-cost-averaging transfers to one or more of the Investment Divisions or systematic transfers to other Fixed Account Options. From time to time, we will offer special enhanced rates on the DCA+ Fixed Account Option. DCA+ Fixed Account Option is only available for new Premiums. The DCA+ Fixed Account Option is not available if you select the Liquidity Option. We provide more information about Dollar Cost Averaging, including DCA+, under "Other Information" later in this prospectus.

THE SEPARATE ACCOUNT

We established the Separate Account on June 14, 1993, pursuant to the provisions of Michigan law. The Separate Account is a separate account under state insurance law and a unit investment trust under federal securities law and is registered as an investment company with the SEC.

We have claimed an exclusion from the definition of the term "Commodity Pool Operator" under the Commodity Exchange Act (CEA) with respect to the Separate Account. Therefore, we are not subject to registration or regulation as a Commodity Pool Operator under the CEA with respect to the Separate Account.

The assets of the Separate Account legally belong to us and the obligations under the Contracts are our obligations. However, we are not allowed to use the Contract assets in the Separate Account to pay our liabilities arising out of any other business we may conduct. All of the income, gains and losses resulting from these assets (whether or not realized) are credited to or charged against the Contracts and not against any other Contracts we may issue.

The Separate Account is divided into Investment Divisions. We do not guarantee the investment performance of the Separate Account or any of its Investment Divisions.

INVESTMENT DIVISIONS

Your Contract Value may be allocated to no more than 99 Investment Divisions and Fixed Account Options at any one time. Each Investment Division purchases the shares of one underlying Fund (mutual fund portfolio) that has its own investment objective. The Investment Divisions are designed to offer the potential for a higher return than the Fixed Account Options. However, this is not guaranteed. It is possible for you to lose your Contract Value allocated to any of the Investment Divisions. If you allocate Contract Values to the Investment Divisions, the amounts you are able to accumulate in your Contract during the accumulation phase depend upon the performance of the Investment Divisions you select. The amount of the income payments you receive during the income phase also will depend, in part, on the performance of the Investment Divisions you choose for the income phase.

This prospectus describes the Investment Divisions that we currently offer under the Contract. Certain broker-dealers selling the Contracts may limit the Investment Divisions that are available to their customers. Please contact your financial professional for a list of Investment Divisions currently available through your broker-dealer. Investment Divisions that are not available through your broker-dealer may be available through other broker-dealers, but to access them you may need to terminate your relationship with your broker-dealer and provide us with satisfactory evidence of termination. Please consider these potential limitations before purchasing the Contract.

The following Funds in which the Investment Divisions invest may be known as a "Fund of Funds" or as Funds investing in other "Underlying Funds" or investing in ETFs. Funds offered in a multi-tiered structure may have higher expenses than direct investments in the Underlying Funds or ETFs. You should read the summary prospectuses for the Funds and/or the prospectus for the JNL Series Trust for more information.

In addition to the Fund of Funds structure, certain of the Funds operate as feeder funds that invest in master funds. These Funds are identified in the following descriptions by the designation ("Feeder Fund") following the name of the Fund. For more information about a Feeder Fund, you should read the summary prospectuses for the Funds and/or the prospectus for the applicable Fund.

The names of the Funds that are available, along with the names of the advisers and sub-advisers and a brief statement of each investment objective, are below:

JNL Series Trust

JNL/American Funds Balanced Fund ("Feeder Fund")

Jackson National Asset Management, LLC, *investment adviser to the Feeder Fund* (and Capital Research and Management CompanySM, *investment adviser to the Master Fund*)

Seeks high total return (including income and capital gains) consistent with preservation of capital over the long term through exclusive investment in Class 1 shares of the American Funds Insurance Series® - Asset Allocation FundSM ("Master Fund"). The Master Fund varies its mix of equity securities, debt securities and money market instruments. Under normal market conditions, the Master Fund expects (but is not required) to maintain an investment mix falling within the following ranges: 40%-80% in equity securities, 20%-50% in debt securities and 0%-40% in money market instruments and cash.

JNL/American Funds® Blue Chip Income and Growth Fund ("Feeder Fund")

Jackson National Asset Management, LLC, *investment adviser to the Feeder Fund* (and Capital Research and Management CompanySM, *investment adviser to the Master Fund*)

Seeks both income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing through exclusive investment in the Class 1 shares of the American Funds Insurance Series[®] - Blue Chip Income and Growth FundSM ("Master Fund"). The Master Fund invests primarily in dividend-paying common stocks of larger, more established companies domiciled in the United States with market capitalizations greater than \$4 billion.

JNL/American Funds Capital Income Builder Fund ("Feeder Fund")

Jackson National Asset Management, LLC, *investment adviser to the Feeder Fund* (and Capital Research and Management CompanySM, *investment adviser to the Master Fund*)

Seeks to provide both a level of current income exceeding the average yield on U.S. stocks generally and to provide a growing stream of income over the years by investing through exclusive investment in the Class 1 shares of the American Funds Insurance Series[®] - Capital Income Builder FundSM ("Master Fund"), with a secondary objective to provide growth of capital. The Master Fund normally will invest at least 90% of its assets in income-producing securities (with at least 50% of its assets in common stocks and other equity securities).

JNL/American Funds Capital World Bond Fund ("Feeder Fund")

Jackson National Asset Management, LLC, *investment adviser to the Feeder Fund* (and Capital Research and Management CompanySM, *investment adviser to the Master Fund*)

Seeks, over the long term, a high level of total return consistent with prudent investment management through exclusive investment in the Class 1 shares of the American Funds Insurance Series[®] - Capital World Bond FundSM ("Master Fund"). The Master Fund seeks to provide as high a level of total return as is consistent with prudent management, by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in bonds. As the Master Fund seeks to invest globally, the Master Fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but no fewer than three countries).

JNL/American Funds Global Growth Fund ("Feeder Fund")

Jackson National Asset Management, LLC, investment adviser to the Feeder Fund (and Capital Research and Management Company, investment adviser to the Master Fund)

Seeks long-term growth of capital through exclusive investment in Class 1 shares of the American Funds Insurance Series[®] - Global Growth FundSM (the "Master Fund"). The Master Fund invests primarily in common stocks of companies around the world that have the potential for growth. As a fund that seeks to invest globally, the Master Fund will allocate its assets among securities of companies domiciled in various countries, including the United States and foreign countries, including emerging market countries. Under normal market conditions, the Master Fund seeks to invest at least 30% of its net assets in issuers domiciled outside of the United States.

JNL/American Funds Global Small Capitalization Fund ("Feeder Fund")

Jackson National Asset Management, LLC, *investment adviser to the Feeder Fund* (and Capital Research and Management CompanySM, *investment adviser to the Master Fund*)

Seeks growth of capital over time through exclusive investment in the Class 1 shares of the American Funds Insurance Series® - Global Small Capitalization FundSM ("Master Fund"). The Master Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in growth-oriented common stocks and other equity-type securities of companies with small market capitalizations, measured at the time of purchase. As the Master Fund seeks to invest globally, the Master Fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but no fewer than three countries).

JNL/American Funds Growth Fund ("Feeder Fund")

Jackson National Asset Management, LLC, *investment adviser to the Feeder Fund* (and Capital Research and Management Company, *investment adviser to the Master Fund*)

Seeks growth of capital through exclusive investment in Class 1 shares of the American Funds Insurance Series® - Growth FundSM (the "Master Fund"). The Master Fund invests primarily in common stocks and seeks to invest in companies that the Master Fund's investment adviser believes offers superior opportunities for growth of capital. The Master Fund may invest up to 25% of its assets in common stocks and other securities (including convertible and nonconvertible preferred stocks, bonds, and other debt securities) of issuers domiciled outside the U.S.

JNL/American Funds Growth-Income Fund ("Feeder Fund")

Jackson National Asset Management, LLC, *investment adviser to the Feeder Fund* (and Capital Research and Management CompanySM, *investment adviser to the Master Fund*)

Seeks long-term growth of capital and income through exclusive investment in the Class 1 shares of the American Funds Insurance Series® - Growth-Income FundSM ("Master Fund"). The Master Fund seeks to make the investment grow and provide income by investing primarily in common stocks or other equity-type securities, such as preferred stocks, convertible preferred stocks and convertible bonds, that the investment adviser to the Master Fund believes demonstrate the potential for appreciation and/ or dividends. The Master Fund may invest up to 15% of its assets, at the time of purchase, in securities of issuers domiciled outside the United States.

JNL/American Funds International Fund ("Feeder Fund")

Jackson National Asset Management, LLC, *investment adviser to the Feeder Fund* (and Capital Research and Management CompanySM, *investment adviser to the Master Fund*)

Seeks long-term growth of capital through exclusive investment in the Class 1 shares of the American Funds Insurance Series® -International FundSM ("Master Fund"). The Master Fund seeks to make the investment grow by investing primarily in common stocks of companies domiciled outside the United States, including companies domiciled in emerging markets, that the investment adviser to the Master Fund believes have the potential for growth. Investors in the Master Fund should have a long-term perspective and, for example, be able to tolerate potentially sharp, short-term declines in value.

JNL/American Funds New World Fund ("Feeder Fund")

Jackson National Asset Management, LLC, *investment adviser to the Feeder Fund* (and Capital Research and Management CompanySM, *investment adviser to the Master Fund*)

Seeks long-term capital appreciation through exclusive investment in the Class 1 shares of the American Funds Insurance Series® -New World Fund® ("Master Fund"). The Master Fund may invest in companies without regard to market capitalization, including companies with small market capitalizations. Investors in the Master Fund should have a long-term perspective and, for example, be able to tolerate potentially sharp, short-term declines in value. Under normal market conditions, the Master Fund will invest at least 35% of its assets in equity and debt securities of issuers primarily based in qualified countries that have developing economies and/or markets.

JNL/Vanguard Capital Growth Fund ("Feeder Fund")

Jackson National Asset Management, LLC, investment adviser to the Feeder Fund (and PRIMECAP Management Company, investment adviser to the Master Fund)

Seeks long-term capital appreciation through exclusive investment in the shares of the Vanguard Variable Insurance Fund Capital Growth Portfolio ("Master Fund"). The Master Fund invests in stocks considered to have above-average earnings growth potential that is not reflected in their current market prices. The Master Fund consists predominantly of large- and mid-capitalization stocks.

JNL/Vanguard Equity Income Fund ("Feeder Fund")

Jackson National Asset Management, LLC, *investment adviser to the Feeder Fund* (and Wellington Management Company LLP and The Vanguard Group, Inc., *investment advisers to the Master Fund*)

Seeks to provide an above-average level of current income and reasonable long-term capital appreciation through exclusive investment in the shares of the Vanguard Variable Insurance Fund Equity Income Portfolio ("Master Fund"). The Master Fund invests mainly in common stocks of mid-size and large companies whose stocks pay above-average levels of dividend income and are considered to have the potential for capital appreciation.

JNL/Vanguard International Fund ("Feeder Fund")

Jackson National Asset Management, LLC, *investment adviser to the Feeder Fund* (and Baillie Gifford Overseas Ltd. and Schroder Investment Management North America Ltd (Schroder Investment Management North America Inc. (*sub-adviser to the Master Fund*), *investment advisers to the Master Fund*)

Seeks to provide long-term capital appreciation through exclusive investment in the shares of the Vanguard Variable Insurance Fund International Portfolio ("Master Fund"). The Master Fund invests predominantly in the stocks of companies located outside the United States and is expected to diversify its assets in countries across developed and emerging markets. In selecting stocks, the Master Fund's investment advisors evaluate foreign markets around the world and choose large-, mid-, and small-capitalization companies considered to have above-average growth potential.

JNL Aggressive Growth Allocation Fund

Jackson National Asset Management, LLC

Seeks capital growth by investing in Class I shares of a diversified group of other Funds ("Underlying Funds"), which are part of the JNL Series Trust and the JNL Investors Series Trust.

Under normal circumstances, the Fund allocates approximately 70%-100% of its assets to Underlying Funds that invest primarily in equity securities, 0%-30% to Underlying Funds that invest primarily in fixed-income securities and 0%-20% of its assets to Underlying Funds that invest primarily in money market securities.

JNL Conservative Allocation Fund

Jackson National Asset Management, LLC

Seeks the generation of income through investment in other funds (the "Underlying Funds"). The Fund allocates its assets to Class I shares of Underlying Funds that invest primarily in fixed-income and other income-oriented securities (including high-yield ("junk") bonds) of issuers in the U.S. and foreign countries, including emerging markets.

JNL Growth Allocation Fund

Jackson National Asset Management, LLC

Seeks capital growth and current income by investing in Class I shares of a diversified group of other Funds ("Underlying Funds"), which are part of the JNL Series Trust and the JNL Investors Series Trust.

Under normal circumstances, the Fund allocates approximately 60%-90% of its assets to Underlying Funds that invest primarily in equity securities, 0%-40% to Underlying Funds that invest primarily in fixed-income securities and 0%-20% of its assets to Underlying Funds that invest primarily in money market securities.

JNL iShares Tactical Growth Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks long-term growth of capital through investment in a diversified group of exchange-traded funds ("Underlying ETFs"). Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in underlying exchange-traded funds. Under normal market conditions, the Adviser allocates approximately 60% to 100% (with a target allocation of 80%) of the

Fund's assets to Underlying ETFs that invest primarily in equity securities, 0% to 40% (with a target allocation of 20%) of the Fund's assets to Underlying ETFs that invest primarily in fixed-income securities and/or cash alternatives, and up to 15% (with a target allocation of 0%) of the Fund's assets to Underlying ETFs that invest primarily in alternative assets and strategies. The Adviser may also allocate the Fund's assets to securities and derivative contracts to meet the Fund's allocation targets.

JNL iShares Tactical Moderate Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks long-term growth of capital through investment in exchange-traded funds ("Underlying ETFs"). Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified group of underlying exchange-traded funds. Under normal market conditions, the Adviser allocates approximately 20% to 60% (with a target allocation of 40%) of the Fund's assets to Underlying ETFs that invest primarily in equity securities, 40% to 80% (with a target allocation of 60%) of the Fund's assets to Underlying ETFs that invest primarily in fixed-income securities and/or cash alternatives, and up to 15% (with a target allocation of 0%) of the Fund's assets to Underlying ETFs that invest primarily in alternative assets and strategies. The Adviser may also allocate the Fund's assets to securities and derivative contracts to meet the Fund's allocation targets.

JNL iShares Tactical Moderate Growth Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks long-term growth of capital through investment in a diversified group of exchange-traded funds ("Underlying ETFs"). Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified group of underlying exchange-traded funds. Under normal market conditions, the Adviser allocates approximately 40% to 80% (with a target allocation of 60%) of the Fund's assets to Underlying ETFs that invest primarily in equity securities, 20% to 60% (with a target allocation of 40%) of the Fund's assets to Underlying ETFs that invest primarily in fixed-income securities and/or cash alternatives, and up to 15% (with a target allocation of 0%) of the Fund's assets to Underlying ETFs that invest primarily in alternative assets and strategies. The Adviser may also allocate the Fund's assets to securities and derivative contracts to meet the Fund's allocation targets.

JNL Moderate Allocation Fund

Jackson National Asset Management, LLC

Seeks a balance between the generation of income and the long-term growth of capital through investment in other funds (the "Underlying Funds"). The Fund allocates its assets to Class I shares of Underlying Funds that invest primarily in fixed-income and other income-oriented securities (including high-yield ("junk") bonds) as well as dividend-paying equity securities of issuers in the U.S. and foreign countries, including emerging markets.

JNL Moderate Growth Allocation Fund

Jackson National Asset Management, LLC

Seeks capital growth, and secondarily, current income by investing in Class I shares of a diversified group of other Funds ("Underlying Funds"), which are part of the JNL Series Trust and the JNL Investors Series Trust.

Under normal circumstances, the Fund allocates approximately 40%-80% of its assets to Underlying Funds that invest primarily in equity securities, 20%-60% to Underlying Funds that invest primarily in fixed-income securities and 0%-20% of its assets to Underlying Funds that invest primarily in money market securities.

JNL Multi-Manager Alternative Fund

Jackson National Asset Management, LLC (and BlueBay Asset Management LLP (and sub-sub-adviser, BlueBay Asset Management USA LLC); DoubleLine Capital LP; First Pacific Advisors, LP; Lazard Asset Management, LLC; Loomis, Sayles & Company L.P.; Westchester Capital Management, LLC; Western Asset Management Company; and Boston Partners Global Investors, Inc.)

Seeks long term growth of capital by allocating among a variety of alternative strategies managed by unaffiliated investment managers who may implement the following principal investment strategies: equity long/short strategies, event driven and merger arbitrage strategies, relative value strategies and global macro strategies.

JNL Multi-Manager Emerging Markets Equity Fund

Jackson National Asset Management, LLC (and Kayne Anderson Rudnick Investment Management, LLC; T. Rowe Price Associates, Inc.; WCM Investment Management, LLC; and Wellington Management Company LLP)

Seeks long-term capital appreciation by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a variety of emerging market equity strategies, sometimes referred to as "sleeves," managed by unaffiliated investment managers.

JNL Multi-Manager International Small Cap Fund

Jackson National Asset Management, LLC (and Causeway Capital Management LLC and WCM Investment Management, LLC)

Seeks long-term capital appreciation by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in international small cap strategies, sometimes referred to as "sleeves," managed by unaffiliated investment managers.

JNL Multi-Manager Mid Cap Fund

Jackson National Asset Management, LLC (and Champlain Investment Partners, LLC; ClearBridge Investments, LLC; Nuance Investments, LLC; and Victory Capital Management, Inc.)

Seeks long-term total return by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a variety of mid-capitalization growth and value strategies managed by unaffiliated investment managers.

JNL Multi-Manager Small Cap Growth Fund

Jackson National Asset Management, LLC (and Granahan Investment Management, Inc.; Kayne Anderson Rudnick Investment Management, LLC; Victory Capital Management Inc.; and WCM Investment Management, LLC)

Seeks long-term capital appreciation by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a variety of small cap growth strategies managed by unaffiliated investment managers.

JNL Multi-Manager Small Cap Value Fund

Jackson National Asset Management, LLC (and Congress Asset Management, LLP; Cooke & Bieler L.P.; WCM Investment Management, LLC; and Reinhart Partners, Inc.)

Seeks long-term total return by investing, under normal market conditions, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a variety of small cap value strategies managed by five unaffiliated investment managers.

JNL/American Funds Growth Allocation Fund

Jackson National Asset Management, LLC

Seeks capital growth with a secondary emphasis on current income by investing in Class 1 shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of either the American Funds Insurance Series® ("AFIS") or the American Funds R6 mutual fund share class. Not all Funds of the American Funds are available as Underlying Funds. Under normal circumstances, the Fund allocates approximately 60%-100% of its assets to Underlying Funds that invest primarily in equity securities and 0%-40% of its assets to Underlying Funds that invest primarily in fixed-income securities, and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

JNL/American Funds Moderate Growth Allocation Fund

Jackson National Asset Management, LLC

Seeks a balance between current income and growth of capital by investing in Class 1 shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of either the American Funds Insurance Series® ("AFIS") or the American Funds R6 mutual fund share class. Not all Funds of the American Funds are available as Underlying Funds. Under normal circumstances, the Fund allocates approximately 40%-80% of its assets to Underlying Funds that invest primarily in equity securities and 20%-60% of its assets to Underlying Funds that invest primarily in fixed-income securities.

JNL/AQR Large Cap Defensive Style Fund

Jackson National Asset Management, LLC (and AQR Capital Management, LLC)

Seeks total return, which consists of capital appreciation and income, by pursuing a "defensive" investment style, seeking to provide downside protection with upside potential through active stock selection, risk management, and diversification. The Fund pursues its objective by investing, under normal market conditions, at least 80% of its net assets (including any borrowings for investment purposes) in "Equity Instruments" of large-capitalization issuers. The Fund can invest in companies of any size and may invest in small- and mid-cap companies from time to time in the discretion of the Sub-Adviser.

JNL/AQR Large Cap Relaxed Constraint Equity Fund

Jackson National Asset Management, LLC (and AQR Capital Management, LLC)

Seeks long-term capital appreciation by investing in a broad mix of equity securities that aims to produce long-term capital appreciate in excess of the MSCI USA Index. The Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities or equity related instruments of large-capitalization companies, which the sub-adviser generally considers to be those companies with market capitalizations within the range of the Index at the time of purchase.

JNL/AQR Managed Futures Strategy Fund

Jackson National Asset Management, LLC (and AQR Capital Management, LLC)

Seeks positive absolute returns by investing primarily in a portfolio of futures contracts, futures-related instruments, and equity swaps. Equity swaps include, but are not limited to, global developed and emerging market equity index futures, swaps on equity index futures and equity swaps, global developed and emerging market currency forwards, global developed fixed-income futures, bond futures and swaps on bond futures and may also invest in commodity futures and swaps on commodity futures.

JNL/BlackRock Advantage International Fund

Jackson National Asset Management, LLC (and BlackRock Investment Management, LLC)

Seeks to provide long-term capital appreciation by investing at least 80% of its net assets (plus the amount of any borrowings for investment purposes) in non-U.S. equity securities and equity-like instruments of companies that are components of the companies included in the MSCI EAFE® Index and derivatives that are tied economically to securities of the Index. The Fund primarily seeks to buy common stock and may also invest in preferred stock and convertible securities.

JNL/BlackRock Global Allocation Fund

Jackson National Asset Management, LLC (and BlackRock Investment Management, LLC)

Seeks high total investment return by investing in a portfolio of equity and debt securities, money market securities and other short-term securities or instruments of issuers located around the world. Generally, the Fund will invest in both equity and debt securities and seeks diversification across markets, industries and issuers as one of its strategies to reduce volatility. Equity securities include common stock, rights and warrants, preferred stock, securities convertible into common stock, or securities or other instruments whose price is linked to the value of common stock.

JNL/BlackRock Global Natural Resources Fund

Jackson National Asset Management, LLC (and BlackRock International Limited)

Seeks long-term capital growth by investing primarily in equity securities of companies with substantial natural resource assets. Under normal circumstances, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in companies with substantial natural resource assets or in securities the value of which is related to the market value of some natural resource asset. The Fund may invest in securities of issuers with any market capitalization. There are no geographic limits on the Fund's investments.

JNL/BlackRock Large Cap Select Growth Fund

Jackson National Asset Management, LLC (and BlackRock Investment Management, LLC)

Seeks long-term capital appreciation by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities of U.S. large capitalization companies. The Fund defines large capitalization companies as those with a market capitalization of at least \$2.0 billion at the time of investment. Investments in equity securities include common stock and preferred stock, as well as American Depository Receipts. In addition, up to 20% of the Fund's net assets may be invested in foreign equity securities.

JNL/Boston Partners Global Long Short Equity Fund

Jackson National Asset Management, LLC (and Boston Partners Global Investors, Inc.)

Seeks long-term growth of capital by investing in stocks identified by the Sub-Adviser as undervalued and takes short positions in stocks that the Sub-Adviser has identified as overvalued. The Fund will invest, both long and short, primarily in equity securities issued by U.S. and non-U.S. companies of any market capitalization size.

JNL/Causeway International Value Select Fund

Jackson National Asset Management, LLC (and Causeway Capital Management LLC)

Seeks long-term growth of capital income and income by investing, under normal circumstances, in common stocks of companies located in developed countries outside the U.S. The Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in stocks of companies located in a number of foreign countries and invests the majority of its total assets in companies that pay dividends or repurchase their shares.

JNL/ClearBridge Large Cap Growth Fund

Jackson National Asset Management, LLC (and ClearBridge Investments, LLC)

Seeks long-term capital growth by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities or other equity investments with similar economic characteristics of U.S. companies with large market capitalizations.

JNL/DFA Growth Allocation Fund

Jackson National Asset Management, LLC

Seeks total return consisting of capital appreciation and current income by investing in shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are part of DFA Investment Dimensions Group, Inc., Dimensional Investment Group Inc., as well as Class I shares of JNL/DFA International Core Equity Fund. To achieve its investment objective, the Fund allocates its assets to Underlying Funds that invest in equity and fixed-income securities. Generally, the Fund invests its assets in domestic and international equity Underlying Funds and fixed-income Underlying Funds to achieve an allocation of approximately 60% to 100% (with a target allocation of approximately 80%) of the Fund's assets to domestic and international equity Underlying Funds and 0% to 40% (with a target allocation of approximately 20%) of its assets to fixed-income Underlying Funds.

JNL/DFA International Core Equity Fund

Jackson National Asset Management, LLC (and Dimensional Fund Advisors LP)

Seeks to achieve long-term capital appreciation by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in non-U.S. equity securities and/or investments that provide exposure to non-U.S. securities. The Fund purchases a broad and diverse group of securities of non-U.S. companies in developed markets with a greater emphasis on small-capitalization, value, and high-profitability companies as compared to their representation in the International Universe.

JNL/DFA Moderate Growth Allocation Fund

Jackson National Asset Management, LLC

Seeks total return consisting of capital appreciation and current income by investing in shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are part of DFA Investment Dimensions Group, Inc., Dimensional Investment Group Inc., as well as Class I shares of JNL/DFA International Core Equity Fund. To achieve its investment objective, the Fund allocates its assets to Underlying Funds that invest in equity and fixed-income securities. Generally, the Fund invests its assets in domestic and international equity Underlying Funds and fixed-income Underlying Funds to achieve an allocation of approximately 40% to 80% (with a target allocation of approximately 60%) of the Fund's assets to domestic and international equity Underlying Funds and 20% to 60% (with a target allocation of approximately 40%) of its assets to fixed-income Underlying Funds.

JNL/DFA U.S. Core Equity Fund

Jackson National Asset Management, LLC (and Dimensional Fund Advisors LP)

Seeks long-term capital appreciation by investing, under normal market conditions, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities of U.S. companies. The Fund purchases a broad and diverse group of common stocks of U.S. companies with a greater emphasis on small capitalization, value and high profitability companies as compared to their representation in the U.S. universe, as defined by the Sub-Adviser. The percentage allocation of the assets of the Fund to securities of the largest U.S. growth companies will generally be reduced from between 2.5% and 25% of their percentage weight in the U.S. universe. The percentage by which the Fund's allocation to securities of the largest U.S. growth companies is reduced will change due to market movements.

JNL/DFA U.S. Small Cap Fund

Jackson National Asset Management, LLC (and Dimensional Fund Advisors LP)

Seeks long-term capital appreciation by using a market capitalization weighted approach, purchasing a broad and diverse group of the common stocks of U.S. small-capitalization companies. Under normal circumstances, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in securities of U.S. small-cap companies.

JNL/DoubleLine® Core Fixed Income Fund

Jackson National Asset Management, LLC (and DoubleLine Capital LP)

Seeks to maximize current income and total return by investing under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of fixed-income instruments of varying maturities, which may be represented by forwards or derivatives such as options, futures contracts, or swap agreements.

JNL/DoubleLine® Emerging Markets Fixed Income Fund

Jackson National Asset Management, LLC (and DoubleLine Capital LP)

Seeks high total return from current income and capital appreciation by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in fixed-income instruments with exposure to emerging markets countries. These fixed-income instruments include but are not limited to securities issued or guaranteed by companies (including foreign hybrid securities), financial institutions and government entities in emerging market countries and other securities bearing fixed or variable interest rates of any or no maturity.

JNL/DoubleLine® Shiller Enhanced CAPE® Fund

Jackson National Asset Management, LLC (and DoubleLine Capital LP)

Seeks total return (capital appreciation and current income) which exceeds the total return in excess of the Shiller Barclays CAPE® US Sector TR USD Index. The Fund will seek to use derivatives, or a combination of derivatives and direct investments to provide a return that tracks closely the performance of the Index. The Fund will also invest in a portfolio of debt securities to provide additional long-term total return.

JNL/DoubleLine® Total Return Fund

Jackson National Asset Management, LLC (and DoubleLine Capital LP)

Seeks to maximize total return by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in bonds. Bonds include bonds, debt securities, and other fixed income instruments issued by governmental or private-sector entities.

JNL/Fidelity Institutional Asset Management® Total Bond Fund

Jackson National Asset Management, LLC (and FIAM LLC)

Seeks a high level of current income by investing under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in debt securities of all types and repurchase agreements for those securities. The Fund may invest up to 20% of its assets in lower-quality debt securities (those of less than investment-grade quality, also referred to as "high yield debt securities" or "junk bonds").

JNL/First State Global Infrastructure Fund

Jackson National Asset Management, LLC (and Colonial First State Asset Management (Australia) Limited)

Seeks total return through growth of capital and inflation-protected income by investing, under normal market conditions, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in publicly traded equity securities of infrastructure companies. The Fund will typically invest in U.S. and non-U.S. (foreign markets), which may include developing and emerging market countries.

JNL/Franklin Templeton Global Multisector Bond Fund

Jackson National Asset Management, LLC (and Franklin Advisers, Inc.)

Seeks total investment return consisting of a combination of interest income, capital appreciation, and currency gains. Under normal market conditions the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in fixed and floating rate debt securities and debt obligations (including convertible bonds) of governments, government-related issuers, or corporate issuers worldwide. The Fund may also invest in inflation-indexed securities and securities or structured products that are linked to or derive their value from another security, asset or currency of any nation. The Fund's assets will be invested in issuers located in at least three countries (including the U.S.).

JNL/Franklin Templeton Growth Allocation Fund

Jackson National Asset Management, LLC (and Franklin Advisers, Inc. and sub-sub-advisers: Franklin Templeton Institutional, LLC and Templeton Global Advisors Limited)

Seeks long-term total return that is consistent with an acceptable level of risk by investing in a broad range of equity, fixed income, and alternative asset classes in the U.S. and other markets throughout the world, both developed and emerging and less

developed countries. Under normal market conditions, the Sub-Adviser uses a flexible allocation approach when allocating the Fund's assets among the broad asset classes of equity and fixed-income investments.

JNL/Franklin Templeton Income Fund

Jackson National Asset Management, LLC (and Franklin Advisers, Inc.)

Seeks to maximize income while maintaining prospects for capital appreciation by investing, under normal market conditions, in a diversified portfolio of debt and equity securities. The equity securities in which the Fund invests consist primarily of common stock. Debt securities include all varieties of fixed, floating and variable rate instruments, including secured and unsecured bonds, bonds convertible into common stock, senior floating rate and term loans, mortgage-backed securities and other asset-backed securities, debentures, and shorter term instruments. The Fund seeks income by selecting investments such as corporate, foreign and U.S. Treasury bonds, as well as stocks with attractive dividend yields.

JNL/Franklin Templeton International Small Cap Fund

Jackson National Asset Management, LLC (and Franklin Templeton Institutional, LLC and Templeton Investment Counsel, LLC)

Seeks long-term capital appreciation by investing, under normal market conditions, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in investments of smaller companies, located outside of the U.S., including those of emerging or developing markets. For this Fund, smaller companies are defined as those that, at the time of purchase of the investment, have market capitalizations that do not exceed the greater of (i) \$5 billion or the equivalent in local currencies or (ii) the highest market capitalization in the Morgan Stanley Capital International (MSCI) Europe, Australasia, Far East (EAFE) Small Cap Index or the All Country World ex US (ACWIxUS) Small Cap Index.

JNL/Goldman Sachs 4 Fund

Jackson National Asset Management, LLC

Seeks capital appreciation by making initial allocations (25%) of its assets and cash flows to the Class I shares of the following four Underlying Funds on a specific date each year:

- > 25% in JNL/Goldman Sachs Competitive Advantage Fund;
- > 25% in JNL/Goldman Sachs Dividend Income & Growth Fund;
- ➤ 25% in JNL/Goldman Sachs Intrinsic Value Fund: and
- > 25% in JNL/Goldman Sachs Total Yield Fund.

JNL/Goldman Sachs Competitive Advantage Fund

Jackson National Asset Management, LLC (and Goldman Sachs Asset Management, L.P. and Mellon Investments Corporation)

Seeks capital appreciation by investing in the stock of anywhere from 30 to 90 distinct companies (generally ranging from 35 to 50 distinct companies) included in the S&P 500[®] Index that are believed to have superior profitability, as measured by return on invested capital, and trade at relatively attractive valuations.

JNL/Goldman Sachs Dividend Income & Growth Fund

Jackson National Asset Management, LLC (and Goldman Sachs Asset Management, L.P. and Mellon Investments Corporation)

Seeks primarily capital appreciation with secondary focus on current income by investing in the stock of 33 to 99 distinct companies (generally ranging from 35 to 50 distinct companies) included in the S&P 500[®] Index that have attractive dividend yields and strong capital structures as determined by Goldman Sachs Asset Management, L.P.

JNL/Goldman Sachs International 5 Fund

Jackson National Asset Management, LLC (and Goldman Sachs Asset Management, L.P. and Mellon Investments Corporation)

Seeks capital appreciation by investing in the common stock of foreign companies that are identified by a model strategy comprised of five underlying strategies. The Fund allocates all of its net assets in the following strategies:

- ➤ S&P Asia Pac Ex Japan Strategy
- ➤ S&P Canada Strategy
- ➤ S&P Europe Strategy
- ➤ S&P Japan Strategy
- ➤ S&P Middle East Strategy

JNL/Goldman Sachs Intrinsic Value Fund

Jackson National Asset Management, LLC (and Goldman Sachs Asset Management, L.P. and Mellon Investments Corporation)

Seeks capital appreciation by investing in the stock of 30 to 90 distinct companies (generally ranging from 45 to 60 distinct companies) included in the S&P 500[®] Index that generate strong free cash flows and sell at relatively attractive valuations.

JNL/Goldman Sachs Total Yield Fund

Jackson National Asset Management, LLC (and Goldman Sachs Asset Management, L.P. and Mellon Investments Corporation)

Seeks capital appreciation by investing in the stock of 30 to 90 distinct companies (generally ranging from 40 to 65 distinct companies) included in the S&P 500[®] Index that generate positive cash flow and have a strong track record, as determined by Goldman Sachs Asset Management, L.P. of returning cash to investors, such as through dividends, share repurchases or debt retirement.

JNL/GQG Emerging Markets Equity Fund

Jackson National Asset Management, LLC (and GQG Partners, LLC)

Seeks long-term capital appreciation by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes), in equity securities of emerging market companies.

JNL/Harris Oakmark Global Equity Fund

Jackson National Asset Management, LLC (and Harris Associates L.P.)

Seeks capital appreciation by investing, normally, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of common stocks of U.S. and non-U.S. companies. The Fund invests in the securities of companies located in at least three countries.

JNL/Heitman U.S. Focused Real Estate Fund

Jackson National Asset Management, LLC (and Heitman Real Estate Securities LLC)

Seeks to achieve long-term total return by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities issued by real estate companies operating in the United States, including real estate investment trusts ("REITs"). The Fund's investments in equity securities may include common stocks, preferred stocks, and securities offered in initial public offerings ("IPOs"). The Fund may invest in these equity securities directly or indirectly through investments in other investment companies, including exchange-traded funds ("ETFs"). The Fund defines a real estate company as any company that derives at least 50% of its revenue from, or has at least 50% of its assets in, real estate.

JNL/Invesco Diversified Dividend Fund

Jackson National Asset Management, LLC (and Invesco Advisers, Inc.)

Seeks long-term growth of capital and, secondarily, current income by investing primarily in dividend-paying equity securities. The principal type of equity security in which the Fund invests is common stock.

JNL/Invesco Global Real Estate Fund

Jackson National Asset Management, LLC (and Invesco Advisers, Inc. and sub-sub-adviser: Invesco Asset Management Limited)

Seeks high total return by investing, normally, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in securities of real estate and real estate-related companies, including real estate investment trusts and in derivatives and other instruments that have economic characteristics similar to such securities. The companies will be located in at least three different countries, including the U.S.

JNL/Invesco International Growth Fund

Jackson National Asset Management, LLC (and Invesco Advisers, Inc.)

Seeks long-term growth of capital by primarily investing in equity securities and depository receipts of foreign issuers. The Fund focuses its investments in common and preferred stock and invests, under normal circumstances in securities of companies located in at least three countries in the developed markets of Western Europe and the Pacific Basin. The Fund may also invest no more than 30% in emerging markets securities.

JNL/Invesco Small Cap Growth Fund

Jackson National Asset Management, LLC (and Invesco Advisers, Inc.)

Seeks long-term growth of capital by investing, normally, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in securities of small-capitalization companies. The Fund invests primarily in equity securities, the principal type of equity security in which the Fund invests is common stock. The Fund considers a company to be a small-capitalization company if it has a market capitalization, at the time of purchase, no larger than the largest capitalized company included in the Russell 2000[®] Index during the most recent 11-month period (based on month-end data) plus the most recent

data during the current month. The Fund may also invest up to 20% of its assets in equity securities of issuers that have market capitalizations, at the time of purchase, in other market capitalization ranges, and in investment-grade non-convertible debt securities, U.S. government securities and high quality money market instruments. The Fund may also invest up to 25% of its total assets in foreign securities.

JNL/JPMorgan Global Allocation Fund

Jackson National Asset Management, LLC (and J.P. Morgan Investment Management Inc. and Ivy Investment Management Company)

Seeks to maximize long-term total return by allocating among strategies managed by unaffiliated investment managers, Ivy Investment Management Company and J.P. Morgan Investment Management Inc.. The Fund has significant flexibility to invest in a broad range of equity, fixed income, and alternative asset classes in the U.S. and other markets throughout the world, both developed and emerging.

JNL/JPMorgan Growth & Income Fund

Jackson National Asset Management, LLC (and J.P. Morgan Investment Management Inc.)

Seeks capital growth over the long-term and to earn income from dividends by investing at least 80% of its net assets (plus the amount of borrowings for investment purposes) in common stocks. The securities held by the Fund will predominantly be of companies with market capitalizations similar to those within the universe of the MSCI USA Value Index.

JNL/JPMorgan Hedged Equity Fund

Jackson National Asset Management, LLC (and J.P. Morgan Investment Management Inc.)

Seeks to provide capital appreciation through participation in the broad equity markets while hedging overall market exposure relative to traditional long-only equity strategies. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities. The Fund uses an "enhanced index" strategy to invest in these equity securities, which primarily consist of common stocks of medium to large capitalization U.S. companies. The Fund will also systematically purchase and sell exchange-traded put options and sell exchange-traded call options, employing an options overlay known as a "put/spread collar" strategy. The options may be based on the Index or on exchange-traded funds ("ETFs") that replicate the Index ("S&P 500 ETFs").

JNL/JPMorgan MidCap Growth Fund

Jackson National Asset Management, LLC (and J.P. Morgan Investment Management Inc.)

Seeks capital growth over the long-term by investing, under normal market circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a broad portfolio of common stocks of companies with market capitalizations equal to those within the universe of Russell Midcap Growth Index stocks at the time of purchase. The Fund may also invest up to 20% of its total assets in all types of foreign securities.

JNL/JPMorgan U.S. Government & Quality Bond Fund

Jackson National Asset Management, LLC (and J.P. Morgan Investment Management Inc.)

Seeks to obtain a high level of current income by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in U.S. Treasury securities, obligations issued by agencies or instrumentalities of the U.S. government (which may not be backed by the U.S. government) and mortgage-backed securities, that are supported either by the full faith and credit of the U.S. government or their own credit, collateralized mortgage obligations issued by private issuers, and repurchase agreements related to the principal investments. The Fund may also invest in high-quality corporate debt securities.

JNL/Lazard International Strategic Equity Fund

Jackson National Asset Management, LLC (and Lazard Asset Management LLC)

Seeks long-term capital appreciation. Under normal market conditions, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities, principally common stocks, of non-U.S. companies whose principal activities are located in countries represented by the Morgan Stanley Capital International ("MSCI") Europe, Australasia and Far East ("EAFE") Index that Lazard Asset Management LLC, the Fund's sub-adviser, believes are undervalued based on their earnings, cash flow or asset values.

JNL/Loomis Sayles Global Growth Fund

Jackson National Asset Management, LLC (and Loomis, Sayles & Company, L.P.)

Seeks long-term growth of capital by investing primarily in equity securities, including common stocks and depositary receipts. The Fund will invest in securities that provide exposure to no fewer than three countries, which will include the U.S. In addition, the Fund will invest at least 40% of its assets in securities of companies that maintain their principal place of business or conduct their principal business activities outside the U.S., companies that have their securities traded on non-U.S. exchanges, or companies that have been formed under the laws of non-U.S. countries.

JNL/Lord Abbett Short Duration Income Fund

Jackson National Asset Management, LLC (and Lord, Abbett & Co. LLC)

Seeks a high level of income consistent with preservation of capital by investing primarily in various types of short-duration debt (or fixed-income) securities. Under normal conditions, the Fund seeks to achieve its investment objective by investing at least 65% of its net assets in investment-grade debt securities of various types.

JNL/Mellon Bond Index Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks to track the performance of the Bloomberg Barclays U.S. Aggregate Bond Index by investing under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in fixed-income securities. The Fund seeks to provide a moderate rate of income by investing in domestic fixed-income investments.

JNL/Mellon Communication Services Sector Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks total return through capital appreciation and dividend income by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the MSCI USA IMI Communication Services Index in proportion to their market capitalization weighting in the Index.

JNL/Mellon Consumer Discretionary Sector Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks total return through capital appreciation and dividend income by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the MSCI USA IMI Consumer Discretionary Index.

JNL/Mellon Consumer Staples Sector Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks total return through capital appreciation and dividend income. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the MSCI USA IMI Consumer Staples Index in proportion to their market capitalization weighting in the Index. The Fund may concentrate in certain industries in the consumer staples sector to the extent such industries are represented in the Index.

JNL/Mellon DowSM Index Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks total return through a combination of capital appreciation and dividend income by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the thirty securities which comprise the Dow Jones Industrial Average ("DJIA"), with the weight of each security in the Fund substantially corresponding to the weight of such security in the DJIA.

JNL/Mellon Emerging Markets Index Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks to track the performance of a benchmark index that measures the investment return of stocks issued by companies located in emerging market countries. The Fund invests, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in stocks included in the MSCI Emerging Markets Index, including depositary receipts representing securities of the Index.

JNL/Mellon Energy Sector Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks total return through capital appreciation and dividend income by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the MSCI USA IMI Energy Index in proportion to their market capitalization weighting in the Index.

JNL/Mellon Equity Income Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks total return (consisting of capital appreciation and income). Under normal market conditions, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities. The Fund seeks to focus on dividend-paying stocks and other investments and investment techniques that provide income, including covered call strategies.

JNL/Mellon Financial Sector Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks total return through capital appreciation and dividend income by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the securities in the MSCI USA IMI Financials Index in proportion to their market capitalization weighting in the Index.

JNL/Mellon Healthcare Sector Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks total return through capital appreciation and dividend income by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the securities in the MSCI USA IMI Health Care Index in proportion to their market capitalization weighting in the Index.

JNL/Mellon Index 5 Fund

Jackson National Asset Management, LLC

Seeks capital appreciation by investing in Class I shares of the following Underlying Funds:

- > 20% in the JNL/Mellon S&P 500 Index Fund;
- > 20% in the JNL/Mellon S&P 400 MidCap Index Fund;
- > 20% in the JNL/Mellon Small Cap Index Fund;
- > 20% in the JNL/Mellon International Index Fund; and
- ➤ 20% in the JNL/Mellon Bond Index Fund.

JNL/Mellon Industrials Sector Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks total return through capital appreciation and dividend income. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the MSCI USA IMI Industrials Index in proportion to their market capitalization weighting in the Index. The Fund may concentrate in certain industries in the industrials sector to the extent such industries are represented in the Index.

JNL/Mellon Information Technology Sector Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks total return through capital appreciation and dividend income by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the MSCI USA IMI Information Technology Index in proportion to their market capitalization weighting in the Index.

JNL/Mellon International Index Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks to track the performance of the MSCI Europe Australasia Far East ("MSCI EAFE") Index. The Fund invests in international equity securities attempting to match the characteristics of each country within the Index. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the Index or derivative securities economically related to the Index in order to provide long-term capital growth.

JNL/Mellon Materials Sector Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks total return through capital appreciation and dividend income. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the MSCI USA IMI Materials Index in proportion to their market capitalization weighting in the Index. The Fund may concentrate in certain industries in the materials sector to the extent such industries are represented in the Index.

JNL/Mellon MSCI KLD 400 Social Index Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks to track the investment results of the MSCI KLD 400 Social Index, which is a free float-adjusted market capitalization index designed to target U.S. companies that have positive environmental, social and governance characteristics.

JNL/Mellon MSCI World Index Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks to track the performance of the MSCI World Index. The Fund is constructed to mirror the index to provide long-term capital growth by investing in international equity securities attempting to track the characteristics of each country within the Index. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the MSCI World Index or derivative securities economically related to the MSCI World Index.

JNL/Mellon Nasdaq® 100 Index Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks total return by investing in the securities which comprise the NASDAQ 100 Index[®]. The Fund seeks to invest under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the Index in proportion to their market capitalization weighting in the Index.

JNL/Mellon Real Estate Sector Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks total return through capital appreciation and dividend income. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the MSCI USA IMI Real Estate Index in proportion to their market capitalization weighting in the Index. The Fund may concentrate in certain industries in the real estate sector to the extent such industries are represented in the Index.

JNL/Mellon S&P 400 MidCap Index Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks to track the performance of the S&P MidCap 400 Index. The Fund invests in equity securities of medium capitalization-weighted domestic corporations. Under normal circumstances the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the Index in proportion to their market capitalization weighting in the Index in order to provide long-term capital growth.

JNL/Mellon S&P 500 Index Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks to track the performance of the S&P 500[®] Index. The Fund seeks to invest under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the S&P 500 Index in proportion to their market capitalization weighting in the Index in order to provide long-term capital growth.

JNL/Mellon Small Cap Index Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks to track the performance of the S&P SmallCap 600 Index and provide long-term growth of capital by investing in equity securities of small- to mid-size domestic companies. The Fund, under normal circumstances, invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the Index in proportion to their market capitalization weighting in the Index.

JNL/Mellon Utilities Sector Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks total return through capital appreciation and dividend income by investing, under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the MSCI USA IMI Utilities Index in proportion to their market capitalization weighting in the Index.

JNL/MFS Mid Cap Value Fund

Jackson National Asset Management, LLC (and Massachusetts Financial Services Company d/b/a MFS Investment Management)

Seeks capital appreciation by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in issuers with medium market capitalizations. The Fund normally invests its assets primarily in equity securities. Equity securities include common stocks, equity interests in real estate investment trusts ("REITs"), and other securities that represent an ownership interest (or right to acquire an ownership interest) in a company or other issuer.

JNL/Morningstar Wide Moat Index Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks to provide total return by tracking the performance, net of expenses, of the Morningstar® Wide Moat Focus Index SM. The Fund will invest, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the securities in the Index. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index.

JNL/Neuberger Berman Commodity Strategy Fund

Jackson National Asset Management, LLC (and Neuberger Berman Investment Advisers LLC)

Seeks total return by investing under normal circumstances in commodity-linked derivative instruments and fixed-income instruments. Commodities are assets that have tangible properties, such as oil, natural gas, agricultural products or metals. The Fund seeks to gain long and short exposure to the commodity markets by investing, directly or indirectly, in futures contracts on individual commodities and other commodity-linked derivative instruments.

JNL/Neuberger Berman Strategic Income Fund

Jackson National Asset Management, LLC (and Neuberger Berman Investment Advisers LLC)

Seeks high current income with long-term capital appreciation as its secondary objective by investing primarily in a diversified mix of fixed rate and floating rate debt securities. The Fund's investments may include securities issued by domestic and foreign governments, corporate entities, and trust structures. The Fund may invest in a broad array of securities, including: securities issued or guaranteed as to principal or interest by the U.S. government or any of its agencies or instrumentalities; corporate bonds; commercial paper; currencies and non-U.S. securities; mortgage-backed securities and other asset-backed securities; and loans.

JNL/PIMCO Income Fund

Jackson National Asset Management, LLC (and Pacific Investment Management Company LLC)

Seeks to maximize current income, with long-term capital appreciation as a secondary objective, by investing, under normal circumstances, at least 65% of its total assets in a multi-sector portfolio of Fixed-Income Instruments of varying maturities, which may be represented by forwards or derivatives such as options, futures contracts or swap agreements.

JNL/PIMCO Investment Grade Credit Bond Fund

Jackson National Asset Management, LLC (and Pacific Investment Management Company LLC)

Seeks maximum total return, consistent with preservation of capital and prudent investment management by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of investment grade fixed-income securities of varying maturities, which may be represented by forwards, repurchase agreements, reverse repurchase agreements or loan participations and assignments or derivatives such as options, futures contracts or swap agreements.

JNL/PIMCO Real Return Fund

Jackson National Asset Management, LLC (and Pacific Investment Management Company LLC)

Seeks maximum real return, consistent with preservation of real capital and prudent investment management. The Fund invests, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in inflation-indexed bonds of varying maturities issued by the U.S. and non-U.S. governments, their agencies or instrumentalities, and corporations. Assets not invested in inflation-indexed bonds may be invested in other types of fixed-income instruments, which include bonds, debt securities, and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities.

JNL/PPM America Floating Rate Income Fund

Jackson National Asset Management, LLC (and PPM America, Inc.)

Seeks to provide a high level of current income by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in income-producing floating rate instruments, including

floating rate loans, floating rate notes, other floating rate debt securities, structured products, (including, commercial mortgage-backed securities, asset-backed securities, and collateralized loan obligations which are debt securities typically issued by special purpose vehicles and secured by loans), and repurchase agreements.

JNL/PPM America High Yield Bond Fund

Jackson National Asset Management, LLC (and PPM America, Inc.)

Seeks to maximize current income, with capital appreciation as a secondary objective, by investing, under normal circumstances, at least 80% of its assets in (net assets plus the amount of any borrowings made for investment purposes) high-yield, high-risk debt securities ("junk bonds") and related investments that are rated below investment grade (i.e., rated below BBB- or Baa3) by at least major credit rating agency, or, if not rated by any credit rating agency, determined to be below investment-grade quality. The Fund may also invest 35% of its total assets in securities of foreign issuers. To the extent that the Fund invests in emerging market debt rated below BBB- or Baa3 by at least major credit rating agency, or, if not rated by any credit rating agency, determined to be below investment-grade quality, this will be considered as an investment in a high-yield security for purposes of the 80% investment minimum requirement.

JNL/PPM America Total Return Fund

Jackson National Asset Management, LLC (and PPM America, Inc.)

Seeks to realize maximum total return, consistent with the preservation of capital and prudent investment management. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of fixed-income investments of U.S. and foreign issuers such as government, corporate, mortgage- and other asset-backed securities and cash equivalents. The Fund may also invest in derivative instruments.

JNL/RAFI® Fundamental Asia Developed Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks to track the performance of the RAFI® Fundamental Asia Developed Index by investing under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the component securities of the Index. The Fund may invest the remainder of its assets in cash, securities, and instruments that are not component securities but which the Sub-Adviser believes will help the Fund track its Index.

JNL/RAFI® Fundamental Europe Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks to track the performance of the RAFI® Fundamental Europe Index by investing under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the component securities of the Index. The Fund may invest the remainder of its assets in cash, securities, and instruments that are not component securities but which the Sub-Adviser believes will help the Fund track its Index.

JNL/RAFI® Fundamental U.S. Small Cap Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks to track the performance of the RAFI® Fundamental U.S. Small Company Index by investing under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the component securities of the Index. The Fund may invest the remainder of its assets in cash, securities, and instruments that are not component securities but which the Sub-Adviser believes will help the Fund track its Index.

JNL/RAFI® Multi-Factor U.S. Equity Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks to track the performance of the RAFI® Multi-Factor U.S. Index by investing under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the component securities of the Index. The Fund may invest the remainder of its assets in cash, securities, and instruments that are not component securities but which the Sub-Adviser believes will help the Fund track its Index.

JNL/T. Rowe Price Balanced Fund

Jackson National Asset Management, LLC (and T. Rowe Price Associates, Inc.)

Seeks capital growth, current income, and preservation of capital through a portfolio of stocks and fixed-income securities by investing approximately 65% of its total assets in common stocks and 35% in fixed income securities. The Fund will invest at least 25% of its total assets in fixed income senior securities and may invest up to 35% of its total assets in foreign securities.

The Fund has significant flexibility to invest in a broad range of equity, fixed income, and alternative asset classes in the U.S. and other markets throughout the world, both developed and emerging.

JNL/T. Rowe Price Capital Appreciation Fund

Jackson National Asset Management, LLC (and T. Rowe Price Associates, Inc.)

Seeks long-term capital appreciation by investing primarily in common stocks. The Fund may also hold fixed income and other securities to help preserve principal value. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 50% of its total assets in common stocks. The remaining assets are generally invested in convertible securities, corporate and government debt, bank loans (which represent an interest in amounts owed by a borrower to a syndicate of lenders), and foreign securities, in keeping with the Fund's objective. The Fund has significant flexibility to invest in a broad range of equity and fixed income securities. The Fund may invest up to 25% of its total assets in foreign securities.

JNL/T. Rowe Price Established Growth Fund

Jackson National Asset Management, LLC (and T. Rowe Price Associates, Inc.)

Seeks long-term growth of capital by investing generally in common stocks of large-capitalization companies. The Sub-Adviser generally seeks investments in stocks of large-capitalization companies, which the Sub-Adviser defines as a company whose market capitalization is larger than the median market capitalization of companies in the Russell 1000 Growth Index, and that has one or more of the following characteristics: strong cash flow and an above-average rate of earnings growth; the ability to sustain earnings momentum during economic downturns; and occupation of a lucrative niche in the economy and the ability to expand even during times of slow economic growth. While the Fund invests principally in U.S. common stocks, other securities may also be purchased, including foreign stocks, futures and options.

JNL/T. Rowe Price Short-Term Bond Fund

Jackson National Asset Management, LLC (and T. Rowe Price Associates, Inc.)

Seeks a high level of income consistent with minimal fluctuation in principal value and liquidity by investing in a diversified portfolio of short- and intermediate-term investment-grade corporate, government, and mortgage-backed securities. The Fund may also invest in money market securities, bank obligations, collateralized mortgage obligations, and foreign securities, including securities in emerging markets. Normally, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in bonds. The Fund will only purchase securities that are rated within one of the four highest credit categories (e.g. AAA, AA, A, BBB, or equivalent) at the time of purchase by at least one major credit rating agency or, if unrated, deemed to be of comparable quality by the Sub-Adviser.

JNL/T. Rowe Price U.S. High Yield Fund

Jackson National Asset Management, LLC (and T. Rowe Price Associates, Inc.)

Seeks total return, with a secondary objective of current income by investing at least 80% of its net assets (including any borrowings for investment purposes) in U.S. high yield instruments (commonly referred to as "junk" bonds), which are debt instruments that are, at the time of purchase, rated below investment grade by a credit rating agency, or, if not rated by any major credit rating agency, deemed to be below investment grade by the Sub-Adviser.

JNL/T. Rowe Price Value Fund

Jackson National Asset Management, LLC (and T. Rowe Price Associates, Inc.)

Seeks long-term capital appreciation by investing, via a value approach investment selection process, at least 65% of total assets in common stocks believed to be undervalued. Stock holdings are expected to consist primarily of large-company stocks, but may also include mid-cap and small-cap companies. The Fund may invest up to 25% of its total assets (excluding reserves) in foreign securities, including securities that are economically tied to emerging markets. Income is a secondary objective.

JNL/Vanguard Global Bond Market Index Fund

Jackson National Asset Management, LLC

Seeks a balance between current income and growth of capital by investing in shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the Vanguard Sector Bond Index Funds, Vanguard Bond Index Funds, and Vanguard Total International Bond Index Fund.

JNL/Vanguard Growth ETF Allocation Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks long-term growth of capital through investment in exchange-traded funds ("Underlying ETFs"). Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets

plus the amount of any borrowings made for investment purposes) in a diversified group of Underlying ETFs. Under normal market conditions, the Adviser allocates approximately 70% to 90% (with a target allocation of 80%) of the Fund's assets to Underlying ETFs that invest primarily in equity securities and 10% to 30% (with a target allocation of 20%) of the Fund's assets to Underlying ETFs that invest primarily in fixed income securities and/or cash alternatives.

JNL/Vanguard International Stock Market Index Fund

Jackson National Asset Management, LLC

Seeks long-term capital appreciation by investing in shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the Vanguard FTSE All-World ex-US Index Fund, FTSE All-World ex-US Small-Cap Index Fund, Vanguard International Stock Index Funds, Vanguard Developed Markets Index Fund and Vanguard Total International Stock Index Fund.

JNL/Vanguard Moderate ETF Allocation Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks long-term growth of capital through investment in exchange-traded funds ("Underlying ETFs"). Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified group of Underlying ETFs. Under normal market conditions, the Adviser allocates approximately 30% to 50% (with a target allocation of 40%) of the Fund's assets to Underlying ETFs that invest primarily in equity securities and 50% to 70% (with a target allocation of 60%) of the Fund's assets to Underlying ETFs that invest primarily in fixed income securities and/or cash alternatives.

JNL/Vanguard Moderate Growth ETF Allocation Fund

Jackson National Asset Management, LLC (and Mellon Investments Corporation)

Seeks long-term growth of capital through investment in exchange-traded funds ("Underlying ETFs"). Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified group of Underlying ETFs. Under normal market conditions, the Adviser allocates approximately 50% to 70% (with a target allocation of 60%) of the Fund's assets to Underlying ETFs that invest primarily in equity securities and 30% to 50% (with a target allocation of 40%) of the Fund's assets to Underlying ETFs that invest primarily in fixed income securities and/or cash alternatives.

JNL/Vanguard U.S. Stock Market Index Fund

Jackson National Asset Management, LLC

Seeks long-term capital appreciation by investing in Institutional Class shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the Vanguard U.S. Stock Index Large-Capitalization Funds, the Vanguard U.S. Stock Index Small-Capitalization Funds and Vanguard U.S. Stock Index Mid-Capitalization Funds.

JNL/WCM Focused International Equity Fund

Jackson National Asset Management, LLC (and WCM Investment Management, LLC)

Seeks long-term capital appreciation by investing primarily in companies outside the United States. The Fund, under normal circumstances, invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities. The Fund invests primarily in equity securities or depositary receipts of non-U.S. domiciled companies located in developed countries, but may also invest in emerging markets and less developed countries.

JNL/Westchester Capital Event Driven Fund

Jackson National Asset Management, LLC (and Westchester Capital Management, LLC)

Seeks to provide attractive risk-adjusted returns with low relative volatility in virtually all market environments. The Fund primarily employs investment strategies designed to capture price movements generated by specific events including, but not limited to, securities of companies involved in mergers, acquisitions, asset sales or other divestitures, restructurings, refinancings, recapitalizations, reorganizations or other special situations.

JNL/WMC Balanced Fund

Jackson National Asset Management, LLC (and Wellington Management Company LLP)

Seeks reasonable income and long-term capital growth by investing primarily in a diversified portfolio of common stocks and investment grade fixed-income securities. The Fund may invest in any type or class of security. The anticipated mix of the Fund's holdings is typically 60-70% of its assets in equities and 30-40% in fixed-income securities, including investment-grade

corporate bonds, U.S. Treasury and government agency bonds, mortgage-backed securities, asset-backed securities, and commercial-backed securities. Cash and cash equivalents are included in the fixed income fund weighting.

JNL/WMC Government Money Market Fund

Jackson National Asset Management, LLC (and Wellington Management Company LLP)

Seeks to achieve as high a level of current income as is consistent with the preservation of capital and maintenance of liquidity by investing in, under normal circumstances, at least 99.5% of its total assets in cash, U.S. Government securities, and/or repurchase agreements that are "collateralized fully" (i.e., collateralized by cash or government securities).

The investment objectives and policies of certain Funds are similar to the investment objectives and policies of other mutual funds that the Fund's investment sub-advisers also manage. Although the objectives and policies may be similar, the investment results of the Funds may be higher or lower than the results of those other mutual funds. We cannot guarantee, and make no representation, that the investment results of similar funds will be comparable even though the funds have the same investment sub-advisers. The Funds described are available only through variable annuity contracts issued by Jackson. They are NOT offered or made available to the general public directly.

A Fund's performance may be affected by risks specific to certain types of investments, such as foreign securities, derivative investments, non-investment grade debt securities, initial public offerings (IPOs) or companies with relatively small market capitalizations. IPOs and other investment techniques may have a magnified performance impact on a Fund with a small asset base. A Fund may not experience similar performance as its assets grow.

All of the Funds are managed and administered by Jackson National Asset Management, LLC ("JNAM"), an affiliate of Jackson. For certain Funds, JNAM has entered into sub-advisory agreements with one or more other investment advisers (the "sub-advisers") to provide certain investment advisory services to the Funds. Among other responsibilities, JNAM oversees the activities of the sub-advisers with respect to such Funds and is responsible for evaluating the services of those sub-advisers. In addition, for the Funds of Funds and feeder funds, JNAM implements the investment program by, among other things, selecting the respective Underlying Funds, ETFs and master funds.

We generally select the Funds to provide a range of investment options for persons invested in the Contracts from conservative to more aggressive investment strategies. In addition, we may consider the potential risk to us of offering a Fund in light of the benefits provided by the Contract. We and our affiliates receive payments or compensation from the Funds or their service providers in connection with management, administration, distribution, and other services we and our affiliates provide with respect to the Funds. These payments to Jackson and our affiliates may be a factor we consider in our selection of the Funds.

Subject to any applicable legal requirements, selection of the Funds is solely within our discretion, based on the foregoing or other considerations.

We do not provide investment advice, and we do not recommend or endorse any particular Investment Division or Fund. You bear the risk of any decline in your Contract Value resulting from the performance of the Investment Divisions you have chosen.

You should read the summary prospectuses for the Funds and/or the prospectus for the JNL Series Trust carefully before investing.

The summary prospectuses for the Funds are attached to this prospectus. The summary prospectuses for the Funds and prospectus for the JNL Series Trust may also be obtained at no charge by calling 1-800-644-4565 (Service Center), by writing P.O. Box 24068, Lansing, Michigan 48909-4068, or by visiting www.jackson.com. Additional Funds and Investment Divisions may be available in the future.

Voting Privileges. To the extent required by law, we will obtain instructions from you and other Owners about how to vote our shares of a Fund when there is a vote of shareholders of a Fund. We will vote all the shares we own in proportion to those instructions from Owners. An effect of this proportional voting is that a relatively small number of Owners may determine the outcome of a vote.

Substitution. We reserve the right to substitute a different Fund or a different mutual fund for the one in which any Investment Division is currently invested, or transfer money to the General Account. We will not do this without any required approval of the SEC. We will give you notice of any substitution.

CONTRACT CHARGES

There are charges associated with your Contract, the deduction of which will reduce the investment return of your Contract. Charges are deducted proportionally from your Contract Value. Some of these charges are for add-on benefits, as noted, so they are deducted from your Contract Value only if you elected to add that add-on benefit to your Contract. These charges may be a lesser amount where required by state law or as described below, but will not be increased. We expect to profit from certain charges assessed under the Contract. These charges (and certain other expenses) are as follows:

Core Contract Charge. Each day, as part of our calculation of the Accumulation Unit values and Annuity Units, we make a deduction for the Core Contract Charge. On an annual basis, this charge equals **1.00%** of the average daily net asset value of your allocations to the Investment Divisions. This charge does not apply to the Fixed Account.

This charge is reduced to 0.85% if the Contract Value on the later of the Issue Date or the most recent Contract Quarterly Anniversary is greater than or equal to \$1 million. If your Contract Value subsequently drops below \$1 million on the most recent Contract Quarterly Anniversary, the charge will be reinstated to 1.00%.

This charge compensates us for our expenses associated with administration of the Contracts and the Separate Account, acquisition of business including marketing expenses, risks we assume in connection with the Contracts, and costs associated with providing Contract benefits.

Annual Contract Maintenance Charge. During the accumulation phase, we deduct a \$50 annual contract maintenance charge on the Contract Anniversary of the Issue Date. We will also deduct the annual contract maintenance charge if you make a total withdrawal. This charge is for administrative expenses in addition to those covered by the Core Contract Charge. The annual contract maintenance charge will be assessed on the Contract Anniversary or upon total withdrawal and generally is taken from the Investment Divisions and the Fixed Account based on the proportion their respective value bears to the Contract Value. We will not deduct this charge if the value of your Contract is \$50,000 or more when the deduction is to be made.

Transfer Charge. We deduct \$25 for each transfer in excess of 25 in a Contract Year. For this purpose, all transfers that are processed on the same Business Day will be considered as one transfer. This charge is deducted from the amount that is transferred prior to the allocation to a different Investment Division or the Fixed Account, as applicable. The charge compensates us for the administrative cost associated with the transfers. We waive the transfer charge in connection with Dollar Cost Averaging, Earnings Sweep, Rebalancing transfers and any transfers we require, and we will charge a lesser fee where required by state law. For information on the Dollar Cost Averaging, Earnings Sweep and Rebalancing programs please see the applicable section under "OTHER INFORMATION" beginning on page 54.

Withdrawal Charge (not applicable for Contracts with the Liquidity Option). At any time during the accumulation phase (if and to the extent that Contract Value is sufficient to pay any remaining withdrawal charges that remain after a withdrawal), you may withdraw the following with no withdrawal charge:

- **Premiums that are no longer subject to a withdrawal charge** (Premiums in your annuity for at least five years without being withdrawn),
- **earnings** (excess of your Contract Value allocated to the Investment Divisions and the Fixed Account over your Remaining Premiums allocated to those accounts), *and*
- the **free withdrawal** amount. The free withdrawal is equal to **10% of Remaining Premium** during each Contract Year that would otherwise incur a withdrawal charge, *minus* earnings. The free withdrawal may be taken once or in segments throughout the Contract Year. Any amount withdrawn to satisfy a Required Minimum Distribution reduces the amount of available free withdrawal.

We will deduct a withdrawal charge on:

- withdrawals in excess of the free withdrawal amount (the withdrawal charge is imposed only
 on the excess amount above the free withdrawal amount).
- withdrawals under a Contract that exceed its Required Minimum Distribution under the Internal Revenue Code (the entire amount withdrawn to fulfill your withdrawal request,

including amounts necessary to pay withdrawal charges, will be subject to the withdrawal charge), and

 amounts withdrawn in a total withdrawal, including amounts necessary to pay withdrawal charges.

For purposes of the withdrawal charge, we treat withdrawals as coming first from earnings (which may be withdrawn free of any withdrawal charge), and then from the oldest Remaining Premium. If you request a total withdrawal, or elect to commence income payments within one year of the date your Contract was issued, the withdrawal charge is based on Remaining Premium in the Contract immediately prior to the withdrawal. Please note, any free withdrawal taken reduces both Contract Value and Remaining Premium.

The amount of the withdrawal charge deducted varies according to the following schedule (state variations may apply):

Withdrawal Charge (as a percentage of Remaining Premium):

Completed Years since Receipt of Premium	0-1	1-2	2-3	3-4	4-5	5+
	6.5%	6.0%	5.0%	4.0%	3.0%	0%

Upon a partial or total withdrawal, the withdrawal charge percentage will be the lesser of the withdrawal charge percentage indicated above, or the maximum withdrawal charge percentage listed below. In either case, the withdrawal charge percentage will decrease with each year until no longer applicable.

Beginning on the Contract Anniversary on or After the Owner Attains the Age of:	Maximum Withdrawal Charge Percentage
88	5.50%
89	4.50%
90	3.75%
91	2.75%
92	1.75%
93	0.75%
94+	0.00%

You may request a partial withdrawal as either a gross amount withdrawal or a net amount withdrawal. Your selection will have an impact on both the amount you receive and the amount of the withdrawal charge assessed on your partial withdrawal.

If you elect to receive a gross amount withdrawal, your Contract Value will be reduced by your requested withdrawal amount. Any applicable charges and adjustments, including withdrawal charges and taxes will be applied to your requested withdrawal amount and the remaining amount after deductions will be distributed to you. Therefore, you may receive less than the dollar amount you specified in your withdrawal request. If you elect to receive a net amount withdrawal, your Contract Value will be reduced by your requested withdrawal amount plus the amount needed to cover any applicable charges and adjustments, including withdrawal charges and taxes withheld. Therefore, you will receive exactly the amount specified in your withdrawal request, but your Contract Value may be reduced by more than the amount of that request. In each case, withdrawal charges, if any, will be assessed against the amount by which your Remaining Premium is reduced (excluding any amount for which the Contract expressly provides for waived or no withdrawal charges). A partial withdrawal will reduce Remaining Premium by the amount of Premium withdrawn that incurs a withdrawal charge (inclusive of the withdrawal charge amount) plus the amount of Premium withdrawn that is no longer subject to a withdrawal charge.

Note: Withdrawals under a non-qualified Contract will be taxable on an "income first" basis. This means that any withdrawal from a non-qualified Contract that does not exceed the accumulated income under the Contract will be taxable in full. Any withdrawals under a tax-qualified Contract will be taxable except to the extent that they are allocable to an investment in the Contract (any after-tax contributions). In most cases, there will be little or no investment in the Contract for a tax-qualified Contract because contributions will have been made on a pre-tax or tax-deductible basis.

We do not assess the withdrawal charge on any amounts paid out as:

• income payments during your Contract's income phase (but the withdrawal charge is deducted at the Income Date if income payments are commenced in the first Contract Year);

- death benefits; or
- withdrawals necessary to satisfy the Required Minimum Distribution of the Internal Revenue Code (but if the withdrawal requested exceeds the Required Minimum Distribution, then the entire amount withdrawn to fulfill your withdrawal request will be subject to the withdrawal charge).

We may reduce or eliminate the amount of the withdrawal charge when the Contract is sold under circumstances that reduce our sales expense. Some examples are the purchase of a Contract by a large group of individuals or an existing relationship between us and a prospective purchaser. We may not deduct a withdrawal charge under a Contract issued to an officer, director, representative or employee of Jackson or any of our affiliates.

Liquidity Option Charge. If you select the Liquidity Option, which provides for no withdrawal charges, you will pay 0.25% on an annual basis of the average daily Contract Value in the Investment Divisions regardless of whether you take any withdrawals. Charges are deducted daily as part of the calculation of the Accumulation Unit values. We stop deducting this charge on the date you annuitize.

Death Benefit Charges. There is no additional charge for the Contract's basic death benefit. However, for an additional charge, you may select the Contract's add-on Return of Premium Guaranteed Minimum Death Benefit in place of the basic death benefit. Please ask your financial professional whether there are variations on this benefit in your state or contact our Service Center. Our contact information is on the cover page of this prospectus.

Return of Premium Guaranteed Minimum Death Benefit Charge. If you select the Return of Premium Guaranteed Minimum Death Benefit, you will pay 0.20% of the Contract Value for this benefit annually (0.05% each Contract Quarter), subject to a maximum annual charge of 0.40% (0.10% quarterly). We deduct the charge from your Contract Value. If the Fixed Account Contract Value is greater than the Fixed Account Minimum Value, the quarterly charge will be deducted from your allocations to the Investment Divisions and the Fixed Account Contract Value has been reduced to the Fixed Account Minimum Value. If the Fixed Account Contract Value is equal to the Fixed Account Minimum Value, the charge will be deducted only from your allocations to the Investment Divisions. If no value remains in the Investment Divisions and the Fixed Account Contract Value is equal to the Fixed Account Minimum Value, the charge will not be assessed for that Contract Quarter. With the Investment Divisions, we deduct the charge by canceling Accumulation Units rather than as part of the calculation to determine Accumulation Unit Value. Upon termination of the endorsement, the charge is prorated for the period since the last quarterly charge.

On each fifth Contract Anniversary, we reserve the right to increase the charge percentage by 0.05% annually (0.0125% each Contract Quarter), subject to the maximum annual charge noted above. If the GMDB charge is to increase, a notice will be sent to you 45 days prior to the Contract Anniversary. You may then elect to opt out of the current charge increase and any future charge increases. If you elect to opt out of charge increases, no future Premium payments will be allowed. While electing to discontinue future Premium payments will prevent an increase in charge, you will be foregoing possible increases in your GMDB so carefully consider this decision should we notify you of a charge increase. Such election is final. All elections must be received by us in Good Order prior to the Contract Anniversary.

For more information about how the add-on benefit works, including this benefit's GMDB Benefit Base, please see "Return of Premium Guaranteed Minimum Death Benefit" under "Death Benefit", beginning on page 48.

Commutation Fee. If you make a total withdrawal from your Contract after income payments have commenced under options 3 or 4 (see "Income Options"), the amount received will be reduced by (a) minus (b) where:

- (a) = the present value of the remaining income payments (as of the date of calculation) for the period for which payments are guaranteed to be made, discounted at the rate assumed in calculating the initial payment; and
- (b) = the present value of the remaining income payments (as of the date of calculation) for the period for which payments are guaranteed to be made, discounted at a rate no more than 1.00% higher than the rate used in (a).

The Commutation Fee compensates us for administrative costs and expenses associated with commuting the annuity payments and determining the amount to be paid.

Other Expenses. We pay the operating expenses of the Separate Account, including those not covered by the Core Contract Charge. There are deductions from and expenses paid out of the assets of the Funds. These expenses are described in the attached summary prospectus for the Funds. For more information, please see the "Total Annual Fund Operating Expenses" table beginning on page 5.

Premium Taxes. Some states and other governmental entities charge Premium taxes or other similar taxes. We pay these taxes and may make a deduction from your Contract Values for them. Premium taxes generally range from 0% to 3.5% (the amount of state Premium tax, if any, will vary from state to state).

Income Taxes. We reserve the right, when calculating unit values, to deduct a credit or charge with respect to any taxes we have paid or reserved for during the valuation period that we determine to be attributable to the operation of the Separate Account, or to a particular Investment Division. No federal income taxes are applicable under present law and we are not presently making any such deduction.

DISTRIBUTION OF CONTRACTS

Jackson National Life Distributors LLC ("Distributor"), located at 300 Innovation Drive, Franklin, Tennessee 37067, serves as the distributor of the Contracts. Distributor also serves as distributor of other variable insurance products issued by Jackson and its subsidiary, Jackson National Life Insurance Company of New York ("Jackson of NY").

Distributor is a wholly owned subsidiary of Jackson. Distributor is registered as a broker-dealer with the Securities and Exchange Commission under the Securities Exchange Act of 1934 and is a member of the Financial Industry Regulatory Authority ("FINRA"). Distributor is not a member of the Securities Investor Protection Corporation ("SIPC"). For more information on broker-dealers and their registered representatives, you may use the FINRA BrokerCheck program via telephone (1-800-289-9999) or the Internet (http://brokercheck.finra.org).

The Contracts are offered to customers of various financial institutions, brokerage firms and their affiliate insurance agencies (each a "Financial Institution," collectively "Financial Institutions"). No Financial Institution has any legal responsibility to pay amounts that are owed under the Contracts. The obligations and guarantees under the Contracts are the sole responsibility of Jackson. The Financial Institutions are responsible for delivery of various related disclosure documents and the accuracy of their oral description and suitable recommendation of the purchase of the Contracts.

Commissions are paid to Financial Institutions that sell the Contracts. While commissions may vary, they are not expected to exceed 6% of any Premium payment. Where lower commissions are paid up front, trail commissions may also be paid. Commissions may also be paid on the Income Date if the annuity option selected involves a life contingency or a payout over a period of ten or more years. The Financial Institutions determine the amount of the commission that will be paid to their registered representatives. The amounts paid may vary based upon the practices of each Financial Institution.

Under certain circumstances, the Distributor and/or Jackson may make payments to Financial Institutions in addition to commissions, in connection with the sale of Jackson and Jackson of NY variable insurance products. These payments and/or reimbursements are in recognition of marketing, distribution, and/or administrative support provided by the Financial Institution and may not be offered to all Financial Institutions. The terms of these arrangements vary widely depending on, among other things, products offered; the level and type of marketing, distribution, and administrative support services provided; assets under management; the volume of sales; and the level of access we are provided to the registered representatives of the Financial Institution. Such payments may influence Financial Institutions and/or their registered representatives to present the Contracts more favorably than other investment alternatives. Such compensation is subject to applicable state insurance law and regulation, FINRA rules of conduct and Department of Labor ("DOL") rules and regulations. While such compensation may be significant, it will not result in any additional direct charge by us to you.

Under these compensation structures, the Distributor and/or Jackson may make marketing allowance payments and marketing support payments to the Financial Institutions. Marketing allowance payments are payments that are designed as consideration for product placement and distribution, assets under management, and sales volume. Marketing allowance payments are generally based on a fixed percentage of annual product sales and generally range from 10 to 50 basis points (0.10% to 0.50%). Payments may also be based on a percentage of assets under management or paid as a specified dollar amount. Marketing support payments may be in the form of cash and/or non-cash compensation to or on behalf of Financial Institutions and their registered representatives and are intended to provide us with exposure to registered representatives so that we may build relationships or educate them about product features and benefits. Examples of such payments include, but are not limited to, reimbursements for representative training or "due diligence" meetings (including travel and lodging expenses); client and prospecting events; speaker fees; business development and educational enhancement items (such as software packages containing information for broker use, or prospecting lists); sponsorship

payments for participation at conferences and meetings; and other support services, including payments to third party vendors for such services. Payments or reimbursements for meetings and seminars are generally based on the anticipated level of participation and/or accessibility and the size of the audience. Subject to applicable laws and regulations including FINRA rules of conduct and DOL rules and regulations, we may also provide cash and/or non-cash compensation to registered representatives in the form of gifts, promotional items, occasional meals, and entertainment. Registered representatives may qualify for different levels of sales and service support depending on the volume of business that they do with us.

We may use any of our corporate assets to cover the cost of distribution, including any profit from the Contract's mortality and expense risk charge and other charges.

The alphabetical listing below details the 20 Financial Institutions that received the largest amounts of marketing allowance payments and/or marketing support payments in 2019 from the Distributor and/or Jackson in relation to the sale of Jackson and Jackson of NY variable insurance products. The total payments received by a Financial Institution is based on sales of all Jackson and Jackson of NY variable insurance products, thus a Financial Institution may appear on the list even if it is not receiving any payments with respect to sales of the Contracts. Payments to these firms ranged from approximately \$475 thousand to approximately \$18.5 million.

Cambridge Investment Research, Inc. Cetera Advisor Networks LLC Cetera Advisors LLC Cetera Investment Services LLC Commonwealth Financial Network Kestra Investment Services, LLC Lincoln Financial Advisors LPL Financial LLC MML Investors Services, LLC Morgan Stanley Park Avenue Securities LLC Raymond James & Associates, Inc. Royal Alliance Associates, Inc. Securities America, Inc. Stifel Nicolaus & Company, Incorporated Transamerica Financial Advisors, Inc. UBS Financial Services, Inc. Voya Financial Advisors, Inc. Wells Fargo Clearing Services, LLC Woodbury Financial Services, Inc.

Please see Appendix B for a complete list of Financial Institutions that received amounts of marketing allowance payments and/or marketing support payments in 2019 from the Distributor and/or Jackson in relation to the sale of our variable insurance products. While we endeavor to update this list on an annual basis, please note that interim changes or new arrangements may not be listed and may involve substantial payments on a forward going basis.

Compensation is also paid to employees of the Distributor and/or Jackson who are responsible for providing services to Financial Institutions. These employees are generally referred to as "wholesalers" and may meet with Financial Institutions and/or their registered representatives to provide training and sales support. The compensation paid to the wholesalers may vary based on a number of factors, including Premium payments; types of Contracts or add-on benefits (if any) sold by the Financial Institutions that the wholesaler services; wholesaler performance; and overall company performance. The wholesaler may be required to achieve internally-assigned goals related to the same type of factors and may receive bonus payments for the achievement of individual and/or company-wide goals.

The Distributor also has relationships with the sub-advisers to the various underlying Funds and their affiliates. The Distributor receives payments from some sub-advisers to assist in defraying the costs of certain promotional and marketing meetings hosted by the Distributor in which the sub-advisers participate. The amounts paid depend on the nature of the meetings, the number of meetings attended, the costs expected to be incurred and the level of the sub-adviser's participation. Our affiliated Financial Institutions may have other relationships with the sub-advisers (apart from Jackson) including selling retail mutual funds managed or advised by certain sub-advisers.

All of the compensation described here, and other compensation or benefits provided by the Distributor and/or Jackson or our affiliates, may be greater or less than the total compensation on similar or other products. The amount and/or structure of the compensation can create a conflict of interest as it may influence your Financial Institution and registered representative to present this Contract over other investment alternatives. The variations in compensation, however, may also reflect differences in sales effort or ongoing customer services expected of the Financial Institution and registered representative. You may ask your registered representative about any variations and how he or she and his or her Financial Institution are compensated for selling the Contract.

PURCHASES

Minimum Initial Premium:

- \$5,000 under most circumstances
- \$2,000 for a qualified plan Contract

Minimum Additional Premiums:

- \$500 for a qualified or non-qualified plan
- \$50 for an automatic payment plan
- You can pay additional Premiums at any time during the accumulation phase unless a specific add-on benefit or feature provides limitations.

These minimums apply to purchases, but do not preclude subsequent partial withdrawals that would reduce Contract Values below the minimum initial purchase amounts, as long as the amount left in the account is sufficient to pay the withdrawal charge. We reserve the right to limit the number of Contracts that you may purchase. We reserve the right, in our discretion, to limit, restrict, suspend or reject any or all initial or subsequent Premium payments and to limit the amount, frequency or timing of Premium payments, at any time on a non-discriminatory basis. Any of these actions by us would limit your ability to invest in the Contract and increase your values and benefits. There is a \$100 minimum balance requirement for each Investment Division and Fixed Account Option. We reserve the right to restrict availability or impose restrictions on the Fixed Account.

Maximum Premiums:

• The maximum aggregate Premiums you may make without our prior approval is \$2.5 million.

The payment of subsequent Premiums, depending on market conditions at the time they are made, may or may not contribute to the various benefits under your Contract. Our right to restrict Premiums to a lesser maximum amount may also affect the benefits under your Contract.

Allocations of Premium. You may allocate your Premiums to one or more of the Investment Divisions and Fixed Account Options. Each allocation must be a whole percentage between 0% and 100%. The minimum amount you may allocate to the Investment Division or a Fixed Account Option is \$100. We will allocate any additional Premiums you pay in the same way unless you instruct us otherwise.

You may not allocate your Contract Values among more than 99 Investment Divisions and Fixed Account Options at any one time.

We will issue your Contract and allocate your first Premium within two Business Days (days when the New York Stock Exchange is open) after we receive your first Premium and all information that we require for the purchase of a Contract. If we do not receive all of the information that we require, we will contact you to get the necessary information. If for some reason we are unable to complete this process within five Business Days, we will return your money. Subsequent Premiums are allocated on the Business Day that the Premium is received. Each Business Day ends when the New York Stock Exchange closes (usually 4:00 p.m. Eastern time).

Capital Protection Program. If you select our Capital Protection Program at issue, we will allocate enough of your Premium to the available Fixed Account Option you select to assure that the amount so allocated will equal, at the end of a selected period, your total original Premium paid. You may allocate the rest of your Premium to any Investment Division(s). If any part of the Fixed Account value is withdrawn or transferred before the end of the selected period, the value at the end of that period will not equal the original Premium. This program is available only if Fixed Account Options are available. There is no charge for the Capital

Protection Program. You should consult your financial professional with respect to the current availability of Fixed Account Options, their limitations, and the availability of the Capital Protection Program.

The Capital Protection Program is not available on Contracts with the Liquidity Option.

For an example of capital protection, assume you made a Premium payment of \$10,000 when the interest rate for the seven-year period was 3% per year. We would allocate \$8,131 to that period because \$8,131 would increase at that interest rate to \$10,000 after seven years, assuming no withdrawals are taken. The remaining \$1,869 of the payment would be allocated to the Investment Division(s) you selected.

Shorter specified periods require allocation of substantially all your Premium to achieve the intended result. In any case, the results will depend on the interest rate declared for the specified period. Please note, the interest rate used in the above example is for illustrative purposes only and is not intended to reflect the current interest rate for the specified period of this duration.

Accumulation Units. Your Contract Value allocated to the Investment Divisions will go up or down depending on the performance of the Investment Divisions you select. In order to keep track of the value of your Contract during the accumulation phase, we use a unit of measure called an "Accumulation Unit." During the income phase we use a measure called an "Annuity Unit."

Every Business Day, we determine the Accumulation Unit value for each of the Investment Divisions by:

- determining the total amount of assets held in the particular Investment Division;
- subtracting any asset-based charges and taxes chargeable under the Contract; and
- dividing this amount by the number of outstanding Accumulation Units.

Charges deducted through the cancellation of units are not reflected in this computation.

The Accumulation Unit value may go up or down from day to day based on the performance of the Funds, expenses, and deduction of Contract charges. The base Contract has different Accumulation Unit values than each combination of add-on benefits an Owner may elect, based on the differing amount of charges applied in calculating the Accumulation Unit values.

When you make a Premium payment, we credit your Contract with Accumulation Units. The number of Accumulation Units we credit is determined at the close of that Business Day by dividing the amount of the Premium allocated to any Investment Division by the Accumulation Unit value for that Investment Division that reflects the respective combination of add-on benefits you have elected and their respective charges. If your Premium payment is received after the close of the New York Stock Exchange, the number of Accumulation Units credited will be determined at the end of the next Business Day.

In connection with arrangements we have to transact business electronically, we may have agreements in place whereby the time when certain broker-dealers receive your initial Premium Payment and all required information in Good Order will be used for initial pricing of your Contract Values. However, if we do not have an agreement with a broker-dealer providing for these pricing procedures, initial Premium Payments received by the broker-dealer will not be priced until they are received by us. As of the date of this prospectus, we have such an agreement with Morgan Stanley Smith Barney LLC and SBHU Life Agency. Please check with your financial professional to determine if his/her broker-dealer has an agreement with the Company that provides for these pricing procedures.

TRANSFERS AND FREQUENT TRANSFER RESTRICTIONS

You may transfer your Contract Value between and among the Investment Divisions at any time, unless transfers are subject to other limitations, but transfers between an Investment Division and the Fixed Account must occur prior to the Income Date.

You can make 25 transfers every Contract Year without charge.

A transfer will be effective as of the end of the Business Day when we receive your transfer request in Good Order, and we will disclaim all liability for transfers made based on your transfer instructions, or the instructions of a third party authorized to submit transfer requests on your behalf.

Transfers from the Fixed Account generally will be subject to any applicable Market Value Adjustment.

Potential Limits and Conditions on Fixed Account Transfers. There may be periods when we do not offer any Fixed Account. We can prohibit or impose limitations or other requirements on transfers to or from the Fixed Account as permitted by applicable law.

In addition, we also specifically reserve the right to impose the limitations and conditions set forth in 1-4 below with respect to the one-year Fixed Account Option. Although we are not imposing these restrictions as of the date of this prospectus, if we do decide to impose them, they could provide as follows with respect to both new and already outstanding Contracts:

- 1. During any Contract Year, the aggregate dollar amount of all transfers from the one-year Fixed Account Option (including transfers at the end of the one-year period) could not exceed whichever of the following three maximums apply to you for that year:
 - Maximum transfers during the first Contract Year in which you have Contract Value in the one-year Fixed Account Option subject to these restrictions: 1/3 of your Contract Value in the one-year Fixed Account Option as of the most recent Contract Anniversary;
 - Maximum transfers during any subsequent Contract Year, if you had Contract Value subject to these restrictions during the preceding Contract Year:
 - 1/3 of your Contract Value in the one-year Fixed Account Option as of the most recent Contract Anniversary if you **did not** make a 1/3 transfer in the preceding year as mentioned above or
 - 1/2 of your Contract Value in the one-year Fixed Account Option as of the most recent Contract Anniversary if you did make such a 1/3 transfer in the preceding year; or
 - Maximum transfers during any Contract Year, if you had Contract Value subject to these restrictions during both of the preceding two Contract Years and, in those years, you made the 1/3 maximum transfer in the first year and 1/2 maximum transfer in the second year as mentioned above: all of your remaining Contract Value in the one-year Fixed Account Option.
- 2. We could require that any transfer from the one-year Fixed Account Option in a Contract Year occur at least twelve months after the most recent such transfer in the previous Contract Year.
- 3. We could restrict or prohibit your transfers into or allocations of any additional Premiums to the one-year Fixed Account Option in any Contract Year in which you make a transfer from the one-year Fixed Account Option.
- 4. We could restrict or prohibit your transfers from the one-year Fixed Account Option in any Contract Year in which you make a transfer into or allocate any additional Premiums to the one-year Fixed Account Option.

We may impose restrictions 1-4 separately or in combination but we expect that they would be imposed as a group, so that you would be subject to all of these restrictions if you are subject to any of them.

Certain systematic investment programs could be excluded from the restrictions listed in 1-4 above, such that transfers under those programs would not count against the maximum amounts that may be transferred out of the one-year Fixed Account Option and the Contract Value under such programs would be excluded from the computation of such maximum amounts.

We also could permit or require that a systematic transfer program be used to make transfers from any Fixed Account Options. For example, you could be permitted to have the three transfers that are referred to in restriction 1 above automated through a systematic transfer out ("STO") on each of your next three Contract Anniversaries. The amount automatically transferred on each of such three Contract Anniversaries would be the maximum amount that would be permitted to be transferred on that date under restriction 1, such that following the automatic STO transfer on the third such Contract Anniversary you would no longer have any Contract Value in the one-year Fixed Account Option. If we establish such an STO for you, however, we would (pursuant to restrictions 3 and 4 above) prohibit you from making any other transfer from, or any Premium payments or transfers into, the one-year Fixed Account Option during any Contract Year in which an automatic STO transfer is made for you. Also (pursuant to restriction 2 above) you could elect such an STO only if (i) at least twelve calendar months have passed since your last STO program (if any) had ended and (ii) during the Contract Year in which you make the election, you have not made any transfers from, or any Premium payments or transfers into the one-year Fixed Account Option (unless you made the transfer or Premium payment before the time we had instituted restrictions 1-4). Transfers pursuant to any STO would not count toward your 25 free transfer limit.

If we require you to commence an STO at a time when, due to any of the foregoing restrictions, you would not be eligible to elect such a program, the three annual STO transfers will be delayed. In that case, the first such STO transfer would occur on the first Contract Anniversary after you are eligible to elect an STO.

If we impose the restrictions described in 1-4 above, we would provide you prompt written notice of that fact, as well as any requirement or option to commence an STO. In that case, the restrictions would be effective immediately and we would not expect to provide you with an opportunity to make transfers from the one-year Fixed Account Option, other than in compliance with and subject to the limitations in such restrictions. Accordingly, you should consider whether you are willing to be subject to those limitations before you allocate any Premiums or transfers to the one-year Fixed Account Option.

We also may restrict your participation in any systematic investment program if you allocate any amounts to a Fixed Account Option.

Restrictions on Transfers: Market Timing. The Contract is not designed for frequent transfers by anyone. Frequent transfers between and among Investment Divisions may disrupt the underlying Funds and could negatively impact performance, by interfering with efficient management and reducing long-term returns, and increasing administrative costs. Frequent transfers may also dilute the value of shares of an underlying Fund. Neither the Contracts nor the underlying Funds are meant to promote any active trading strategy, like market timing. Allowing frequent transfers by one or some Owners could be at the expense of other Owners of the Contract. To protect Owners and the underlying Funds, we have policies and procedures to deter frequent transfers between and among the Investment Divisions.

Under these policies and procedures, there is a \$25 charge per transfer after 25 in a Contract Year, and no round trip transfers are allowed within 15 calendar days. Also, we could restrict your ability to make transfers to or from one or more of the Investment Divisions, which possible restrictions may include, but are not limited to:

- limiting the number of transfers over a period of time;
- requiring a minimum time period between each transfer;
- limiting transfer requests from an agent acting on behalf of one or more Owners or under a power of attorney on behalf of one or more Owners; or
- limiting the dollar amount that you may transfer at any one time.

To the extent permitted by applicable law, we reserve the right to restrict the number of transfers per year that you can request and to restrict you from making transfers on consecutive Business Days. In addition, your right to make transfers between and among Investment Divisions may be modified if we determine that the exercise by one or more Owners is, or would be, to the disadvantage of other Owners.

We continuously monitor transfers under the Contract for disruptive activity based on frequency, pattern and size. We will more closely monitor Contracts with disruptive activity, placing them on a watch list, and if the disruptive activity continues, we will restrict the availability of electronic or telephonic means to make a transfer, instead requiring that transfer instructions be mailed through regular U.S. postal service, and/or terminate the ability to make transfers completely, as necessary. If we terminate your ability to make transfers, you may need to make a partial withdrawal to access the Contract Value in the Investment Division(s) from which you sought a transfer. We will notify you and your financial professional in writing within five days of placing the Contract on a watch list.

Regarding round trip transfers, we will allow redemptions from an Investment Division; however, once a complete or partial redemption has been made from an Investment Division through an Investment Division transfer, you will not be permitted to transfer any value back into that Investment Division within 15 calendar days of the redemption. We will treat as short-term trading activity any transfer that is requested into an Investment Division that was previously redeemed within the previous 15 calendar days, whether the transfer was requested by you or a third party.

Our policies and procedures do not apply to the JNL/WMC Government Money Market Investment Division and the Fixed Account, Dollar Cost Averaging, Earnings Sweep or the Rebalancing program. We may also make exceptions that involve an administrative error, or a personal unanticipated financial emergency of an Owner resulting from an identified health, employment, or other financial or personal event that makes the existing allocation imprudent or a hardship. These limited exceptions will be granted by an oversight team pursuant to procedures designed to result in their consistent application. Please contact our Service Center if you believe your transfer request entails a financial emergency.

Otherwise, we do not exempt any person or class of persons from our policies and procedures. We have agreements allowing for asset allocation and investment advisory services that are not only subject to our policies and procedures, but also to additional conditions and limitations, intended to limit the potential adverse impact of these activities on other Owners of the Contract. We expect to apply our policies and procedures uniformly, but because detection and deterrence involves judgments that are inherently subjective, we cannot guarantee that we will detect and deter every Contract engaging in frequent transfers every time. If these policies and

procedures are ineffective, the adverse consequences described above could occur. We also expect to apply our policies and procedures in a manner reasonably designed to prevent transfers that we consider to be to the disadvantage of other Owners, and we may take whatever action we deem appropriate, without prior notice, to comply with or take advantage of any state or federal regulatory requirement.

TELEPHONE AND INTERNET TRANSACTIONS

The Basics. You can request certain transactions by telephone or at www.jackson.com, our Internet website, subject to our right to terminate electronic or telephonic transfer privileges described above. Our Service Center representatives are available during business hours to provide you with information about your account. We require that you provide proper identification before performing transactions over the telephone or through our Internet website. For Internet transactions, this will include a Personal Identification Number (PIN). You may establish or change your PIN at www.jackson.com.

What You Can Do and How. You may make transfers by telephone or through the Internet unless you elect not to have this privilege. Any authorization you (and any joint Owner) provide to us in an application, at our website, or through other means will authorize us to accept transaction instructions, including Investment Division transfers/allocations, by you, a joint Owner, or your financial professional unless you notify us to the contrary. To notify us, please call us at the Service Center. Our contact information is on the cover page of this prospectus and the number is referenced in your Contract or on your quarterly statement. We reserve the right to discontinue this privilege or implement additional limitations.

What You Can Do and When. When authorizing a transfer, you must complete your telephone call by the close of the New York Stock Exchange (usually 4:00 p.m. Eastern time) in order to receive that day's Accumulation Unit value for an Investment Division.

Transfer instructions you send electronically are considered to be received by us at the time and date stated on the electronic acknowledgment we return to you. If the time and date indicated on the acknowledgment is before the close of the New York Stock Exchange, the instructions will be carried out that day. Otherwise the instructions will be carried out the next Business Day. We will retain permanent records of all web-based transactions by confirmation number. If you do not receive an electronic acknowledgment, you should telephone our Service Center immediately.

How to Cancel a Transaction. You may only cancel an earlier telephonic or electronic transfer request made on the same day by calling the Service Center before the New York Stock Exchange closes. Otherwise, your cancellation instruction will not be allowed because of the round trip transfer restriction.

Our Procedures. Our procedures are designed to provide reasonable assurance that telephone or any other electronic authorizations are genuine. Our procedures include requesting identifying information and tape-recording telephone communications and other specific details. We and our affiliates disclaim all liability for any claim, loss or expense resulting from any alleged error or mistake in connection with a transaction requested by telephone or other electronic means that you did not authorize. However, if we fail to employ reasonable procedures to ensure that all requested transactions are properly authorized, we may be held liable for such losses.

We do not guarantee access to telephonic and electronic information or that we will be able to accept transaction instructions via the telephone or electronic means at all times. We also reserve the right to modify, limit, restrict, or discontinue at any time and without notice the acceptance of instruction from someone other than you and/or this telephonic and electronic transaction privilege. Elections of any add-on benefit or program must be in writing and will be effective upon receipt of the request in Good Order.

Upon notification of the Owner's death, any telephone transfer authorization, other than by the surviving joint Owners, designated by the Owner ceases and we will not allow such transactions unless the executor/representative provides written authorization for a person or persons to act on the executor's/representative's behalf.

ACCESS TO YOUR MONEY

You can have access to the money in your Contract:

- by making either a partial or total withdrawal,
- by electing the Automatic Withdrawal Program,
- by electing to receive income payments.

Your Beneficiary can have access to the money in your Contract when a death benefit is paid.

Withdrawals under the Contract may be subject to a withdrawal charge. For purposes of the withdrawal charge, we treat withdrawals as coming first from earnings (which may be withdrawn free of any withdrawal charge), and then from the oldest Remaining Premium. When you make a full withdrawal you will receive the value of your Contract as of the end of the Business Day your request is received by us in Good Order, *minus* any applicable taxes, the annual contract maintenance charge, charges due under any add-on benefit, and all applicable withdrawal charges, adjusted for any applicable Market Value Adjustment. For more information about withdrawal charges, please see "Withdrawal Charge" beginning on page 35. We will pay the withdrawal proceeds within seven days of a request in Good Order. If a Premium Payment made by personal check or electronic draft is received within the five days preceding a withdrawal request, we may delay payment of the withdrawal proceeds up to seven days after the date of the request, to ensure the check or electronic draft is not returned due to insufficient funds.

Your withdrawal request must be in writing. We will accept withdrawal requests submitted via facsimile. There are risks associated with not requiring original signatures in order to disburse the money. To minimize the risks, the proceeds will be sent to your last recorded address in our records, so be sure to notify us, in writing, with an original signature of any address change. We do not assume responsibility for improper disbursements if you have failed to provide us with the current address to which the proceeds should be sent.

Except in connection with the Automatic Withdrawal Program, you must withdraw at least \$500 or, if less, the entire amount in the Fixed Account Option or Investment Division from which you are making the withdrawal. If you are not specific in your withdrawal request, your withdrawal will be taken from your allocations to the Investment Divisions and Fixed Account Options based on the proportion their respective values bear to the Contract Value.

With the Automatic Withdrawal Program, you may withdraw a specified dollar amount (of at least \$50 per withdrawal) or a specified percentage. A withdrawal request that would reduce the remaining Contract Value to less than \$2,000 will be treated as a request for a total withdrawal unless this \$2,000 minimum has been expressly waived by endorsement. After your withdrawal, at least \$100 must remain in each Fixed Account Option or Investment Division from which the withdrawal was taken.

If you have an investment adviser who, for a fee, manages your Contract Value, you may authorize payment of the fee from the Contract by requesting a partial withdrawal. There are conditions and limitations, so please contact our Service Center for more information. Our contact information is on the cover page of this prospectus. We neither endorse any investment advisers, nor make any representations as to their qualifications. The fee for this service would be covered in a separate agreement between the two of you, and would be in addition to the fees and expenses described in this prospectus.

Income taxes, tax penalties and certain restrictions may apply to any withdrawal you make. There are limitations on withdrawals from qualified plans. For more information, please see "TAXES" beginning on page 50.

Liquidity Option. If you elect the Liquidity Option, you will not pay a withdrawal charge when you make a partial or full withdrawal. This option must be selected at issue. This option removes the five year withdrawal charge schedule that would otherwise apply. You will pay a charge of 0.25% on an annual basis of the average net asset value of your allocations to the Investment Divisions for this option. The decision to elect the Liquidity Option should consider whether you anticipate taking or needing to take a large withdrawal that would otherwise be subject to charges under the five year withdrawal charge schedule imposed on each Premium payment. The charge for the Liquidity Option applies until the date you annuitize whether or not you take any withdrawals.

Automatic Withdrawal Program. You can arrange to have money automatically sent to you periodically while your Contract is still in the accumulation phase. You may withdraw a specified dollar amount (of at least \$50 per withdrawal), a specified percentage, or earnings. Your withdrawals may be on a monthly, quarterly, semi-annual, or annual basis. There is no charge for the Automatic Withdrawal Program; however, you will have to pay taxes on the money you receive. You may also be subject to a withdrawal charge and a Market Value Adjustment.

Suspension of Withdrawals or Transfers. We may be required to suspend or delay withdrawals or transfers to or from an Investment Division when:

- the New York Stock Exchange is closed (other than customary weekend and holiday closings);
- under applicable SEC rules, trading on the New York Stock Exchange is restricted;

- under applicable SEC rules, an emergency exists so that it is not reasonably practicable to dispose of securities in an Investment Division or determine the value of its assets; or
- the SEC, by order, may permit for the protection of Contract Owners.

We have reserved the right to defer payment for a withdrawal or transfer from the Fixed Account for up to six months or the period permitted by law.

INCOME PAYMENTS (THE INCOME PHASE)

The income phase of your Contract occurs when you begin receiving regular income payments from us. The Income Date is the day those payments begin. Once income payments begin, the Contract cannot be returned to the accumulation phase. You can choose the Income Date and an income option. All of the Contract Value must be annuitized. The income options are described below.

If you do not choose an income option, we will assume that you selected option 3, which provides a life annuity with 120 months of guaranteed payments.

You can change the Income Date or income option at least seven days before the Income Date, but changes to the Income Date may only be to a later date. You must give us written notice at least seven days before the scheduled Income Date. Income payments must begin by the Contract Anniversary on which you will be 95 years old, or such earlier date as required by an applicable qualified plan, law, or regulation.

Under a traditional Individual Retirement Annuity, Required Minimum Distributions must begin in the calendar year in which you attain age 72 (70½ if you reached age 70½ before January 1, 2020) (or such other age as required by law). Distributions under qualified plans and Tax-Sheltered Annuities must begin by the later of the calendar year in which you attain age 72 (70½ if you reached age 70½ before January 1, 2020) or the calendar year in which you retire. You do not necessarily have to annuitize your Contract to meet the minimum distribution requirements for Individual Retirement Annuities, qualified plans, and Tax-Sheltered Annuities. Distributions from Roth IRAs are not required prior to your death.

At the Income Date, you can choose to receive fixed payments or variable payments based on the Investment Divisions. If you do not choose how to receive your income payments, your income payments will be based on the variable and fixed options that were in place on the Income Date.

You can choose to have income payments made monthly, quarterly, semi-annually or annually. Or you can choose a single lump-sum payment. If you have less than \$2,000 to apply toward an income option and state law permits, we may provide your payment in a single lump sum, part of which may be taxable as Federal Income. Likewise, if your first income payment would be less than \$20 and state law permits, we may set the frequency of payments so that the first payment would be at least \$20.

Fixed Income Payments. If you choose to receive fixed payments, the amount of each income payment will be determined by applying the portion of your Contract Value allocated to fixed payments, less any applicable Premium taxes and charges, to the rates in the annuity tables contained in the Contract applicable to the income option chosen. If the current annuity rates provided by us on contracts of this type would be more favorable to you, the current rates will be used.

Variable Income Payments. If you choose to have any portion of your income payments based upon one or more Investment Divisions, the dollar amount of your initial annuity payment will depend primarily upon the following:

- the amount of your Contract Value you allocate to the Investment Division(s) on the Income Date;
- the amount of any applicable Premium taxes, or withdrawal charges and any Market Value Adjustment deducted from your Contract Value on the Income Date;
- which income option you select; and
- the investment factors listed in your Contract that translate the amount of your Contract Value
 (as adjusted for applicable charges, frequency of payment and commencement date) into
 initial payment amounts that are measured by the number of Annuity Units of the Investment
 Division(s) you select credited to your Contract.

The investment factors in your Contract are calculated based upon a variety of factors, including an assumed investment rate of 1.0% and, if you select an income option with a life contingency, the age and gender of the Annuitant. State variations may apply.

If the actual net investment rate experienced by an Investment Division exceeds the assumed investment rate, variable annuity payments will increase over time. Conversely, if the actual net investment rate is less than the assumed investment rate, variable annuity payments will decrease over time. If the actual net investment rate equals the assumed investment rate, the variable annuity payments will remain constant.

We calculate the dollar amount of subsequent income payments that you receive based upon the performance of the Investment Divisions you select. If that performance (measured by changes in the value of Annuity Units) exceeds the assumed investment rate, then your income payments will increase; if that performance is less than the assumed investment rate, then your income payments will decrease. Neither expenses actually incurred (other than taxes on investment return), nor mortality actually experienced, will adversely affect the dollar amount of subsequent income payments.

Income Options. The Annuitant is the person whose life we look to when we make income payments (each description assumes that you are the Owner and Annuitant). The following income options may not be available in all states. Each income option is available as fixed payments or variable payments.

Option 1 - Life Income. This income option provides monthly payments for your life. No further payments are payable after your death. Thus, it is possible for you to receive only one payment if you die prior to the date the second payment is due. If you die after the Income Date but before the first monthly payment, the amount allocated to the income option will be paid to your Beneficiary.

Option 2 - Joint and Survivor. This income option provides monthly payments for your life and for the life of another person (usually your spouse) selected by you. Upon the death of either person, the monthly payments will continue during the lifetime of the survivor. No further payments are payable after the death of the survivor. If you and the person who is the joint life both die after the Income Date but before the first monthly payment, the amount allocated to the income option will be paid to your Beneficiary.

Option 3 - Life Annuity With at Least 120 or 240 Monthly Payments. This income option provides monthly payments for the Annuitant's life, but with payments continuing to the Beneficiary for the remainder of 10 or 20 years (as you select) if the Annuitant dies before the end of the selected period. If the Beneficiary does not want to receive the remaining scheduled payments, a single lump sum may be requested, which will be equal to the present value of the remaining payments (as of the date of calculation) discounted at an interest rate that will be no more than 1% higher than the rate used to calculate the initial payment. The calculation of the lump-sum payment results in a Commutation Fee, which is further discussed on page 37.

Option 4 - Income for a Specified Period. This income option provides monthly payments for any number of years from 5 to 30. If the Beneficiary does not want to receive the remaining scheduled payments, a single lump sum may be requested, which will be equal to the present value of the remaining payments (as of the date of calculation) discounted at an interest rate that will be no more than 1% higher than the rate used to calculate the initial payment. The calculation of the lump-sum payment results in a Commutation Fee, which is further discussed on page 37.

Additional Options - We may make other income options available.

No withdrawals are permitted during the income phase under an income option that is life contingent.

DEATH BENEFIT

The Contract has a basic death benefit, which is payable during the accumulation phase. Instead you may choose an add-on death benefit for an additional charge. For more information about the availability of an add-on death benefit, please see the application, check with the financial professional helping you to purchase the Contract or contact us at our Service Center. Our contact information is on the first page of this prospectus. The add-on death benefit is only available at the time you apply for a Contract. In addition, once an add-on death benefit is chosen, it cannot be canceled. The add-on death benefit will terminate upon the death of the Owner.

The death benefit is due following our receipt of all required documentation in Good Order. Required documentation includes proof of death, a claim form, and any other documentation we reasonably require. If we have received proof of death and any other required documentation, we will calculate the share of the death benefit due to a Beneficiary of record using Contract values established at the close of business on the date we receive from that Beneficiary a claim form with a payment option elected. If we have not received proof of death or any other required documentation, we will calculate the share of the death benefit due to a Beneficiary of record using Contract values established at the close of business on the date we receive any remaining required documentation. As a result,

market fluctuation may cause the calculation of a Beneficiary's death benefit share to differ from the calculation of another Beneficiary's death benefit share. We will pay interest on a Beneficiary's death benefit share as required by law.

We will pay the Contract's basic death benefit unless you have elected an add-on death benefit. If the Contract includes a guaranteed minimum death benefit, we will, according to the Contract's current allocation instructions on file, deposit into the Contract's Investment Divisions and Fixed Account the amount by which the guaranteed minimum death benefit exceeds the Contract's account value established at the close of business on the date we receive all documentation in Good Order from the first Beneficiary to submit a claim form.

Basic Death Benefit. The basic death benefit is payable during the accumulation phase. The death benefit equals your Contract Value on the date we receive all required documentation from your Beneficiary.

If you die before moving to the income phase, the person you have chosen as your Beneficiary will receive a death benefit. If you have a joint Owner, the death benefit will be paid when the first joint Owner dies. The surviving joint Owner will be treated as the Beneficiary. Any other Beneficiary designated will be treated as a contingent Beneficiary. Only a spousal Beneficiary has the right to continue the Contract in force upon your death.

Return of Premium Guaranteed Minimum Death Benefit ("Return of Premium GMDB") changes your basic death benefit during the accumulation phase of your Contract to the greater of:

- (a) your Contract Value as of the end of the Business Day on which we receive all required documentation from your Beneficiary; or
- (b) all Premiums paid into the Contract (net of any applicable premium taxes and charges), reduced for withdrawals (including any applicable charges and adjustments for such withdrawals) in proportion to the reduction in the Contract Value at the time of the withdrawal.

The Return of Premium GMDB Benefit Base will be determined at the end of any Business Day, and is equal to all Premiums (net of any applicable Premium tax) paid into the Contract, reduced by any withdrawals (including any applicable adjustments for such withdrawals). All adjustments will occur at the time of the withdrawal or Premium payment and all adjustments for amounts withdrawn reduce the death benefit in the same proportion that the Contract Value was reduced on the date of the withdrawal. If the Contract Value is lower than the GMDB benefit base on the date of a withdrawal, that withdrawal may reduce the GMDB benefit base by more than the dollar amount of the withdrawal. For example, if the Contract Value is \$80,000 and Premium is \$100,000 prior to a withdrawal of \$8,000, the withdrawal will reduce Premium to \$90,000 using the formula \$100,000 - (\$100,000 x \$8,000/\$80,000). Withdrawals may prematurely reduce the value of this Return of Premium Death Benefit.

On each fifth Contract Anniversary, the GMDB charge may be increased. If you elect to opt out of the current charge increase and any future charge increases at the time an increase is announced, Premium payments subsequent to such election will not be allowed. For more information, please see "Death Benefit Charges".

Please note that if you elect this add-on benefit, ownership changes are allowed, but Covered Lives cannot be changed. Under this GMDB, the original Owner and any joint Owner are the Covered Lives. If the Owner is a legal entity, the Annuitant (and any joint Annuitant) named at election of the GMDB is a Covered Life.

Unlike the basic death benefit, this add-on death benefit may provide value on or after the Income Date. Payment under this add-on death benefit will only be made if you wait until the Latest Income Date to begin receiving income payments. If the Income Date is before the Latest Income Date, then this add-on death benefit terminates, and no death benefit is payable. However, if the Income Date is on the Latest Income Date, then the death benefit amount is equal to:

- (a) the GMDB Benefit Base on the Latest Income Date; less
- (b) the Contract Value on the Latest Income Date.

If there is a death benefit amount on or after the Income Date, it will be payable to the Beneficiary when due proof of any Covered Life's death is received by the Company in Good Order. If the Covered Life is not deceased as of the date that the final annuity payment under the elected income option is due, the death benefit amount will be payable in a lump sum to the Owner along with the final annuity payment.

Payout Options. The basic death benefit and the add-on death benefit can be paid under one of the following payout options:

- single lump-sum payment;
- payment of entire death benefit within 5 years of the date of death;
- payment of the entire death benefit under an income option over the Beneficiary's lifetime or for a period not extending beyond the Beneficiary's life expectancy; or payment of a portion of the death benefit under an income option over the Beneficiary's lifetime or for a period not extending beyond the Beneficiary's life expectancy, with the balance of the death benefit payable to the Beneficiary. Any portion of the death benefit not applied under an income option within one year of the Owner's death, however, must be paid within five years of the date of the Owner's death; or
- the Beneficiary may elect to receive distribution of the entire death benefit in a series of automatic withdrawals, beginning within one year of the date of death, over a period not extending beyond the Beneficiary's life expectancy. The distributions must satisfy the minimum distribution requirements resulting from the death of the Owner as defined by the Internal Revenue Code and the implementing regulations. Upon the Beneficiary's death, under a tax-qualified Contract, the designated beneficiary may elect to continue such distributions or take a lump-sum distribution of the Contract Value. Under a non-qualified Contract, the designated beneficiary will receive a lump-sum distribution of the Contract Value.

Under these payout options, the Beneficiary may also elect to receive additional lump sums at any time. The receipt of any additional lump sums will reduce the future income payments to the Beneficiary.

If the Beneficiary elects to receive the death benefit as an income option, the Beneficiary must make that payout option election within 60 days of the date we receive proof of death and payments of the death benefit must begin within one year of the date of death. If the Beneficiary chooses to receive some or all of the death benefit in a single sum and all the necessary requirements are met, we will pay the death benefit within seven days. If your Beneficiary is your spouse, he/she may elect to continue the Contract, at the current Contract Value, in his/her own name. If no payout option is selected, the entire death benefit will be paid within 5 years of the Owner's date of death. The death benefit will remain invested in the Investment Divisions in accordance with the allocation instructions given by the Owner until a payout option is selected, or new instructions are received from the Beneficiary after the claim is processed. For more information, please see "Spousal Continuation Option" below.

Pre-Selected Payout Options. As Owner, you may also make a predetermined selection of the death benefit payout option if your death occurs before the Income Date. However, at the time of your death, we may modify the death benefit option if the death benefit you selected exceeds the life expectancy of the Beneficiary. If this Pre-selected Death Benefit Option Election is in force at the time of your death, the payment of the death benefit may not be postponed, nor can the Contract be continued under any other provisions of this Contract. This restriction applies even if the Beneficiary is your spouse, unless such restriction is prohibited by the Internal Revenue Code. If the Beneficiary does not submit the required documentation for the death benefit to us within one year of your death, however, the death benefit must be paid, in a single lump sum, within five years of your death. The Pre-selected Death Benefit Option may not be available in your state.

Spousal Continuation Option. If your spouse is the Beneficiary and elects to continue the Contract in his or her own name after your death, pursuant to the Spousal Continuation Option, no death benefit will be paid at that time. Moreover, except as described below, we will contribute to the Contract a continuation adjustment, which is the amount by which the death benefit that would have been payable exceeds the Contract Value. We calculate the continuation adjustment amount using the Contract Value and death benefit as of the date we receive completed forms and due proof of death from the Beneficiary of record and the spousal Beneficiary's written request to continue the Contract (the "Continuation Date"). We will add this amount to the Contract based on the current allocation instructions at the time of your death, subject to any minimum allocation restrictions, unless we receive other allocation instructions from your spouse. The Spousal Continuation Option may not be available in your state. See your financial professional for information regarding the availability of the Spousal Continuation Option.

If your spouse continues the Contract in his/her own name under the Spousal Continuation Option, the new Contract Value will be considered the initial Premium for purposes of determining any future death benefit under the Contract. The age of the surviving spouse at the time of the continuation of the Contract will be used to determine all benefits under the Contract prospectively, so the death benefit may be at a different level.

If your spouse elects to continue the Contract, any optional Guaranteed Minimum Death Benefit will terminate upon the death of the Owner.

The Spousal Continuation Option is available to elect one time on the Contract. However, if you have elected the Pre-selected Death Benefit Option the Contract cannot be continued under the Spousal Continuation Option, unless preventing continuation would be prohibited by the Internal Revenue Code. The Pre-selected Death Benefit Option may not be available in your state.

Death of Owner On or After the Income Date. If you or a joint Owner dies, and is not the Annuitant, on or after the Income Date, any remaining payments under the income option elected will continue at least as rapidly as under the method of distribution in effect at the date of death. If you die, the Beneficiary becomes the Owner. If the joint Owner dies, the surviving joint Owner, if any, will be the designated Beneficiary. Any other Beneficiary designation on record at the time of death will be treated as a contingent Beneficiary. A contingent Beneficiary is entitled to receive payment only after the Beneficiary dies.

Death of Annuitant. If the Annuitant is not an Owner or joint Owner and dies before the Income Date, you can name a new Annuitant, subject to our underwriting rules. If you do not name a new Annuitant within 30 days of the death of the Annuitant, you will become the Annuitant. However, if the Owner is a legal entity (for example, a corporation), then the death of the Annuitant will be treated as the death of the Owner, and a new Annuitant may not be named.

If the Annuitant dies on or after the Income Date, any remaining guaranteed payment will be paid to the Beneficiary as provided for in the income option selected. Any remaining guaranteed payment will be paid at least as rapidly as under the method of distribution in effect at the Annuitant's death.

Stretch Contracts. The beneficiary of death benefit proceeds from another company's non-qualified annuity contract or the eligible designated beneficiary (as defined by the Internal Revenue Code and implementing regulations) of death benefit proceeds from another company's tax-qualified annuity contract or plan, may use the death benefit proceeds to purchase a Contract ("Stretch Contract") from us. The beneficiary of the prior contract or plan ("Beneficial Owner") must begin taking distributions, or must have begun taking distributions under the prior contract or plan, within one year of the decedent's death. The distributions must be taken over a period not to exceed the life expectancy of the Beneficial Owner, and the distributions must satisfy the minimum distribution requirements resulting from the decedent's death as defined by the Internal Revenue Code and implementing regulations. (See "Non-Qualified Contracts – Required Distributions" on page 51.) Upon the Beneficial Owner's death, under a tax-qualified Stretch Contract, the designated beneficiary must distribute the Contract Value on or before the end of the 10th year after the Beneficial Owner's death. Upon the Beneficial Owner's death, under a non-qualified Stretch Contract, the Stretch Contract terminates, and the designated beneficiary will receive a lump-sum distribution of the Contract Value. We will waive withdrawal charges on any withdrawal necessary to satisfy the minimum distribution requirements. Withdrawals in excess of the minimum distribution requirements may be taken at any time, subject to applicable withdrawal charges. Non-qualified Stretch Contracts may not be available in all states.

The rights of Beneficial Owners are limited to those applicable to the distribution of the death benefit proceeds. Add-on benefits are not available.

Special requirements apply to non-qualified Stretch Contracts. All Premium payments must be received in the form of a full or partial 1035 exchange of the death benefit proceeds from a non-qualified annuity contract and other forms of Premium payments are not permitted. Joint ownership is not permitted. The Beneficial Owner may not annuitize the Stretch Contract. The Stretch Contract terminates upon the Beneficial Owner's death, and we will pay the Contract Value to the Beneficial Owner's beneficiary(ies) in a lump-sum distribution. Please read the Contract and accompanying endorsement carefully for more information about these and other requirements.

TAXES

The following is only general information and is not intended as tax advice to any individual. Additional tax information is included in the Statement of Additional Information ("SAI"). You should consult your own tax advisor as to how these general rules will apply to you if you purchase a Contract.

CONTRACT OWNER TAXATION

Tax-Qualified and Non-Qualified Contracts. If you purchase your Contract as a part of a tax-qualified plan such as an Individual Retirement Annuity (IRA), Tax-Sheltered Annuity (sometimes referred to as a 403(b) Contract), or pension or profit-sharing plan (including a 401(k) Plan or H.R. 10 Plan) your Contract will be what is referred to as a tax-qualified contract. Tax deferral under a tax-qualified contract arises under the specific provisions of the Internal Revenue Code (Code) governing the tax-

qualified plan, so a tax-qualified contract should be purchased only for the features and benefits other than tax deferral that are available under a tax-qualified contract, and not for the purpose of obtaining tax deferral. You should consult your own advisor regarding these features and benefits of the Contract prior to purchasing a tax-qualified contract.

If you do not purchase your Contract as a part of any tax-qualified pension plan, specially sponsored program or an individual retirement annuity, your Contract will be what is referred to as a non-qualified contract. Some broker-dealers only offer the Contracts as non-qualified contracts.

The amount of your tax liability on the earnings under and the amounts received from either a tax-qualified or a non-qualified contract will vary depending on the specific tax rules applicable to your Contract and your particular circumstances.

Non-Qualified Contracts – General Taxation. Increases in the value of a non-qualified contract attributable to undistributed earnings are generally not taxable to the Contract Owner or the Annuitant until a distribution (either a withdrawal or an income payment) is made from the Contract. This tax deferral is generally not available under a non-qualified contract owned by a legal entity (e.g., a corporation or certain other entities other than a trust holding the Contract as an agent for a natural person). Loans based on a non-qualified contract are treated as distributions.

Non-Qualified Contracts – Aggregation of Contracts. For purposes of determining the taxability of a distribution, the Code provides that all non-qualified contracts issued by us (or an affiliate) to you during any calendar year must be treated as one annuity contract. Additional rules may be promulgated under this Code provision to prevent avoidance of its effect through the ownership of serial contracts or otherwise.

Non-Qualified Contracts – Withdrawals and Income Payments. Any withdrawal from a non-qualified contract is taxable as ordinary income to the extent it does not exceed the accumulated earnings under the Contract. In contrast, a part of each income payment under a non-qualified contract is generally treated as a non-taxable return of Premium. The balance of each income payment is taxable as ordinary income. The amounts of the taxable and non-taxable portions of each income payment are determined based on the amount of the investment in the Contract and the length of the period over which income payments are to be made. Income payments received after all of your investment in the Contract is recovered are fully taxable as ordinary income. Additional information is provided in the SAI.

The Code also imposes a 10% penalty on certain taxable amounts received under a non-qualified contract. This penalty tax will not apply to any amounts:

- paid on or after the date you reach age 59½;
- paid to your Beneficiary after you die;
- paid if you become totally disabled (as that term is defined in the Code);
- paid in a series of substantially equal periodic payments made annually (or more frequently) for your life (or life expectancy) or for a period not exceeding the joint lives (or joint life expectancies) of you and your Beneficiary;
- paid under an immediate annuity; or
- which come from Premiums made prior to August 14, 1982.

As of 2013, the taxable portion of distributions from a non-qualified annuity contract are considered investment income for purposes of the Medicare tax on investment income. As a result, a 3.8% tax will generally apply to some or all of the taxable portion of distributions to individuals whose modified adjusted gross income exceeds certain threshold amounts. These levels are \$200,000 in the case of single taxpayers, \$250,000 in the case of married taxpayers filing joint returns, and \$125,000 in the case of married taxpayers filing separately. Owners should consult their own tax advisors for more information.

Non-Qualified Contracts – Required Distributions. In order to be treated as an annuity contract for federal income tax purposes, the Code requires any nonqualified contract issued after January 18, 1985 to provide that (a) if an Owner dies on or after the annuity starting date but prior to the time the entire interest in the contract has been distributed, the remaining portion of such interest will be distributed at least as rapidly as under the method of distribution being used as of the date of that Owner's death; and (b) if an Owner dies prior to the annuity starting date, the entire interest in the contract must be distributed within five years after the date of the Owner's death.

The requirements of (b) above can be considered satisfied if any portion of the Owner's interest which is payable to or for the benefit of a "designated beneficiary" is distributed over the life of such beneficiary or over a period not extending beyond the life expectancy of that beneficiary and such distributions begin within one year of that Owner's death. The Owner's "designated beneficiary," who must be a natural person, is the person designated by such Owner as a Beneficiary and to whom ownership of the Contract passes by reason of death. However, if the Owner's "designated beneficiary" is the surviving spouse of the Owner, the Contract may be continued with the surviving spouse as the new Owner.

Non-Qualified Contracts - 1035 Exchanges. Under Section 1035 of the Code, you can purchase a variable annuity contract through a tax-free exchange of another annuity contract, or a life insurance or endowment contract. For the exchange to be tax-free under Section 1035, the owner and annuitant must be the same under the original annuity contract and the Contract issued to you in the exchange. If the original contract is a life insurance contract or endowment contract, the owner and the insured on the original contract must be the same as the owner and annuitant on the Contract issued to you in the exchange. Under certain circumstances, partial withdrawals may be treated as a tax-free "partial 1035 exchange" (please see the SAI for more information).

Tax-Qualified Contracts – Withdrawals and Income Payments. The Code imposes limits on loans, withdrawals, and income payments under tax-qualified contracts. The Code also imposes Required Minimum Distributions for tax-qualified contracts and a 10% penalty on certain taxable amounts received prematurely under a tax-qualified contract. These limits, Required Minimum Distributions, tax penalties and the tax computation rules are summarized in the SAI. Any withdrawals under a tax-qualified contract will be taxable except to the extent they are allocable to an investment in the Contract (any after-tax contributions). In most cases, there will be little or no investment in the Contract for a tax-qualified contract because contributions will have been made on a pre-tax or tax-deductible basis.

Withdrawals – Tax-Sheltered Annuities. The Code limits the withdrawal of amounts attributable to Premium payments made under a salary reduction agreement from Tax-Sheltered Annuities. Withdrawals can only be made when an Owner:

- reaches age 59½;
- leaves his/her job;
- dies;
- becomes disabled (as that term is defined in the Code); or
- experiences hardship. However, in the case of hardship, the Owner can only withdraw the Premium and not any earnings.

Withdrawals – Roth IRAs. Subject to certain limitations, individuals may also purchase a type of non-deductible IRA annuity known as a Roth IRA annuity. Qualified distributions from Roth IRA annuities are entirely federal income tax free. A qualified distribution requires that the individual has held the Roth IRA annuity for at least five years and, in addition, that the distribution is made either after the individual reaches age 59½, on account of the individual's death or disability, or as a qualified first-time home purchase, subject to \$10,000 lifetime maximum, for the individual, or for a spouse, child, grandchild or ancestor.

Constructive Withdrawals – Investment Adviser Fees. In a series of Private Letter Rulings, the Internal Revenue Service has held that the payment of investment adviser fees from a contract need not be considered a distribution for income tax purposes. Under the facts in these Rulings:

- there was a written agreement providing for payments of the fees solely from the annuity Contract,
- the Contract Owner had no liability for the fees, and
- the fees were paid solely from the annuity Contract to the adviser.

Death Benefits. None of the death benefits paid under the Contract to the Beneficiary will be tax-exempt life insurance benefits. The rules governing the taxation of payments from an annuity Contract, as discussed above, generally apply to the payment of death benefits and depend on whether the death benefits are paid as a lump sum or as annuity payments. Estate or gift taxes may also apply.

IRS Approval. The Contract and all death benefit riders attached thereto have been approved by the IRS for use as an Individual Retirement Annuity prototype.

Assignment. An assignment of your Contract will generally be a taxable event. Assignments of a tax-qualified Contract may also be limited by the Code and the Employee Retirement Income Security Act of 1974, as amended. These limits are summarized in the SAI. You should consult your tax advisor prior to making any assignment of your Contract.

Diversification. The Code provides that the underlying investments for a non-qualified variable annuity must satisfy certain diversification requirements in order to be treated as an annuity Contract. We believe that the underlying investments are being managed so as to comply with these requirements. A fuller discussion of the diversification requirements is contained in the SAI.

Owner Control. In a Revenue Ruling issued in 2003, the Internal Revenue Service (IRS) considered certain variable annuity and variable life insurance contracts and held that the types of actual and potential control that the Contract Owners could exercise over the investment assets held by the insurance company under these variable contracts was not sufficient to cause the Contract Owners to be treated as the owners of those assets and thus to be subject to current income tax on the income and gains produced by those assets. Under the Contract, like the contracts described in the Revenue Ruling, there will be no arrangement, plan, contract or agreement between the Contract Owner and Jackson regarding the availability of a particular investment option and other than the Contract Owner's right to allocate Premiums and transfer funds among the available sub-accounts, all investment decisions concerning the sub-accounts will be made by the insurance company or an adviser in its sole and absolute discretion.

The Contract will differ from the contracts described in the Revenue Ruling, in two respects. The first difference is that the contract in the Revenue Ruling provided only 12 investment options with the insurance company having the ability to add an additional 8 options whereas a Contract offers 128 Investment Divisions and at least one Fixed Account Option, and, if more than 99 options are offered, a Contract Owner's Contract Value can be allocated to no more than 99 variable and fixed options at any one time. The second difference is that the owner of a contract in the Revenue Ruling could only make one transfer per 30-day period without a fee whereas during the accumulation phase, a Contract Owner will be permitted to make up to 25 transfers in any one year without a charge.

The Revenue Ruling states that whether the owner of a variable contract is to be treated as the owner of the assets held by the insurance company under the contract will depend on all of the facts and circumstances. Jackson does not believe that the differences between the Contract and the contracts described in the Revenue Ruling with respect to the number of investment choices and the number of investment transfers that can be made under the contract without an additional charge should prevent the holding in the Revenue Ruling from applying to the Owner of a Contract. At this time, however, it cannot be determined whether additional guidance will be provided by the IRS on this issue and what standards may be contained in such guidance. We reserve the right to modify the Contract to the extent required to maintain favorable tax treatment.

Withholding. In general, the income portion of distributions from a Contract are subject to 10% federal income tax withholding and the income portion of income payments are subject to withholding at the same rate as wages unless you elect not to have tax withheld. Some states have enacted similar rules. Different rules may apply to payments delivered outside the United States.

Eligible rollover distributions from a Contract issued under certain types of tax-qualified plans will be subject to federal tax withholding at a mandatory 20% rate unless the distribution is made as a direct rollover to a tax-qualified plan or to an individual retirement account or annuity.

The Code generally allows the rollover of most distributions to and from tax-qualified plans, tax-sheltered annuities, Individual Retirement Annuities and eligible deferred compensation plans of state or local governments. Distributions which may not be rolled over are those which are:

- (a) one of a series of substantially equal annual (or more frequent) payments made (a) over the life or life expectancy of the employee, (b) the joint lives or joint life expectancies of the employee and the employee's beneficiary, or (c) for a specified period of ten years or more;
- (b) a Required Minimum Distribution; or
- (c) a hardship withdrawal.

JACKSON TAXATION

We will pay company income taxes on the taxable corporate earnings created by this separate account product adjusted for various permissible deductions and certain tax benefits discussed below. While we may consider company income tax liabilities and tax

benefits when pricing our products, we do not currently include our income tax liabilities in the charges you pay under the Contract. We will periodically review the issue of charging for these taxes and may impose a charge in the future.

In calculating our corporate income tax liability, we derive certain corporate income tax benefits associated with the investment of company assets, including separate account assets that are treated as company assets under applicable income tax law. These benefits reduce our overall corporate income tax liability. Under current law, such benefits may include dividends received deductions and foreign tax credits which can be material. We do not pass these benefits through to the separate accounts, principally because: (i) the great bulk of the benefits results from the dividends received deduction, which involves no reduction in the dollar amount of dividends that the separate account receives; (ii) product owners are not the owners of the assets generating the benefits under applicable income tax law; and (iii) we do not currently include company income taxes in the charges owners pay under the products.

OTHER INFORMATION

Dollar Cost Averaging. If the amount allocated to the Investment Divisions plus the amount allocated to a Fixed Account Option is at least \$15,000, you can arrange to have a dollar amount or percentage of money periodically transferred automatically into the Investment Divisions and other Fixed Account Options (if currently available) (each a "Designated Option") from the one-year Fixed Account Option (if currently available) or any of the Investment Divisions (each a "Source Option"). If we impose any transfer restrictions on the one-year Fixed Account Option as discussed in numbered paragraphs 1-4 under "Transfers and Frequent Transfer Restrictions," then (i) the one-year Fixed Account Option can be used as a Source Option for Dollar Cost Averaging only with respect to new Premiums that are allocated to that Source Option, (ii) only a twelve-month Dollar Cost Averaging period may be selected, (iii) transfers out of the one-year Fixed Account Option pursuant to such Dollar Cost Averaging will not count against the maximum amount limitations we have imposed on transfers out of the one-year Fixed Account Option and (iv) transfers from that Source Option other than such scheduled transfers will not be permitted.

To the extent that Fixed Account Options are not available or are otherwise restricted from being a Dollar Cost Averaging Source Option or Designated Option, Dollar Cost Averaging will be exclusively from or to the Investment Divisions. In the case of transfers from the one-year Fixed Account Option or Investment Divisions with a less volatile unit value to the Investment Divisions, Dollar Cost Averaging can let you pay a lower average cost per unit over time than you would receive if you made a one-time purchase. Transfers from the more volatile Investment Divisions may not result in lower average costs and such Investment Divisions may not be an appropriate source of dollar cost averaging transfers in volatile markets.

There is no charge for Dollar Cost Averaging. You may cancel your Dollar Cost Averaging program using whatever methods you use to change your allocation instructions. You should consult with your financial professional with respect to the current availability of Dollar Cost Averaging. Certain restrictions may apply.

Dollar Cost Averaging Plus (DCA+). The DCA+ Fixed Account Option is a "source account" designed for dollar cost averaging transfers to Investment Divisions or systematic transfers to other Fixed Account Options. DCA+ is subject to current availability. A Contract Value of \$15,000 is required to participate. From time to time, we will offer special enhanced interest rates on the DCA+ Fixed Account Option. If a DCA+ Fixed Account Option is selected, monies in the DCA+ Fixed Account Option will be systematically transferred to the Investment Divisions or other Fixed Account Options chosen over a DCA+ term of either twelve months or six months, as you select.

DCA+ is not available on Contracts with the Liquidity Option.

Transfers out of the DCA+ Fixed Account Option other than the automatic DCA+ transfers can be made only if you discontinue use of the DCA+ Fixed Account Option. If we impose any transfer restrictions on the one-year Fixed Account Option as discussed in numbered paragraphs 1-4 under "Transfers and Frequent Transfer Restrictions," then (i) you may not discontinue the DCA+ Fixed Account Option or otherwise transfer or withdraw any amounts from the DCA+ Fixed Account Option, but (ii) automatic transfers pursuant to DCA+ will not count against any maximum amount limitations we have imposed on transfers out of the one-year Fixed Account Option.

There is no charge for DCA+. You may cancel your DCA+ program using whatever methods you use to change your allocation instructions. You should consult with your financial professional with respect to the current availability of the Fixed Account Options and the availability of DCA+. Certain restrictions may apply.

Earnings Sweep. You can choose to have your earnings transferred automatically on a monthly basis from the one-year Fixed Account Option, if currently available, and the JNL/WMC Government Money Market Investment Division into other Investment Divisions and Fixed Account Options. Earnings Sweep may only be added within 30 days of the Issue Date of your Contract.

There is no charge for Earnings Sweep. You may cancel your Earnings Sweep program using whatever methods you use to change your allocation instructions. You should consult with your financial professional with respect to the current availability of Earnings Sweep. Certain restrictions may apply.

Rebalancing. You can arrange to have us automatically reallocate your Contract Value among Investment Divisions and the one-year Fixed Account Option (if currently available) periodically to maintain your selected allocation percentages. Rebalancing will terminate if your rebalancing program includes the one-year Fixed Account Option and (i) we impose any transfer restrictions on the one-year Fixed Account Option as discussed in numbered paragraphs 1-4 under "Transfers and Frequent Transfer Restrictions" or (ii) we exercise our right to require that any Premiums allocated to the one-year Fixed Account Option be automatically transferred out of that option over a period of time that we specify. In that case, however, you could re-elect automatic rebalancing without the one-year Fixed Account Option. Rebalancing is consistent with maintaining your allocation of investments among market segments, although it is accomplished by reducing your Contract Value allocated to the better performing Investment Divisions.

There is no charge for rebalancing. You may cancel your rebalancing program using whatever methods you use to change your allocation instructions. You should consult with your financial professional with respect to the current availability of rebalancing. Certain restrictions may apply.

Free Look. You may return your Contract to the selling agent or us within ten days (or longer if required by your state) after receiving it. We will return

- Premiums paid to the Fixed Account, less any withdrawals from the Fixed Account, plus
- the Separate Account Contract Value, *plus*
- any fees and expenses deducted from the Premiums.

We will determine the Contract Value in the Investment Divisions as of the date we receive the Contract (subject to State variations). We will return Premium payments where required by law. We will pay the applicable free look proceeds within seven days of a request in Good Order. If a Premium payment made by personal check or electronic draft is received within the five days preceding a free look request, we may delay payment of the free look proceeds up to seven days after the date of the request, to ensure the check or electronic draft is not returned due to insufficient funds. In some states, we are required to hold the Premiums of a senior citizen in the Fixed Account during the free look period, unless we are specifically directed to allocate the Premiums to the Investment Divisions. State laws vary; your free look rights will depend on the laws of the state in which you purchased the Contract.

Advertising. From time to time, we may advertise several types of performance of the Investment Divisions.

- *Total return* is the overall change in the value of an investment in an Investment Division over a given period of time.
- Standardized average annual total return is calculated in accordance with SEC guidelines.
- **Non-standardized total return** may be for periods other than those required by, or may otherwise differ from, standardized average annual total return. For example, if a Fund has been in existence longer than the Investment Division, we may show non-standardized performance for periods that begin on the inception date of the Fund, rather than the inception date of the Investment Division.
- **Yield** refers to the income generated by an investment over a given period of time.

Performance will be calculated by determining the percentage change in the Accumulation Unit value by dividing the increase (decrease) for that unit by the Accumulation Unit value at the beginning of the period. Performance will reflect the deduction of the Core Contract Charge and may reflect the deduction of the annual contract maintenance and withdrawal charges, but will not reflect charges for optional features except in performance data used in sales materials that promote those optional features. The deduction of withdrawal charges and/or the charges for optional features would reduce the percentage increase or make greater any percentage decrease.

Modification of Your Contract. Only our President, Vice President, Secretary or Assistant Secretary may approve a change to or waive a provision of your Contract. Any change or waiver must be in writing. We may change the terms of your Contract without your consent in order to comply with changes in any applicable provisions or requirements of the Internal Revenue Code.

Confirmation of Transactions. We will send you a written statement confirming that a financial transaction, such as a Premium payment, withdrawal, or transfer has been completed. This confirmation statement will provide details about the transaction. Certain transactions which are made on a periodic or systematic basis will be confirmed in a quarterly statement only.

It is important that you carefully review the information contained in the statements that confirm your transactions. If you believe an error has occurred you must notify us in writing within 30 days of receipt of the statement so we can make any appropriate adjustments. If we do not receive notice of any such potential error, we may not be responsible for correcting the error.

Legal Proceedings. Jackson and its subsidiaries are defendants in class actions and a number of civil proceedings arising in the ordinary course of business and otherwise. We do not believe at the present time that any pending action or proceeding will have a material adverse effect upon the Separate Account, Jackson's ability to meet its obligations under the Contracts, or Jackson National Life Distributors LLC's ability to perform its contract with the Separate Account.

APPENDIX A

TRADEMARKS, SERVICE MARKS, AND RELATED DISCLOSURES

"JNL®," "Jackson National®," "Jackson®," "Jackson of NY®" and "Jackson National Life Insurance Company of New York®" are trademarks of Jackson National Life Insurance Company®.

The "S&P 500 Index," "S&P MidCap 400 Index," "S&P SmallCap 600 Index," "Dow Jones Industrial Average," "STANDARD & POOR'S®," "S&P®," "S&P 500®," "S&P MIDCAP 400 Index®," "STANDARD & POOR'S MIDCAP 400 Index®," "S&P SmallCap 600 Index®," and "STANDARD & POOR'S 500®" (collectively, the "Indices") are products of S&P Dow Jones Indices LLC or its affiliates ("SPDJI"), and has been licensed for use by Jackson National Life Insurance Company ("Jackson"). "Dow Jones®", "Dow Jones Industrial Average", "DJIA®", "The Dow®", and "The Dow 10" are service and/or trademarks of Dow Jones Trademark Holdings, LLC ("Dow Jones") and have been licensed to SPDJI and have been sub-licensed for use for certain purposes by Jackson National Life Insurance Company® ("Jackson").

Standard & Poor's[®], S&P[®] and S&P 500[®], S&P MidCap 400[®] and S&P SmallCap 600[®] are registered trademarks of Standard & Poor's Financial Services LLC and the foregoing trademarks have been licensed by SPDJI for use.

The JNL/Mellon S&P 500 Index Fund, JNL/Mellon S&P 400 MidCap Index Fund, JNL/Mellon Small Cap Index Fund, and JNL/Mellon DowSM Index Fund (collectively, the "Products") are not sponsored, endorsed, sold or promoted by SPDJI, Dow Jones, Standard & Poor's Financial Services LLC or any of their respective affiliates (collectively, "S&P Dow Jones Indices").

S&P Dow Jones Indices makes no representation or warranty, express or implied, to the owners of the Products or any member of the public regarding the advisability of investing in securities generally or in the Products particularly or the ability of the Indices to track general market performance. S&P Dow Jones Indices' only relationship to Jackson with respect to the Indices or the Products is the licensing of the Indices and certain trademarks, service marks and/or trade names of S&P Dow Jones Indices and/or its licensors. The Indices are determined, composed and calculated by S&P Dow Jones Indices without regard to Jackson or the Products. S&P Dow Jones Indices have no obligation to take the needs of Jackson or the owners of the Products into consideration in determining, composing or calculating the Indices. S&P Dow Jones Indices are not responsible for and have not participated in the determination of the prices, and amount of the Products or the timing of the issuance or sale of the Products in the determination or calculation of the equation by which the Products are to be converted into cash, surrendered or redeemed, as the case may be. S&P Dow Jones Indices have no obligation or liability in connection with the administration, marketing or trading of the Products. There is no assurance that investment products based on the Indices will accurately track index performance or provide positive investment returns. S&P Dow Jones Indices LLC is not an investment adviser. Inclusion of a security within an index is not a recommendation by S&P Dow Jones Indices to buy, sell, or hold such security, nor is it considered to be investment advice. Notwithstanding the foregoing, CME Group Inc. and its affiliates may independently issue and/or sponsor financial products unrelated to Products currently being issued by Jackson, but which may be similar to and competitive with Products. In addition, CME Group Inc. and its affiliates may trade financial products which are linked to the performance of the Index.

Dow Jones, SPDJI and their respective affiliates do not:

- Sponsor, endorse, sell or promote the Products.
- Recommend that any person invest in the Products.
- Have any responsibility or liability for or make any decisions about the timing, amount or pricing of the Products.
- Have any responsibility or liability for the administration, management or marketing of the Products.
- Consider the needs of the Products or the owners of the Products in determining, composing or calculating the Indexes or have any obligation to do so.

Dow Jones, SPDJI and their respective affiliates will not have any liability in connection with the Products. Specifically,

- Dow Jones, SPDJI and their respective affiliates do not make any warranty, express or implied, and Dow Jones, SPDJI and their respective affiliates disclaim any warranty about:
 - The results to be obtained by the Products, the owners of the Products or any other person in connection with the use of the DJIA and the data included in the Indexes;
 - The accuracy or completeness of the Indexes and its data;
 - The merchantability and the fitness for a particular purpose or use of the Indexes and its data;

- Dow Jones, SPDJI and/or their respective affiliates will have no liability for any errors, omissions or interruptions in the Indexes or its data;
- Under no circumstances will Dow Jones, SPDJI and/or their respective affiliates be liable for any lost profits or indirect, punitive, special or consequential damages or losses, even if they know that they might occur.

The licensing agreement relating to the use of the Indexes and trademarks referred to above by Jackson and SPDJI is solely for the benefit of the Products and not for any other third parties.

S&P DOW JONES INDICES DO NOT GUARANTEE THE ADEQUACY, ACCURACY, TIMELINESS AND/OR THE COMPLETENESS OF THE INDICES OR ANY DATA RELATED THERETO OR ANY COMMUNICATION, INCLUDING BUT NOT LIMITED TO, ORAL OR WRITTEN COMMUNICATION (INCLUDING ELECTRONIC COMMUNICATIONS) WITH RESPECT THERETO. S&P DOW JONES INDICES SHALL NOT BE SUBJECT TO ANY DAMAGES OR LIABILITY FOR ANY ERRORS, OMISSIONS, OR DELAYS IN CALCULATING THE INDICES. S&P DOW JONES INDICES MAKE NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES, OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE OR AS TO RESULTS TO BE OBTAINED BY JACKSON OR OWNERS OF THE PRODUCTS, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE INDICES OR WITH RESPECT TO ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT WHATSOEVER SHALL S&P DOW JONES INDICES BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, PUNITIVE, OR CONSEQUENTIAL DAMAGES INCLUDING BUT NOT LIMITED TO, LOSS OF PROFITS, TRADING LOSSES, LOST TIME OR GOODWILL, EVEN IF THEY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, WHETHER IN CONTRACT, TORT, STRICT LIABILITY, OR OTHERWISE. THERE ARE NO THIRD PARTY BENEFICIARIES OF ANY AGREEMENTS OR ARRANGEMENTS BETWEEN S&P DOW JONES INDICES AND JACKSON, OTHER THAN THE LICENSORS OF S&P DOW JONES INDICES.

SPDR[®] is a registered trademark of Standard & Poor's Financial Services LLC.

Goldman Sachs is a registered service mark of Goldman, Sachs & Co.

DoubleLine is a registered service mark of DoubleLine Capital LP.

The Product(s) is not sponsored, endorsed, sold or promoted by Nasdaq, Inc. or its affiliates (Nasdaq, with its affiliates, are referred to as the "Corporations"). The Corporations have not passed on the legality or suitability of, or the accuracy or adequacy of descriptions and disclosures relating to, the Product(s). The Corporations make no representation or warranty, express or implied to the owners of the Product(s) or any member of the public regarding the advisability of investing in securities generally or in the Product(s) particularly, or the ability of the Nasdaq-100[®] Index to track general stock market performance. The Corporations' only relationship to Jackson National Life Insurance Company ("Licensee") is in the licensing of the NASDAQ[®], and Nasdaq-100[®] IndexTM registered trademarks, and certain trade names of the Corporations and the use of the Nasdaq-100[®] Index which is determined, composed and calculated by NASDAQ without regard to Licensee or the Product(s). Nasdaq has no obligation to take the needs of the Licensee or the owners of the Product(s) into consideration in determining, composing or calculating the Nasdaq-100[®] Index. The Corporations are not responsible for and have not participated in the determination of the timing of, prices at, or quantities of the Product(s) to be issued or in the determination or calculation of the equation by which the Product(s) is to be converted into cash. The Corporations have no liability in connection with the administration, marketing or trading of the Product(s).

THE CORPORATIONS DO NOT GUARANTEE THE ACCURACY AND/OR UNINTERRUPTED CALCULATION OF THE NASDAQ-100® INDEX OR ANY DATA INCLUDED THEREIN. THE CORPORATIONS MAKE NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY LICENSEE, OWNERS OF THE PRODUCT(S), OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE NASDAQ-100® INDEX OR ANY DATA INCLUDED THEREIN. THE CORPORATIONS MAKE NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIM ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE NASDAQ-100® INDEX OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL THE CORPORATIONS HAVE ANY LIABILITY FOR ANY LOST PROFITS OR SPECIAL, INCIDENTAL, PUNITIVE, INDIRECT, OR CONSEQUENTIAL DAMAGES, EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

NASDAQ[®], and Nasdaq-100[®] IndexTM, are registered trademarks of Nasdaq, Inc. (which with its affiliates is referred to as the "Corporations") and are licensed for use by Jackson National Life Insurance Company. The JNL/Mellon Nasdaq[®] 100 Index Fund has not been passed on by the Corporations as to their legality or suitability. The JNL/Mellon Nasdaq[®] 100 Index Fund is not issued, endorsed, sold, or promoted by the Corporations. **THE CORPORATIONS MAKE NO WARRANTIES AND BEAR NO LIABILITY WITH RESPECT TO THE JNL/MELLON NASDAO[®] 100 INDEX FUND.**

PROSPECTUS

April 27, 2020 JNL® SERIES TRUST

Business Address: 1 Corporate Way • Lansing, Michigan 48951 Mailing Address: 225 W. Wacker Drive • Chicago, Illinois 60606

This Prospectus provides you with the basic information you should know before investing in the JNL Series Trust ("Trust").

The shares of the Trust are sold to life insurance company separate accounts and other registered investment companies to fund the benefits of variable annuity contracts and variable life insurance policies. Shares of the Trust may also be sold directly to non-qualified retirement plans and to other affiliated funds. The Trust currently offers shares in the following separate Funds ("Fund" or "Funds"), each with its own investment objective. For U.S. federal income tax purposes, the Funds are classified as partnerships or regulated investment companies as follows.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

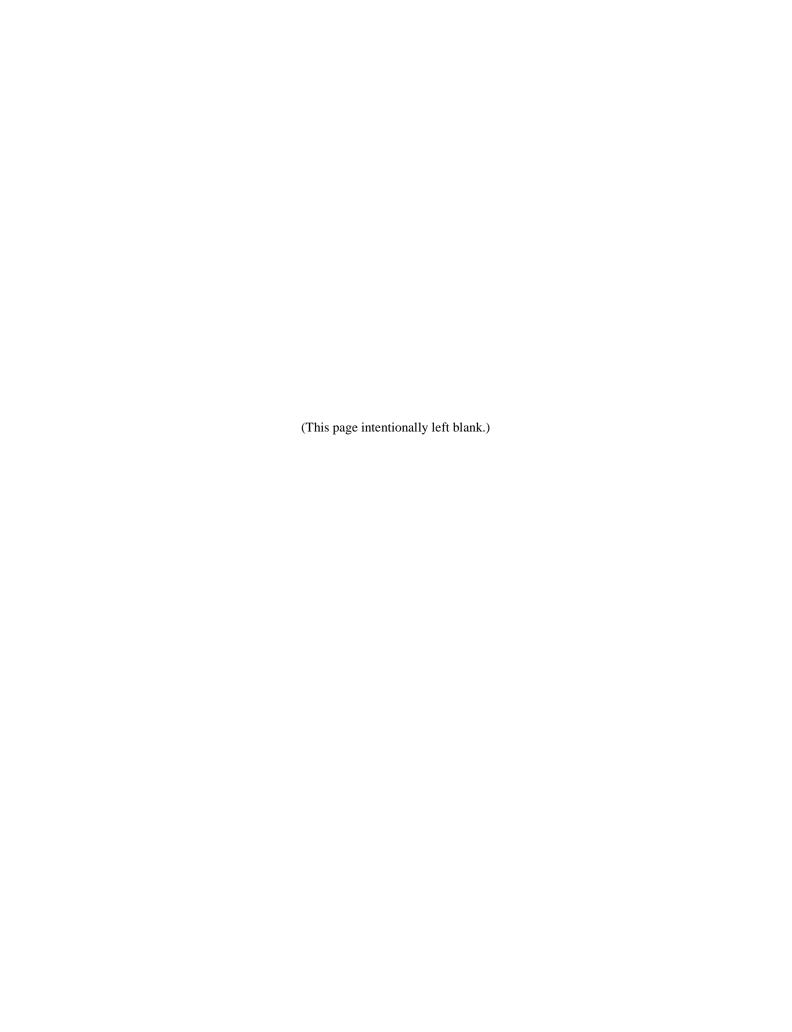

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

For a description of the certain differences between the Partnership Funds and the Regulated Investment Company Funds, refer to the section entitled "Tax Status."

The Securities and Exchange Commission ("SEC") and the Commodity Futures Trading Commission ("CFTC") have not approved or disapproved these securities or determined if this Prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

For more detailed information about the Trust and the Funds, see the Trust's Statement of Additional Information ("SAI") dated April 27, 2020, which is incorporated by reference into (which means it legally is a part of) this prospectus.

Summary Prospectus – April 27, 2020

JNL/American Funds Balanced Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The Fund ("Feeder Fund") seeks high total return (including income and capital gains) consistent with preservation of capital over the long term through exclusive investment in the shares of the American Funds Insurance Series® - Asset Allocation FundsM ("Master Fund").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A ¹
Management Fee	0.79%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ²	0.15%
Total Annual Fund Operating Expenses ³	1.24%
Less Waiver/Reimbursement ⁴	0.30%
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	0.94%

- ¹ The fee table and the example reflect the expenses of both the Fund and the Master Fund.
- ² "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ³ Expense information has been restated to reflect current fees.
- ⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

Expense Example. ⁽¹⁾ This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/American Funds Balanced Fund Class A			
1 year	3 years	5 years	10 years
\$96	\$364	\$652	\$1,474

⁽¹⁾ The example reflects the aggregate expenses of both the Fund and the Master Fund.

Portfolio Turnover (% of average value of portfolio). The Fund, which operates as a "feeder fund," does not pay transaction costs, such as commissions, when it buys and sells shares of the Master Fund (or "turns over" its portfolio). The Master Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's and Master Fund's performance. The following table shows the Master Fund's portfolio turnover rate during the most recent fiscal year.

Period	Master Fund	
1/1/2019 - 12/31/2019	79%	

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund.

The Master Fund is designed for investors seeking high total return (including income and capital gains) consistent with preservation of capital over the long term.

The Master Fund varies its mix of equity securities, debt securities and money market instruments. Under normal market conditions, the Master Fund expects (but is not required) to maintain an investment mix falling within the following ranges: 40%-80% in equity securities, 20%-50% in debt securities and 0%-40% in money market instruments and cash. As of December 31, 2019, the Master Fund was approximately 65% invested in equity securities, 30% invested in debt securities and 5% invested in money market instruments and cash. The proportion of equities, debt and money market securities held by the Master Fund varies with market conditions and the Master Fund's investment adviser's assessment of their relative attractiveness as investment opportunities.

The Master Fund invests in a diversified portfolio of common stocks and other equity securities, bonds and other intermediate and long-term debt securities, and money market instruments (debt securities maturing in one year or less). The Master Fund may invest up to 15% of its assets in common stocks and other equity securities of issuers domiciled outside the United States and up to 5% of its assets in debt securities of issuers domiciled outside the United States. In addition, the Master Fund may invest up to 25% of its debt assets in lower quality debt securities (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the Master Fund or unrated but determined to be of equivalent quality by the Master Fund). Such securities are sometimes referred to as "junk bonds."

The Master Fund uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the Master Fund is divided into segments managed by individual portfolio managers.

The Fund relies on the professional judgment of its Master Fund to make decisions about the Master Fund's portfolio investments. The basic investment philosophy of the Master Fund is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. The Master Fund believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers and competitors. Securities may be sold when the Master Fund's investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

Accounting risk – The Master Fund bases investment selections, in part, on information drawn from the financial statements of
issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting
standards and may affect the ability of the Master Fund's investment manager to identify appropriate investment opportunities.

- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Debt securities ratings risk The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Income risk* The Fund is subject to the risk that the income generated from the Fund's investments may decline in the event of falling interest rates. Income risk may be high if the Fund's income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund's distributions to shareholders may decline when interest rates fall.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Master Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Master Fund's Adviser's investment techniques could fail to achieve the Master Fund's investment objective or negatively affect the Master Fund's investment performance.

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

Performance. Prior to April 24, 2017, the Fund was managed by JNAM and implemented its investment strategy directly through a sub-adviser. Effective April 24, 2017, the Fund operates as a "feeder fund" of the Master Fund. For periods prior to January 1, 2018, the Fund's performance information set forth below is the performance of the Master Fund and reflects the fees for Class A shares of the Fund, as shown in the Annual Fund Operating Expenses Tables above. The performance information set forth below has not been adjusted to show the effects of the Fund's expense waiver/reduction arrangements. If such arrangements had been included, performance for those periods would have been higher. The data below shows what the Fund's performance would have been if the Fund had operated as a "feeder fund" during the periods shown below.

For periods following January 1, 2018, the Fund's performance information set forth below is the performance of the Feeder Fund. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

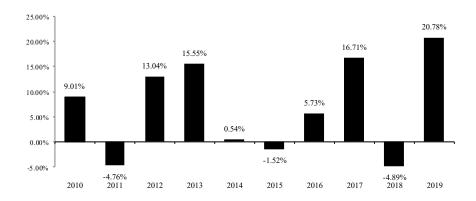

Effective April 27, 2020, for consistency with the Fund's principal investment strategies, the Fund will replace the MSCI All Country World Index with the S&P 500 Index as the Fund's primary benchmark.

Effective April 27, 2020, for consistency with the Fund's principal investment strategies, the Fund will replace the 65% MSCI All Country World Index/35% Bloomberg Barclays Global Aggregate Index with the 60% S&P 500 Index/40% Bloomberg Barclays U.S. Aggregate Index as the Fund's secondary benchmark.

Effective April 27, 2020, for consistency with the Fund's principal investment strategies, the Fund will replace the Bloomberg Barclays Global Aggregate Index with the Bloomberg Barclays U.S. Aggregate Index as the Fund's tertiary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the

broker-dealer or other intermediary and visit your financial intermediary's Webs	ite for more information	ommend the Fund ove 1.	er another investment.	Ask your salesperson or

Summary Prospectus – April 27, 2020

JNL/American Funds Blue Chip Income and Growth Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The Fund ("Feeder Fund") seeks both income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing through exclusive investment in the shares of the American Funds Insurance Series® - Blue Chip Income and Growth Fund SM ("Master Fund").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses				
(Expenses that you pay each year as a percentage of the value of your investment)				
	Class A ¹			
Management Fee	0.96%			
Distribution and/or Service (12b-1) Fees	0.30%			
Other Expenses ²	0.14%			
Total Annual Fund Operating Expenses ³	1.40%			
Less Waiver/Reimbursement ⁴	0.38%			
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	1.02%			

- ¹ The fee table and the example reflect the expenses of both the Fund and the Master Fund.
- ² "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ³ Expense information has been restated to reflect current fees.
- ⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

Expense Example. ⁽¹⁾ This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/American Funds® Blue Chip Income and Growth Fund Class A				
1 year	3 years	5 years	10 years	
\$104	\$406	\$730	\$1,647	

⁽¹⁾ The example reflects the aggregate expenses of both the Fund and the Master Fund.

Portfolio Turnover (% of average value of portfolio). The Fund, which operates as a "feeder fund," does not pay transaction costs, such as commissions, when it buys and sells shares of the Master Fund (or "turns over" its portfolio). The Master Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's and Master Fund's performance. The following table shows the Master Fund's portfolio turnover rate during the most recent fiscal year.

Period	Master Fund
1/1/2019 - 12/31/2019	37%

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund.

The Master Fund is designed for investors seeking both income and capital appreciation.

Normally, the Master Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in dividend-paying common stocks of larger, more established companies domiciled in the United States with market capitalizations greater than \$4 billion. The Master Fund considers these types of investments to be "blue chip" stocks.

The Master Fund also will ordinarily invest at least 90% of its equity assets in the stock of companies whose debt securities are rated at least investment grade by Nationally Recognized Statistical Rating Organizations designated by the Master Fund or unrated but determined to be of equivalent quality by the Master Fund.

The Master Fund may invest up to 10% of its assets in equity securities of larger companies domiciled outside the United States, so long as they are listed or traded in the United States.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Master Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Master Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or

investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.

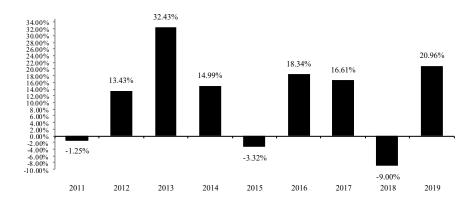

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Managed portfolio risk As an actively managed portfolio, the value of the Master Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Master Fund's Adviser's investment techniques could fail to achieve the Master Fund's investment objective or negatively affect the Master Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

- ² "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ³ Expense information has been restated to reflect current fees.
- ⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

Expense Example. (1) This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/American Funds Capital Income Builder Fund Class A			
1 year	3 years	5 years	10 years
\$98	\$359	\$641	\$1,444

⁽¹⁾ The example reflects the aggregate expenses of both the Fund and the Master Fund.

Portfolio Turnover (% of average value of portfolio). The Fund, which operates as a "feeder fund," does not pay transaction costs, such as commissions, when it buys and sells shares of the Master Fund (or "turns over" its portfolio). The Master Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's and Master Fund's performance. The following table shows the Master Fund's portfolio turnover rate during the most recent fiscal year.

Period	Master Fund
1/1/2019 - 12/31/2019	72%

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class I shares of the Master Fund.

The Master Fund normally will invest at least 90% of its assets in income-producing securities (with at least 50% of its in common stocks and other equity securities). The Master Fund invests primarily in a broad range of income-producing securities, including common stocks and bonds. In seeking to provide a level of current income that exceeds the average yield on U.S. stocks, the Master Fund generally looks to the average yield on stocks of companies listed on the S&P 500 Index. The Master Fund may also invest significantly in common stocks, bonds and other securities of issuers domiciled outside the United States.

In addition, the Master Fund may invest in bonds and other debt securities of any maturity or duration, including securities issued and guaranteed by the U.S. Government, securities issued by federal agencies and instrumentalities, and securities backed by mortgages or other assets. The Master Fund's debt obligations will consist primarily of investment-grade bonds (rated Baa3 or better or BBB- or better by Nationally Recognized Statistical Rating Organizations, or NRSROs, designated by the Master Fund or unrated but determined to be of equivalent quality by the Master Fund). The Master Fund may invest up to 5% in lower quality, higher yielding debt securities (rated Ba1 or below and BB+ or below by NRSROs or unrated but determined to be of equivalent quality by the Master Fund). Such securities are sometimes referred to as "junk bonds."

The Master Fund uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the Master Fund's portfolio is divided into segments managed by individual managers.

The Feeder Fund relies on the professional judgment of its Master Fund to make decisions about the Master Fund's portfolio investments. The basic investment philosophy of the Master Fund is to seek to invest in attractively valued securities that, in its opinion, represent good, long-term investment opportunities. The Master Fund believes that an important way to accomplish this is through fundamental analysis, which may include meeting with company executives and employees, suppliers, customers, and competitors. Securities may be sold when the Master Fund believes that they no longer represent relatively attractive investment opportunities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Master Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Master Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.

- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Debt securities ratings risk The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services
- Managed portfolio risk As an actively managed portfolio, the value of the Master Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Master Fund's Adviser investment techniques could fail to achieve the Master Fund's investment objective or negatively affect the Master Fund's investment performance.

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

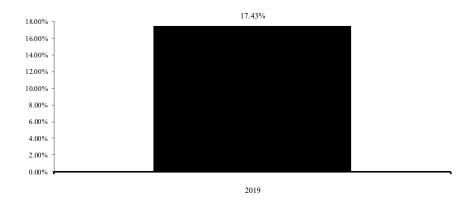

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the 70% MSCI All Country World Index (Net), 30% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/American Funds Capital World Bond Fund

(formerly, JNL/American Funds Global Bond Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The Fund ("Feeder Fund") seeks, over the long term, a high level of total return consistent with prudent investment management through exclusive investment in the shares of the American Funds Insurance Series® - Capital World Bond FundSM ("Master Fund"). Total return comprises the income generated by the Master Fund and the changes in the market value of the Master Fund's investments.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees

(fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
C production of the production of the contract	Class A ¹
Management Fee	1.04%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ²	0.16%
Total Annual Fund Operating Expenses ³	1.50%
Less Waiver/Reimbursement ⁴	0.43%
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	1.07%

- ¹ The fee table and the example reflect the expenses of both the Fund and the Master Fund.
- ² "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ³ Expense information has been restated to reflect current fees.
- ⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or

elimination of the waiver.

Expense Example. (1) This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/American Funds Capital World Bond Fund Class A			
1 year	3 years	5 years	10 years
\$109	\$432	\$778	\$1,754

⁽¹⁾ The example reflects the aggregate expenses of both the Fund and the Master Fund.

Portfolio Turnover (% of average value of portfolio). The Fund, which operates as a "feeder fund," does not pay transaction costs, such as commissions, when it buys and sells shares of the Master Fund (or "turns over" its portfolio). The Master Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's and Master Fund's performance. The following table shows the Master Fund's portfolio turnover rate during the most recent fiscal year.

Period	Master Fund
1/1/2019 - 12/31/2019	159%

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund.

The Master Fund is designed for investors seeking returns through a portfolio of debt securities issued by companies based around the world.

The Master Fund seeks to provide you, over the long term, with as high a level of total return as is consistent with prudent management, by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in bonds, and other debt securities, which may be represented by other investment instruments, including derivatives. The Master Fund invests primarily in debt securities of governmental, supranational and corporate issuers denominated in various currencies, including U.S. dollars. The Master Fund may invest substantially in securities of issuers domiciled outside the United States, including issuers domiciled in developing countries.

Normally, the Master Fund's invests substantially in investment-grade bonds (rated Baa3 or better or BBB- or better by Nationally Recognized Statistical Rating Organizations designated by the Master Fund's investment adviser or unrated but determined to be of equivalent quality by the Master Fund's investment adviser). The Master Fund may also invest up to 25% of its assets in lower quality, higher yielding debt securities (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the Master Fund's investment advisor or unrated but determined to be of equivalent quality by the Master Fund's investment adviser). Such securities are sometimes referred to as "junk bonds." The total return of the Master Fund will be the result of interest income, changes in the market value of the Master Fund's investments and changes in the value of other currencies relative to the U.S. dollar.

The Master Fund is non-diversified, which allows it to invest a greater percentage of its assets in any one issuer than would otherwise be the case. However, the Master Fund intends to limit its investments in the securities of any single issuer.

An investment in the Master Fund is subject to risks, including the possibility that the value of the Master Fund's portfolio holdings may fluctuate in response to economic, political or social events in the United States or abroad.

The Fund may invest in certain derivative instruments, such as forward currency contracts, futures contracts and swaps. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The Fund may invest in a derivative only if, in the opinion of the Adviser of the Master Fund, the expected risks and rewards of the proposed investment are consistent with the investment objective and strategies of the Fund.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Master Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Master Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Debt securities ratings risk The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities.

Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Government regulatory risk Certain industries or sectors, including, but not limited to, real estate, financial services, utilities, oil and natural gas exploration and production, and health care are subject to increased regulatory requirements. There can be no guarantee that companies in which the Fund invests will meet all applicable regulatory requirements. Certain companies could incur substantial fines and penalties for failing to meet government regulatory requirements. These requirements may also result in additional compliance expenses and costs. Such increased regulatory compliance costs could hurt a company's performance.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Master Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Master Fund's Adviser's investment techniques could fail to achieve the Master Fund's investment objective or negatively affect the Master Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

- *Portfolio turnover risk* Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Swaps risk Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject to the general risks relating to derivatives described herein. The Dodd–Frank Act mandates a new regulatory framework for trading swaps in the United States. Standardized swaps will be required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The regulations to implement the Dodd-Frank Act are still being developed so there may be further changes to the system intended to safeguard the collateral of parties to swaps.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

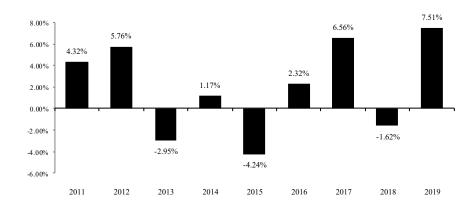

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 27, 2020, for consistency with the Fund's principal investment strategies, the Fund added the Consumer Price Index as the Fund's secondary benchmark.

Annual Total Returns as of December 31

Class A

Best Quarter (ended 3/31/2016): 5.25%; Worst Quarter (ended 12/31/2016): -6.29%

Average Annual Total Returns as of 12/31/2019

			Life of Fund (May 03,
	1 year	5 year	2010)
JNL/American Funds Capital World Bond Fund (Class A)	7.51%	2.01%	2.34%
Bloomberg Barclays Global Aggregate Index (reflects no deduction for fees, expenses, or			
taxes)	6.84%	2.31%	2.60%
Consumer Price Index (reflects no deduction for fees, expenses, or taxes)*	2.29%	1.82%	1.72%

^{*} The Consumer Price Index since inception annualized return data is only available for monthly periods. The since inception annualized return for the Index begins on May 31, 2010, the first available date following the Fund's inception. The Fund's performance for the period beginning on May 31, 2010 was 2.55%.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

Currently, JNAM provides those services that are normally provided by a fund's investment adviser with the exception of portfolio management. See the Additional Information About Each Fund section for more information regarding management of the Fund.

Investment Adviser to the Master Fund:

Capital Research and Management Company ("CRMC")

Portfolio Managers:

	Joined Fund Management	
Name:	Team In:	Title:
Andrew A. Cormack	January 2019	Vice President, Capital Fixed Income Investors ("CFII"),
		CRMC
David A. Daigle	November 2014	Partner, Capital Fixed Income Investors ("CFII"), CRMC
Thomas H. Høgh	May 2010	Partner, CFII, CRMC
Robert H. Neithart	2012	Partner, CFII, CRMC

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/American Funds Global Small Capitalization Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The Fund ("Feeder Fund") seeks growth of capital over time through exclusive investment in the shares of the American Funds Insurance Series® - Global Small Capitalization Fund SM ("Master Fund").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A ¹	
Management Fee	1.35%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ²	0.16%	
Total Annual Fund Operating Expenses ³	1.81%	
Less Waiver/Reimbursement ⁴	0.50%	
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	1.31%	

- ¹ The fee table and the example reflect the expenses of both the Fund and the Master Fund.
- ² "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ³ Expense information has been restated to reflect current fees.
- ⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

Expense Example. ⁽¹⁾ This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/American Funds Global Small Capitalization Fund Class A			
1 year 3 years 5 years 10 years			
\$133	\$521	\$933	\$2,086

⁽¹⁾ The example reflects the aggregate expenses of both the Fund and the Master Fund.

Portfolio Turnover (% of average value of portfolio). The Fund, which operates as a "feeder fund," does not pay transaction costs, such as commissions, when it buys and sells shares of the Master Fund (or "turns over" its portfolio). The Master Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's and Master Fund's performance. The following table shows the Master Fund's portfolio turnover rate during the most recent fiscal year.

Period	Master Fund
1/1/2019 - 12/31/2019	50%

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund. Normally, the Master Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in growth-oriented common stocks and other equity-type securities of companies with small market capitalizations, measured at the time of purchase. However, the Master Fund's holdings of small capitalization stocks may fall below the 80% threshold due to subsequent market action. The Master Fund currently defines "small market capitalization" companies as companies with market capitalizations of \$6 billion or less. The Master Fund periodically re-evaluates and adjusts this definition and may continue to do so in the future. The Master Fund seeks to invest globally; the Master Fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but in no fewer than three countries). Under normal market conditions, the Master Fund will invest significantly in issuers domiciled outside the United States (i.e. at least 40% of its net assets, unless market conditions are not deemed favorable by the Master Fund, in which case the Master Fund would invest at least 30% of its net assets in issuers outside the United States).

Under normal circumstances, the Master Fund invests a significant portion of its assets outside the United States. The Master Fund normally invests a portion of its assets in common stocks and other securities (such as preferred stocks, convertible preferred stocks and convertible bonds) of companies in emerging market countries and expects to be invested in numerous countries around the world.

The Master Fund is designed for investors seeking capital appreciation through stocks. Investors in the Master Fund should have a long-term perspective and, for example, be able to tolerate potentially sharp, short-term declines in value.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Master Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Master Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The

value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.

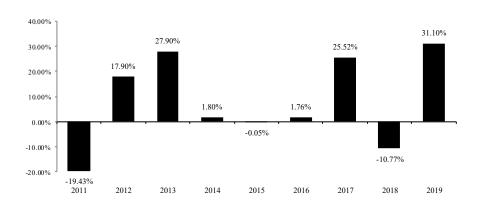

- Managed portfolio risk As an actively managed portfolio, the value of the Master Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Master Fund's Adviser's investment techniques could fail to achieve the Master Fund's investment objective or negatively affect the Master Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/American Funds® Global Growth Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund ("Feeder Fund") is to seek long-term growth of capital through exclusive investment in Class 1 shares of the American Funds Insurance Series® - Global Growth FundSM (the "Master Fund").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A ¹	
Management Fee	1.17%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ²	0.15%	
Total Annual Fund Operating Expenses ³	1.62%	
Less Waiver/Reimbursement ⁴	0.50%	
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	1.12%	

- ¹ The fee table and the example reflect the expenses of both the Fund and the Master Fund.
- ² "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ³ Expense information has been restated to reflect current fees.
- ⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

Expense Example. (1) This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/American Funds® Global Growth Fund Class A			
1 year	3 years	5 years	10 years
\$114	\$462	\$834	\$1,880

⁽¹⁾ The example reflects the aggregate expenses of both the Fund and the Master Fund.

Portfolio Turnover (% of average value of portfolio). The Fund, which operates as a "feeder fund," does not pay transaction costs, such as commissions, when it buys and sells shares of the Master Fund (or "turns over" its portfolio). The Master Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's and Master Fund's performance. The following table shows the Master Fund's portfolio turnover rate during the most recent fiscal year.

Period	Master Fund
1/1/2019 - 12/31/2019	14%

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund.

The Master Fund invests primarily in common stocks of companies around the world that have the potential for growth. As a fund that seeks to invest globally, the Master Fund will allocate its assets among securities of companies domiciled in various countries, including the United States and foreign countries, including emerging market countries. Under normal market conditions, the Master Fund will invest significantly in issuers domiciled outside the United States (i.e., at least 40% of its net assets, unless market conditions are not deemed favorable by the Master Fund, in which case the Master Fund would invest at least 30% of its net assets in issuers domiciled outside of the United States). The Master Fund expects to be invested in numerous countries (no fewer than three countries).

Although the Master Fund focuses on investments in medium to larger capitalization companies, the Master Fund's investments are not limited to a particular capitalization size.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Master Fund include:

- Accounting risk The Master Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Master Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or

other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Master Fund could decline if the financial condition of the companies the Master Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Managed portfolio risk As an actively managed portfolio, the value of the Master Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Master Fund's Adviser's investment techniques could fail to achieve the Master Fund's investment objective or negatively affect the Master Fund's investment performance.

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

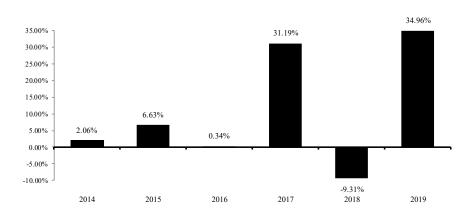

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/American Funds Global Growth Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/American Funds Growth-Income Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The JNL/American Funds Growth-Income Fund ("Fund" or "Feeder Fund") seeks long-term growth of capital and income through exclusive investment in the shares of the American Funds Insurance Series® - Growth-Income FundSM ("Master Fund").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Appl	icable
----------	--------

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A ¹	
Management Fee	0.81%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ²	0.14%	
Total Annual Fund Operating Expenses ³	1.25%	
Less Waiver/Reimbursement ⁴	0.30%	
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	0.95%	

- $^{\,1}\,$ The fee table and the example reflect the expenses of both the Fund and the Master Fund.
- ² "Other Expenses" include an Administrative Fee of 0.09% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ³ Expense information has been restated to reflect current fees.
- ⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

Expense Example. ⁽¹⁾ This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/American Funds Growth-Income Fund Class A			
1 year	3 years	5 years	10 years
\$97	\$367	\$657	\$1,485

⁽¹⁾ The example reflects the aggregate expenses of both the Fund and the Master Fund.

Portfolio Turnover (% of average value of portfolio). The Fund, which operates as a "feeder fund," does not pay transaction costs, such as commissions, when it buys and sells shares of the Master Fund (or "turns over" its portfolio). The Master Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's and Master Fund's performance. The following table shows the Master Fund's portfolio turnover rate during the most recent fiscal year.

Period	Master Fund
1/1/2019 - 12/31/2019	27%

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund. The Master Fund seeks to make your investment grow and provide you with income over time by investing primarily in common stocks or other equity-type securities, such as preferred stocks, convertible preferred stocks and convertible bonds, that the investment adviser to the Master Fund believes demonstrate the potential for appreciation and/or dividends. Although the Master Fund focuses on investments in medium to larger capitalization companies, the Master Fund's investments are not limited to a particular capitalization size.

The Master Fund may invest up to 15% of its assets, at the time of purchase, in securities of issuers domiciled outside the United States, including those located in emerging market countries.

The Master Fund is designed for investors seeking both capital appreciation and income.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Master Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Master Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

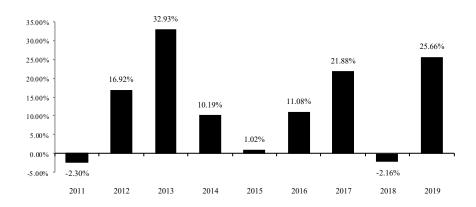

- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Managed portfolio risk As an actively managed portfolio, the value of the Master Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Master Fund's Adviser's investment techniques could fail to achieve the Master Fund's investment objective or negatively affect the Master Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The Fund ("Feeder Fund") seeks growth of capital through exclusive investment in Class 1 shares of the American Funds Insurance Series® - Growth FundSM (the "Master Fund").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A ¹	
Management Fee	0.97%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ²	0.14%	
Total Annual Fund Operating Expenses ³	1.41%	
Less Waiver/Reimbursement ⁴	0.45%	
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	0.96%	

- ¹ The fee table and the example reflect the expenses of both the Fund and the Master Fund.
- ² "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ³ Expense information has been restated to reflect current fees.
- ⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

Expense Example. (1) This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/American Funds® Growth Fund Class A			
1 year	3 years	5 years	10 years
\$98	\$402	\$728	\$1,652

⁽¹⁾ The example reflects the aggregate expenses of both the Fund and the Master Fund.

Portfolio Turnover (% of average value of portfolio). The Fund, which operates as a "feeder fund," does not pay transaction costs, such as commissions, when it buys and sells shares of the Master Fund (or "turns over" its portfolio). The Master Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's and Master Fund's performance. The following table shows the Master Fund's portfolio turnover rate during the most recent fiscal year.

Period	Master Fund
1/1/2019 - 12/31/2019	21%

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund.

The Master Fund invests primarily in common stocks and seeks to invest in companies that the Master Fund's investment adviser believes offer superior opportunities for growth of capital. The Master Fund may invest up to 25% of its assets in common stocks and other securities (including convertible and nonconvertible preferred stocks, bonds, and other debt securities) of issuers domiciled outside the U.S.

Although the Master Fund focuses on investments in medium to larger capitalization companies, the Master Fund's investments are not limited to a particular capitalization size.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Master Fund include:

- Accounting risk The Master Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Master Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Master Fund could decline if the financial condition of the companies the Master Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund,

and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Managed portfolio risk As an actively managed portfolio, the value of the Master Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Master Fund's Adviser's investment techniques could fail to achieve the Master Fund's investment objective or negatively affect the Master Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

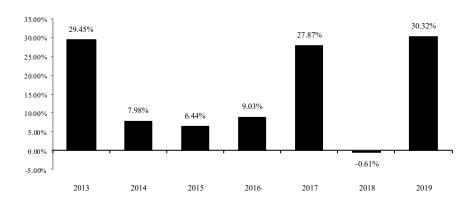

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/American Funds Growth Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Annual Total Returns as of December 31

Class A

Best Quarter (ended 3/31/2019): 13.26%; Worst Quarter (ended 12/31/2018): -14.12%

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/American Funds International Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The Fund ("Feeder Fund") seeks long-term growth of capital through exclusive investment in the shares of the American Funds Insurance Series® - International FundSM ("Master Fund").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A ¹	
Management Fee	1.22%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ²	0.16%	
Total Annual Fund Operating Expenses ³	1.68%	
Less Waiver/Reimbursement ⁴	0.50%	
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	1.18%	

- ¹ The fee table and the example reflect the expenses of both the Fund and the Master Fund.
- ² "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ³ Expense information has been restated to reflect current fees.
- ⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

Expense Example. (1) This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/American Funds International Fund Class A			
1 year	3 years	5 years	10 years
\$120	\$481	\$866	\$1,945

⁽¹⁾ The example reflects the aggregate expenses of both the Fund and the Master Fund.

Portfolio Turnover (% of average value of portfolio). The Fund, which operates as a "feeder fund," does not pay transaction costs, such as commissions, when it buys and sells shares of the Master Fund (or "turns over" its portfolio). The Master Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's and Master Fund's performance. The following table shows the Master Fund's portfolio turnover rate during the most recent fiscal year.

Period	Master Fund
1/1/2019 - 12/31/2019	32%

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund. The Master Fund seeks to make your investment grow over time by investing primarily in common stocks of companies domiciled outside the United States, including companies domiciled in emerging markets, that the investment adviser of the Master Fund believes have the potential for growth.

The Master Fund may also invest in securities of foreign issuers in the form of depositary receipts or other instruments by which the Master Fund may obtain exposure to equity investments in local markets. Although the Master Fund focuses on investments in medium to larger capitalization companies, the Master Fund's investments are not limited to a particular capitalization size.

The Master Fund is designed for investors seeking capital appreciation through stocks. Investors in the Master Fund should have a long-term perspective and, for example, be able to tolerate potentially sharp, short-term declines in value.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Master Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Master Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks,

investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.

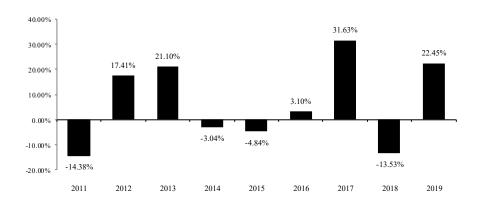

- Managed portfolio risk As an actively managed portfolio, the value of the Master Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Master Fund's Adviser's investment techniques could fail to achieve the Master Fund's investment objective or negatively affect the Master Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/American Funds New World Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The Fund ("Feeder Fund") seeks long-term capital appreciation through exclusive investment in the shares of the American Funds Insurance Series® - New World Fund® ("Master Fund").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A ¹	
Management Fee	1.46%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ²	0.17%	
Total Annual Fund Operating Expenses ³	1.93%	
Less Waiver/Reimbursement ⁴	0.65%	
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	1.28%	

- ¹ The fee table and the example reflect the expenses of both the Fund and the Master Fund.
- ² "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ³ Expense information has been restated to reflect current fees.
- ⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

Expense Example. (1) This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/American Funds New World Fund Class A			
1 year	3 years	5 years	10 years
\$130	\$543	\$982	\$2,201

⁽¹⁾ The example reflects the aggregate expenses of both the Fund and the Master Fund.

Portfolio Turnover (% of average value of portfolio). The Fund, which operates as a "feeder fund," does not pay transaction costs, such as commissions, when it buys and sells shares of the Master Fund (or "turns over" its portfolio). The Master Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's and Master Fund's performance. The following table shows the Master Fund's portfolio turnover rate during the most recent fiscal year.

Period	Master Fund
1/1/2019 - 12/31/2019	38%

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing all of its assets in Class 1 shares of the Master Fund.

The Master Fund is designed for investors seeking capital appreciation over time. The Master Fund may invest in companies without regard to market capitalization, including companies with small market capitalizations. Investors in the Master Fund should have a long-term perspective and, for example, be able to tolerate potentially sharp, short-term declines in value.

The Master Fund may also invest in debt securities of issuers, including issuers of lower-rated bonds (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the Master Fund's investment adviser or unrated but determined to be of equivalent quality by the Master Fund's investment adviser), with exposure to these countries. Bonds rated Ba1 or BB+ or below are sometimes referred to as "junk bonds." Under normal market conditions, the Master Fund will invest at least 35% of its assets in equity and debt securities of issuers primarily based in qualified countries that have developing economies and/or markets. The securities markets of these countries may be referred to as emerging markets. In determining whether a country is qualified, the Master Fund's investment adviser will consider such factors as the country's per capita gross domestic product; the percentage of the country's economy that is industrialized; market capital as a percentage of gross domestic product; the overall regulatory environment; the presence of government regulation limiting or banning foreign ownership; and restrictions on repatriation of initial capital, dividends, interest and/or capital gains. The investment adviser to the Master Fund maintains a list of qualified countries and securities in which the Master Fund may invest.

The Master Fund may invest in equity securities of any company, regardless of where it is based, if the Master Fund's investment adviser determines that a significant portion of the company's assets or revenues (generally 20% or more) is attributable to developing countries. In addition, the Master Fund may invest in nonconvertible debt securities of issuers, including issuers of lower rated bonds and government bonds, primarily based in qualified countries or that have a significant portion of their assets or revenues attributable to developing countries. The Master Fund may also, to a limited extent, invest in securities of issuers based in developing countries not on the investment adviser's list of qualified developing countries.

The Master Fund may also lend portfolio securities to brokers, dealers and other institutions that provide cash or U.S. Treasury securities as collateral in an amount at least equal to the value of the securities loaned.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

Accounting risk – The Master Fund bases investment selections, in part, on information drawn from the financial statements of
issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting
standards and may affect the ability of the Master Fund's investment manager to identify appropriate investment opportunities.

- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Master Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Master Fund's Adviser's investment techniques could fail to achieve the Master Fund's investment objective or negatively affect the Master Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization and small-capitalization investing risk* The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign

stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

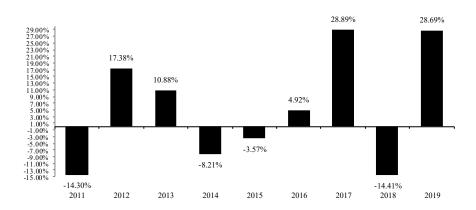

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the MSCI Emerging Markets Index as the Fund's secondary benchmark.

Effective April 27, 2020, for consistency with the Fund's principal investment strategies, the Fund added the JPM EMBI Global Diversified Index as the Fund's tertiary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL Multi-Manager Alternative Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long term growth of capital.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	1.19%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ^{1,2,3}	0.56%	
Acquired Fund Fees and Expenses ⁴	0.09%	
Total Annual Fund Operating Expenses	2.14%	

- ¹ "Other Expenses" include an Administrative Fee of 0.20% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- 2 "Other Expenses" are based on amounts incurred during the period ended December 31, 2019. The amount includes the costs associated with the Fund's short sales on equity securities. When a cash dividend is declared on a security for which the Fund holds a short position, the Fund incurs the obligation to pay an amount equal to that dividend to the lender of the shorted security. In addition, the Fund incurs borrowing fees related to short sale transactions. The annualized ratios of dividend expense on short sales and borrowing fees related to short sales to assets for the period were 0.24%. The Fund's actual dividend expense and borrowing fees on securities sold short in future periods may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's short positions, the actual dividends paid with respect to the securities the Fund sells short, and the actual timing of the Fund's short sale transactions, each of which is expected to vary over time. The annualized ratios of dividend expense on short sales and borrowing fees related to short sales have been restated to reflect current fees.
- ³ "Other Expenses" are based on amounts incurred during the period ended December 31, 2019. The amount includes financing costs associated with secured borrowings. The annualized ratios of financing costs related to secured borrowings were 0.12%. The Fund's actual financing costs may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's involvement with secured borrowings and the costs associated with those transactions, each of which is expected to vary over time.

⁴ Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Multi-Manager Alternative Fund Class A			
1 year	3 years	5 years	10 years
\$217	\$670	\$1,149	\$2,472

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	147%

Principal Investment Strategies. The Fund seeks to achieve its investment objective by allocating among a variety of alternative strategies managed by unaffiliated investment managers ("Sub-Advisers") sometimes referred to as "sleeves." Each of the Sub-Advisers generally provides day-to-day management for a portion of the Fund's assets.

Each Sub-Adviser may use different investment strategies in managing Fund assets, acts independently from the others, and uses its own methodology for selecting investments. The Adviser is responsible for identifying and retaining the Sub-Advisers for the selected strategies and for monitoring the services provided by the Sub-Advisers. The Adviser provides qualitative and quantitative supervision as part of its process for selecting and monitoring the Sub-Advisers. The Adviser is also responsible for selecting the Fund's alternative investment strategies and for determining the amount of Fund assets to allocate to each Sub-Adviser. Based on the Adviser's ongoing evaluation of the Sub-Advisers, it may adjust allocations among Sub-Advisers.

Below are the principal investment strategies for each sleeve, but the Sub-Advisers may also implement other investment strategies in keeping with their respective sleeve's objective.

Equity Long/Short Strategies

First Pacific Advisors, LP ("FPA") pursues a contrarian value strategy that seeks to identify absolute value opportunities across the capital structure, and in a variety of market capitalizations, geographies and sectors with the long-term objective of achieving equity-like rates of return with less risk than the market. Being contrarian in nature means the management team focuses on out-of-favor companies, does not pay close attention to benchmark weightings and is willing to hold meaningful amounts of cash for prolonged periods if opportunities for investment do not present themselves. FPA seeks "value" in companies whose securities are trading at a substantial discount to FPA's estimate of their intrinsic value. Investments typically include common and preferred stock, convertible securities, corporate and high yield bonds, as well as government debt. In addition, FPA may sell securities short.

Boston Partners Global Investors, Inc. ("Boston Partners") pursues a multi-faceted strategy that invests in a long-short portfolio of equity securities and financial investments with equity-like characteristics designed to provide exposure to emerging markets.

Generally, the Boston Partners sleeve invests in futures contracts, futures-related instruments, forwards, swaps and options to provide exposure to asset classes including, but not limited to, global developed and emerging equity, fixed-income and currencies (collectively, "Instruments"). The Fund will also seek to gain exposure to commodity related instruments primarily by investing in JNL Multi-Manager Alternative Fund (Boston Partners) Ltd. ("Subsidiary"), which invests primarily in those futures and swaps (as described more fully below). These Instruments may be used for investment or speculative purposes, hedging or as a substitute for investing in conventional securities. The Fund may also invest in fixed-income securities, money market instruments, and cash. There are no geographic limits on the market exposure of the Fund's assets. This flexibility allows Sub-Adviser to look for investments or gain exposure to asset classes and markets around the world, including emerging markets, that it believes will enhance the Fund's ability to meet its objective.

The Fund may invest up to 25% of the value of its total assets in the Subsidiary. The Subsidiary is a wholly owned and controlled subsidiary of the Fund, organized under the laws of the Cayman Islands as an exempted company. Currently, only the sleeve of the Fund managed by Boston Partners is used for investments in the Subsidiary. Generally, the Subsidiary invests primarily in precious

metals, commodity futures and swaps on commodity futures, but it may also invest in financial futures, option and swap contracts, fixed-income securities, pooled investment vehicles, including those that are not registered pursuant to the 1940 Act, and other investments intended to serve as margin or collateral for the Subsidiary's derivative positions. Boston Partners expects to invest the Fund's assets in the Subsidiary in order to gain exposure to futures contracts traded on the Indian stock exchange. The Fund invests in the Subsidiary in order to gain exposure to the commodities markets within the limitations of the federal tax laws, rules and regulations that apply to regulated investment companies ("RICs").

Loomis, Sayles & Company, L.P. ("Loomis Sayles") invests in equity securities of companies of any market capitalization. While the majority of investments will be long, there may be opportunities where the strategy holds short investments. Under normal market conditions, the strategy will maintain long and short investments in equity securities. As a substitute for short investments, the strategy may utilize market hedging strategies consisting of short exposures to indices, sectors or other securities or assets.

Event Driven and Merger Arbitrage Strategy

Westchester Capital Management, LLC ("Westchester") employs a merger arbitrage strategy ("Merger Arbitrage Strategy") that invests in the common stock, preferred stock, corporate debt, derivatives, total return swaps and/or contracts for difference and, occasionally, warrants of companies which are involved in publicly announced mergers, takeovers, tender offers, leveraged buyouts, spin-offs, liquidations and other corporate reorganizations. The Fund may also invest in special purpose acquisition companies, a form of investment vehicle typically formed for the purpose of acquiring an operating business. Although a variety of strategies may be employed depending upon the nature of the reorganizations selected for investment, the simplest form of merger-arbitrage activity involves purchasing the shares of an announced acquisition target at a discount to their expected value upon completion of the acquisition.

Relative Value Strategies

BlueBay Asset Management LLP ("BlueBay") invests predominantly in below investment grade fixed-income securities worldwide, with a strong bias towards North America and European issuers. The strategy aims to allocate flexibly between bonds and loans, while tactically hedging various credit, interest rate, and currency risks.

DoubleLine Capital LP ("DoubleLine") employs an opportunistic income strategy by allocating investments to fixed-income instruments and other investments with no limit on the duration of the strategy. DoubleLine may invest in, without limitation, asset-backed securities; domestic and foreign corporate bonds, including high-yield bonds; municipal bonds; bonds or other obligations issued by domestic or foreign governments, including emerging markets countries; real estate investment trust ("REIT") debt securities; and mortgage-related securities. When investing in mortgage-related securities, DoubleLine may invest in obligations issued or guaranteed by agencies or instrumentalities of the U.S. Government; collateralized mortgage obligations ("CMOs") issued by domestic or foreign private issuers that represent an interest in or are collateralized by mortgage related securities issued by private issuers that represent an interest in or are collateralized by whole mortgage loans or mortgage related securities without a government guarantee but typically with some form of private credit enhancement; "interest only" and "principal only" stripped mortgage securities; inverse floating rate securities; and debt or equity tranches of collateralized debt obligations collateralized by mortgage related securities.

Lazard Asset Management LLC ("Lazard") invests in convertible securities, preferred securities, equity, and debt, with the objective of current income, long-term capital appreciation and principal protection. Lazard's Portfolio Management Team constructs a diversified portfolio of convertible securities, preferred stocks, equity, and debt that have been evaluated on relative valuation and risk attributes. Lazard may use over-the-counter total return swaps as part of its investment strategy.

Global Macro Strategy

Western Asset Management Company, LLC ("Western Asset") focuses under normal circumstances seeking to achieve its investment objective by implementing an opportunistic investing strategy. Western Asset attempts to identify and capitalize on attractive relative-value opportunities principally in fixed-income markets around the globe by investing in a variety of securities and other instruments. The strategy invests in fixed-income securities, up to 50% below investment-grade and up to 50% in un-hedged non-U.S. investments, and may also invest up to 50% emerging markets.

The Fund may invest in securities and other financial instruments of companies of any market capitalization. The Fund may invest in securities and other financial instruments available in and which have exposure to both U.S. and non-U.S. markets, including emerging markets, which can be U.S. dollar-denominated or non-U.S. dollar-denominated and may be currency hedged or un-hedged. The Fund may invest in corporate loans.

The Fund may invest in securities and other financial instruments of companies of any market capitalization.

The Fund (all sleeves collectively) may invest up to 15% of its net assets in illiquid investments that are assets. The Fund considers investments in private equity securities and hedge funds as illiquid investments.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. (In the descriptions of risks related to investments in commodities - except those describing U.S. federal income tax risks - references to the "Fund" include the Subsidiary as well.) As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.

- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Event driven and special situations risk At times, the Fund may seek to benefit from what are considered "special situations," such as mergers, acquisitions, consolidations, liquidations, spin-offs, tender or exchange offers, reorganizations, restructurings or other unusual events that are expected to affect a particular issuer. Such special situations may involve so-called "distressed companies," the debt obligations of which typically are unrated, lower-rated, in default or close to default. Also, securities of distressed companies are generally more likely to become worthless. There is a risk that the expected change or event might not occur, which could cause the price of the security to fall, perhaps sharply.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Corporate loan, sovereign entity loan, and bank loan risk Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- Convertible securities risk Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations.
- Subsidiary risk By investing in the Subsidiary, the Fund is indirectly exposed to the risks associated with the Subsidiary's investments. The commodity-related instruments held by the Subsidiary are generally similar to those that are permitted to be held by its parent Fund without regard to certain U.S. federal income tax rules and are generally subject to the same risks that apply to similar investments held directly by the Fund (see "Commodity-linked derivatives risk," "Commodities regulatory risk," and "Commodity risk"). There can be no assurance that the investment objective of the Subsidiary will be achieved. The Subsidiary is not registered under the 1940 Act, and, unless otherwise noted in this Prospectus, is not subject to all the investor protections of the 1940 Act. However, the Fund wholly owns and controls the Subsidiary, and the Fund and the Subsidiary are both managed by the Fund's Adviser and Sub-Adviser, making it unlikely that the Subsidiary will take action contrary to the interests of the Fund and its shareholders. Changes in the laws of the United States and/or the Cayman Islands could result in the inability of the Fund and/or the Subsidiary to operate as described in this Prospectus and the Fund's SAI and could affect the Fund.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund,

- and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- LIBOR replacement risk In addition to other interbank offered rates, the most common benchmark rate for floating rate securities is London Interbank Offered Rate (LIBOR), which is the rate of interest offered on short-term interbank deposits, as determined by trading between major international banks. The UK Financial Conduct Authority has announced that LIBOR rates will no longer be published after the end of 2021. The elimination of LIBOR may adversely affect the interest rates on, and value of, certain Fund investments for which the value is tied to LIBOR. Alternatives to LIBOR are established or in development in most major currencies, including the Secured Overnight Financing Rate (SOFR) that is intended to replace U.S. dollar LIBOR. Markets are slowly developing in response to these new reference rates. However, questions around the rate transition's effect on the liquidity of securities and how to appropriately adjust these rates at the time of transition remain undetermined for the Fund. The effects of discontinuation of LIBOR on the Fund will vary, and it is difficult to predict the full impact of the transition away from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new products, instruments and contracts are commercially accepted and market practices become more settled.

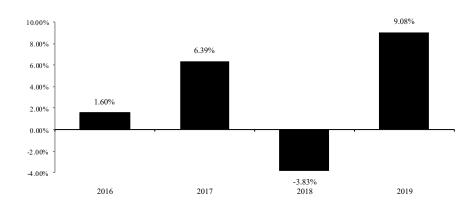

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 27, 2020, the Fund will be combined with JNL Institutional Alt 100 Fund, a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the

Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL Multi-Manager Emerging Markets Equity Fund

(formerly, JNL/Lazard Emerging Markets Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.77%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	1.23%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL Multi-Manager Emerging Markets Equity Fund Class A				
1 year 3 years 5 years 10 years				
	\$125	\$390	\$676	\$1,489

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	25%

Portfolio turnover for the period of January 1, 2019 to December 31, 2019 is from the prior sub-adviser, Lazard Asset Management LLC.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a variety of emerging market equity strategies, sometimes referred to as "sleeves," managed by unaffiliated investment managers ("Sub-Advisers"). Each of the Sub-Advisers generally provides day-to-day management for a portion of the Fund's assets.

Each Sub-Adviser may use different investment strategies in managing Fund assets, acts independently from the others, and uses its own methodology for selecting investments. Jackson National Asset Management, LLC ("JNAM" or "Adviser") is responsible for identifying and retaining the Sub-Advisers for the selected strategies and for monitoring the services provided by the Sub-Advisers. JNAM provides qualitative and quantitative supervision as part of its process for selecting and monitoring the Sub-Advisers. JNAM is also responsible for selecting the Fund's investment strategies and for determining the amount of Fund assets to allocate to each Sub-Adviser. Based on JNAM's ongoing evaluation of the Sub-Advisers, JNAM may adjust allocations among Sub-Advisers.

Below are the principal investment strategies for each sleeve, but the Sub-Advisers may also implement other investment strategies in keeping with their respective sleeve's objective.

T. Rowe Price Emerging Markets Discovery Stock Strategy

T. Rowe Price Associates, Inc. and T. Rowe Price Hong Kong Limited (collectively, "T. Rowe Price") constructs the Emerging Markets Discovery Stock Strategy by investing in stocks issued by companies in emerging markets. T. Rowe Price may invest in companies of any size but generally seeks stocks of mid or larger companies that T. Rowe Price believes are forgotten. T. Rowe Price considers frontier markets to be a subset of emerging markets. T. Rowe Price expects to make most of its investments in stocks of companies located in, or that have economic ties to, the emerging market countries (which include frontier markets) in Asia, Latin America, Europe, Africa, and the Middle East.

WCM Focused Emerging Markets Strategy

WCM Investment Management, LLC ("WCM") constructs the Focused Emerging Markets Strategy by investing in equity securities of non-U.S. domiciled companies or depositary receipts of non-U.S. domiciled companies located in developed countries and in emerging and frontier market countries. WCM's investments in equity securities may include common stocks and depositary receipts. The Fund's investments in depositary receipts may include American, European, Canadian and Global Depositary Receipts ("ADRs", "EDRs", "CDRs", and "GDRs", respectively). ADRs are receipts that represent interests in foreign securities held on deposit by U.S. banks. EDRs and GDRs have the same qualities as ADRs, except that they may be traded in several international trading markets.

Wellington Emerging Markets Research Equity Core Strategy

Wellington Management Company LLP ("Wellington Management") constructs the Emerging Markets Research Equity Core Strategy by investing in equity and equity-related securities issued by companies located in emerging market countries. Wellington Management may invest in equity securities of issuers that, while not domiciled in emerging market countries, have or will have substantial assets in emerging market countries or derive or expect to derive a substantial portion of their total revenues from either goods or services produced in, or sales made in, emerging market countries, including frontier markets. Wellington Management may invest in locally listed common stocks and securities traded in over-the-counter markets, depositary receipts (such as ADRs, EDRs, GDRs, and American Depositary Shares ("ADSs")). Wellington Management will generally invest in mid- and large-capitalization companies. Wellington Management will generally invest in companies above \$2 billion in market capitalization.

Kayne Anderson Rudnick Emerging Markets Small Cap Strategy

Kayne Anderson Rudnick Investment Management, LLC ("KAR") constructs the Emerging Markets Small Cap Strategy by investing in equity or equity-linked securities of small capitalization companies located in emerging markets countries. KAR will invest in a

select group of small-cap companies believed by KAR to be undervalued relative to their future market growth potential. The investment strategy emphasizes companies that KAR believes to have a sustainable competitive advantage, strong management, and low financial risk and to be able to grow over market cycles.

KAR considers small-capitalization companies to be those companies that, at the time of initial purchase for the investment strategy, have market capitalizations of less than \$8 billion. KAR intends to diversify its investments among countries and normally to have represented in the portfolio business activities of a number of different countries. Equity securities in which KAR invests include common stocks, preferred stocks and ADRs/GDRs. KAR does not use allocation models to restrict investments to certain regions, countries, or industries.

The Fund considers a company to be in an emerging or frontier country or market if the company has been organized under the laws of, has its principal offices in, or has its securities principally traded in, the emerging or frontier country or market, or if the company derives at least 50% of its revenues, net profits or incremental revenue growth (typically over the past five years) from, or has at least 50% of assets or production capacities in, the emerging or frontier country or market.

Emerging market countries include, but are not limited to, all countries represented by the MSCI Emerging Markets Index (the "Index"). The Index includes, but is not limited to, the following countries: Argentina, Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Malaysia, Mexico, Pakistan, Peru, Philippines, Poland, Russia, Qatar, Saudi Arabia, South Africa, Taiwan, Thailand, Turkey, and United Arab Emirates.

The Fund generally invests in securities of companies located in different regions and in at least three different countries. The Fund may concentrate, or invest a significant portion of its assets, in the securities of companies in one or a few countries or regions. The Fund may make significant investments in certain sectors or group of sectors within a particular industry or industries from time to time and intends to concentrate its investments in the banking industry.

The Fund may invest in participatory notes.

JNAM also may choose to allocate the Fund's assets to additional strategies in the future. There is no assurance that any or all of the strategies discussed in this prospectus will be used by JNAM or the Sub-Advisers.

JNAM may also manage Fund assets directly to seek to enhance returns, or to hedge and to manage the Fund's cash and short-term instruments.

The Fund has flexibility in the relative weighting of each asset class and expects to vary the percentages of assets invested in each asset class from time to time. JNAM's allocations to the underlying Sub-Advisers will be a function of a variety of factors including each underlying strategy's expected returns, volatility, correlation, and contribution to the Fund's overall risk profile.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Banking industry investment risk Investment in securities issued by banks may be affected by factors influencing the health and performance of the banking industry. These factors may include, among others, economic trends, industry competition and governmental actions, as well as factors affecting the financial stability of borrowers. Bank securities typically are not insured by the U.S. government, foreign governments, or their agencies. Bank securities that do not represent deposits have lower priority in the bank's capital structure than those securities comprised of deposits. This lower priority means that, in the event of insolvency of the bank that issued the security, the security could become worth less than the Fund paid for it.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Government regulatory risk Certain industries or sectors, including, but not limited to, real estate, financial services, utilities, oil and natural gas exploration and production, and health care are subject to increased regulatory requirements. There can be no guarantee that companies in which the Fund invests will meet all applicable regulatory requirements. Certain companies could incur substantial fines and penalties for failing to meet government regulatory requirements. These requirements may also result in additional compliance expenses and costs. Such increased regulatory compliance costs could hurt a company's performance.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign

- stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Participation note risk An investment in a participation note involves additional risks beyond the risks normally associated with a direct investment in the underlying security and a participation note's performance may differ from the underlying security's performance. Holders of participation notes do not have the same rights as an owner of the underlying stock and are subject to the credit risk of the issuer, and participation notes are privately issued and may be illiquid.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. Performance prior to April 27, 2020 reflects the Fund's results when managed by the former sub-adviser, Lazard Asset Management LLC, utilizing a different investment strategy. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

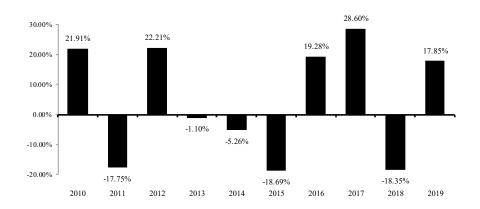

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 27, 2020, the Fund will be combined with JNL/Invesco China-India Fund and JNL/Oppenheimer Emerging Markets Innovator Fund (together, the "Acquired Funds"), each a series of JNL Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Funds.

Effective April 27, 2020, for consistency with the Fund's principal investment strategies, the Fund will replace the MSCI Emerging Markets Index (Net) with the MSCI Emerging Markets IMI Index (Net) as the Fund's primary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL Multi-Manager International Small Cap Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.75%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Total Annual Fund Operating Expenses	1.21%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Multi-Manager International Small Cap Fund Class A				
1 year 3 years 5 years 10 years				
	\$123	\$384	\$665	\$1,466

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	74%

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in international small cap strategies, sometimes referred to as "sleeves," managed by unaffiliated investment managers ("Sub-Advisers"). Both Sub-Advisers generally provide day-to-day management for a portion of the Fund's assets.

Each Sub-Adviser may use different investment strategies in managing Fund assets, acts independently from the others, and uses its own methodology for selecting investments. Jackson National Asset Management, LLC ("JNAM" or "Adviser") is responsible for identifying and retaining the Sub-Advisers for the selected strategies and for monitoring the services provided by the Sub-Advisers. JNAM provides qualitative and quantitative supervision as part of its process for selecting and monitoring the Sub-Advisers. JNAM is also responsible for selecting the Fund's investment strategies and for determining the amount of Fund assets to allocate to each Sub-Adviser. Based on JNAM's ongoing evaluation of the Sub-Advisers, JNAM may adjust allocations among Sub-Advisers.

Below are the principal investment strategies for each sleeve, but the Sub-Advisers may also implement other investment strategies in keeping with their respective sleeve's objective.

WCM International Small Cap Growth Strategy

• WCM Investment Management, LLC ("WCM") constructs the strategy by investing in equity securities or depositary receipts of small capitalization companies domiciled outside of the United States, including in emerging and frontier market countries. WCM considers small capitalization companies to be companies with market capitalizations within the range of those companies included in the Morgan Stanley Capital Index ("MSCI") ACWI ex U.S. Small Cap Index ("Index") at the time of purchase. Because small capitalization companies are defined by reference to the Index, the range of market capitalization of companies in which the WCM International Small Cap Growth Strategy invests may vary with market conditions. WCM will consider the market capitalization range by country. Investments in companies that move above or below the capitalization range of the Index may continue to be held by the WCM International Small Cap Growth Strategy at the Sub-Adviser's discretion.

Causeway International Small Cap Strategy

• Causeway Capital Management LLC ("Causeway") constructs the strategy by investing primarily in common stocks of companies with smaller market capitalizations located in developed and emerging markets outside the U.S. Smaller market capitalization companies have market capitalizations that do not exceed the highest market capitalization of a company within the Index at the time of purchase. As of December 31, 2019, the Index included companies with market capitalizations of up to \$9.2 billion and included companies in both developed and emerging markets outside the U.S. Investments in companies include both developed and emerging markets outside the U.S. Some of these companies, although small compared with larger U.S. companies, might be large companies in their local markets. The Causeway International Small Cap Strategy may invest in a wide range of industries. Investments in companies that move above or below the capitalization range of the Index may continue to be held by the Causeway International Small Cap Strategy at the Sub-Adviser's discretion.

Emerging and frontier countries or markets are those countries or markets with low-to-middle-income economies as classified by the World Bank or included in any of the MSCI emerging markets or frontier markets indices. The Sub-Advisers consider a company to be in an emerging or frontier country or market if the company has been registered, incorporated, or organized under the laws of, has headquarters or its principal offices in, or has its stock exchange listing or its securities principally traded in, the emerging or frontier country or market, or if the company derives at least 50% of its revenues, net profits or incremental revenue growth (typically over the past five years) from, or has at least 50% of assets or production capacities in, the emerging or frontier country or market. The Sub-Advisers consider a company to be domiciled in a country if the company is registered, incorporated or organized under the laws of that country, has headquarters or its principal place of business in that country, or has its stock exchange listing or its securities principally traded in that country.

The Fund generally will invest in the securities of companies domiciled in at least three different countries. However, from time to time, the Fund may invest a significant portion of its assets in the securities of companies domiciled in one or a few countries. The Fund may make significant investments in certain sectors or group of sectors from time to time.

The Fund's equity investments include common stock and depositary receipts. The Fund's investments in depositary receipts may include American, European, Canadian and Global Depositary Receipts ("ADRs," "EDRs," "CDRs", and "GDRs," respectively), and other similar securities. ADRs are receipts that represent interests in foreign securities held on deposit by U.S. banks. EDRs and GDRs have the same qualities as ADRs, except that they may be traded in several international trading markets.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

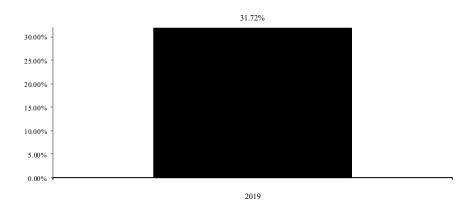

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such
 factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate
 mix of asset classes based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and
 economic conditions in the selection and percentages of allocations.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL Multi-Manager Mid Cap Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term total return.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.64%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Total Annual Fund Operating Expenses	1.09%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Multi-Manager Mid Cap Fund Class A				
1 year 3 years 5 years 10 years				
	\$111	\$347	\$601	\$1,329

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	35%

Principal Investment Strategies. The Fund seeks to achieve its investment objective by the Fund investing, under normal circumstances, at least 80% of its total assets (net assets plus the amount of any borrowings made for investment purposes) in a variety of mid-capitalization growth and value strategies, sometimes referred to as "sleeves," managed by unaffiliated investment managers ("Sub-Advisers"). Each of the Sub-Advisers generally provides day-to-day management for a portion of the Fund's assets.

Each Sub-Adviser may use different investment strategies in managing Fund assets, acts independently from the others, and uses its own methodology for selecting investments. Jackson National Asset Management, LLC ("JNAM" or "Adviser") is responsible for identifying and retaining the Sub-Advisers for the selected strategies and for monitoring the services provided by the Sub-Advisers. JNAM provides qualitative and quantitative supervision as part of its process for selecting and monitoring the Sub-Advisers. JNAM is also responsible for selecting the Fund's investment strategies and for determining the amount of Fund assets to allocate to each Sub-Adviser. Based on JNAM's ongoing evaluation of the Sub-Advisers, JNAM may adjust allocations among Sub-Advisers.

Below are the principal investment strategies for each sleeve, but the Sub-Advisers may also implement other investment strategies in keeping with their respective sleeve's objective.

Champlain Mid Cap Strategy

Champlain Investment Partners, LLC ("Champlain") invests mainly in common stocks of medium-sized companies that it believes have strong long-term fundamentals, superior capital appreciation potential and attractive valuations. Champlain defines a medium-sized company as having a market capitalization of less than \$15 billion or is a constituent of the Russell Mid Cap or S&P 400 Indices at the time of initial purchase.

ClearBridge Mid Cap Strategy

ClearBridge Investments, LLC ("ClearBridge") invests in equity securities, or other investments with similar economic characteristics, of medium capitalization companies. The ClearBridge Mid Cap Strategy may invest up to 20% of its assets in equity securities of companies other than medium capitalization companies. The ClearBridge Mid Cap Strategy may also invest up to 25% of its net assets in securities of foreign issuers.

Nuance Mid Cap Value Strategy

Nuance Investments, LLC ("Nuance") invests in securities of medium-capitalization companies. The Nuance Mid Cap Value Strategy primarily invests in common stocks of companies organized in the United States that Nuance believes are high quality, though temporarily out of favor. The Nuance Mid Cap Value Strategy's investments may also include preferred or convertible preferred stocks. Nuance defines mid-capitalization companies as companies within the range of the capitalization of companies constituting the Russell Mid Cap Index at the time of initial purchase.

Victory Sycamore Mid Cap Strategy

Victory Capital Management Inc., through its investment franchise, Sycamore Capital, ("Victory Capital") invests in equity securities of companies with market capitalizations, at the time of purchase, within the range of companies comprising the Russell MidCap® Value Index. The Victory Sycamore Mid Cap Strategy may invest a portion of its assets in equity securities of foreign companies traded on U.S. exchanges, including American and Global Depositary Receipts (ADRs and GDRs).

Victory Capital invests in companies that it believes to be high quality based on criteria such as market share position, profitability, balance sheet strength, competitive advantages, management competence and the ability to generate excess cash flow. Victory Capital uses a bottom-up investment process in conducting fundamental analysis to identify companies that have sustainable returns trading below Victory Capital's assessment of intrinsic value and prospects for an inflection in business fundamentals that will enable the stock price to be revalued higher.

As of December 31, 2019, the Russell MidCap® Value Index included companies with approximate market capitalizations between \$365.2 million and \$43.7 billion. The size of companies in the index changes with market conditions and the composition of the index.

JNAM also may choose to allocate the Fund's assets to additional strategies in the future. There is no assurance that any or all of the strategies discussed in this prospectus will be used by JNAM or the Sub-Advisers.

JNAM may also manage Fund assets directly to seek to enhance returns, or to hedge and to manage the Fund's cash and short-term instruments.

The Fund has flexibility in the relative weighting of each asset class and expects to vary the percentages of assets invested in each asset class from time to time. JNAM's allocations to the underlying Sub-Advisers will be a function of a variety of factors including each underlying strategy's expected returns, volatility, correlation, and contribution to the Fund's overall risk profile.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more

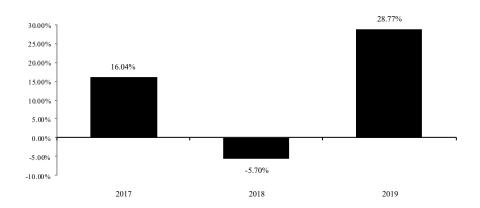

susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL Multi-Manager Small Cap Growth Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.56%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.11%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	0.98%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

	JNL Multi-Manager Small Cap Growth Fund Class A			
	1 year	3 years	5 years	10 years
Γ	\$100	\$312	\$542	\$1,201

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	78%

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a variety of small cap growth strategies, sometimes referred to as "sleeves," managed by unaffiliated investment managers ("Sub-Advisers"). Each of the Sub-Advisers generally provides day-to-day management for a portion of the Fund's assets.

Each Sub-Adviser may use different investment strategies in managing Fund assets, acts independently from the others, and uses its own methodology for selecting investments. Jackson National Asset Management, LLC ("JNAM" or "Adviser") is responsible for identifying and retaining the Sub-Advisers for the selected strategies and for monitoring the services provided by the Sub-Advisers. JNAM provides qualitative and quantitative supervision as part of its process for selecting and monitoring the Sub-Advisers. JNAM is also responsible for selecting the Fund's investment strategies and for determining the amount of Fund assets to allocate to each Sub-Adviser. Based on JNAM's ongoing evaluation of the Sub-Advisers, JNAM may adjust allocations among Sub-Advisers.

Companies with similar characteristics may be grouped together in broad categories called sectors. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund.

Below are the principal investment strategies for each sleeve, but the Sub-Advisers may also implement other investment strategies in keeping with their respective sleeve's objective.

GIM Small Cap Advantage Strategy

Granahan Investment Management, Inc. ("GIM") constructs the strategy by blending two of their unique strategies, Small Cap Focused Growth strategy and Small Cap Discoveries strategy.

Both GIM strategies utilize rigorous bottom-up fundamental research. GIM's Small Cap Focused Growth strategy is grounded in the belief that superior long term returns are best achieved by focusing on smaller companies that are poised to grow at 15% or more, and using a strict methodology to own the stocks of these sustainable growth companies when risk/reward is attractive.

Within this philosophy GIM's Small Cap Focused Growth strategy seeks to own companies with large open-ended opportunities, a favorable competitive landscape and products or services providing a significant value proposition to the customer.

The Small Cap Discoveries strategy believes that the small/micro-capitalization market has a skewed distribution of returns where a small but meaningful number of high-performing stocks drive the return of the benchmark.

Victory RS Investments Custom Growth Strategy

Victory Capital Management Inc., through its investment franchise, RS Investments, ("Victory Capital"), sub-advises a portion of the Fund. Victory Capital constructs the Victory RS Investments Custom Growth Strategy by investing principally in small- and mid-capitalization companies.

Victory Capital considers a company to be a small-capitalization company if its market capitalization (at the time of purchase) is either less than \$3 billion or 120% of the market capitalization of the largest company included in the Russell 2000® Index on the last day of the most recent quarter (currently, approximately \$8.3 billion, based on the size of the largest company in the Index on December 31, 2019), whichever is greater.

Victory Capital considers a company to be a mid-capitalization company if its market capitalization (at the time of purchase) is at least that of a small-capitalization company (as defined above) and less than \$8 billion or 120% of the market capitalization of the largest company included in the Russell 2500® Index on the last day of the most recent quarter (currently, approximately \$19.9 billion, based on the size of the largest company in the Index on December 31, 2019), whichever is greater. The Victory RS Investments Custom Growth Strategy typically invests most of if its assets in equity securities of U.S. companies but may also invest any portion of its assets in foreign securities, including American and Global Depositary Receipts (ADRs and GDRs).

The size of companies in an index changes with market conditions and the composition of the index.

Victory Capital employs both fundamental analysis and quantitative screening in seeking to identify companies that the investment team believes will produce sustainable earnings growth over a multi-year horizon. Investment candidates typically exhibit some or all of the following key criteria: strong organic revenue growth, expanding margins and profitability, innovative products or services, defensible competitive advantages, growing market share, and experienced management teams. Valuation is an integral part of the investment process and purchase decisions are based on the Adviser's expectation of the potential reward relative to risk of each security based in part on its proprietary earnings calculations.

Kayne Anderson Rudnick Small Cap Growth Strategy

Kayne Anderson Rudnick Investment Management, LLC ("KAR") constructs the strategy by investing in common stocks of small market capitalization companies believed to be undervalued relative to their future growth potential. The investment strategy emphasizes companies determined by KAR to have a sustainable competitive advantage and the ability to grow over an extended period of time. Although the strategy invests primarily in U.S. companies, it may invest in foreign securities and American Depositary Receipts.

KAR considers small market capitalization companies to be those companies that, at the time of initial purchase, have market capitalizations generally within the range of companies included in the Russell 2000 Growth Index on a rolling three-year basis.

WCM Small Cap Growth Strategy

WCM Investment Management, LLC ("WCM") sub-advises a portion of the Fund. WCM constructs the WCM Small Cap Growth Strategy by investing principally in small-capitalization companies.

WCM considers small capitalization companies to be companies with market capitalizations within the range of those companies included in the Russell 2000 Growth Index at the time of purchase. Because small capitalization companies are defined by reference to an index, the range of market capitalization of companies which the Fund invests may vary with market conditions. As of December 31, 2019, the Russell 2000 Growth Index included companies with approximate market capitalizations between \$12.7 million and \$8.27 billion. The size of companies in the index changes with market conditions and the composition of the index.

The WCM Small Cap Growth Strategy primarily invests in equity securities of U.S. companies but may also invest any portion of its assets in REITs, foreign securities, including American and Global Depositary Receipts (ADRs and GDRs).

WCM employs both fundamental analysis and quantitative screening in seeking to identify companies that the investment team believes will produce significant, long-term excess return.

WCM's investment process examines four key governing components:

- Corporate Performance reviewing operating history of the company, understanding of management's skill set, the company's core competency, the culture and their ability to evolve.
- Systematic Effects evaluating the macro factors affecting the business, their position in the market and looking to gain an understanding of the key drivers of the business.
- Sustainability measuring how the company can protect its margins and continue to reinvest cash flows.
- Intrinsic Value determining the value of the company versus how the market values the company.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry,

such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

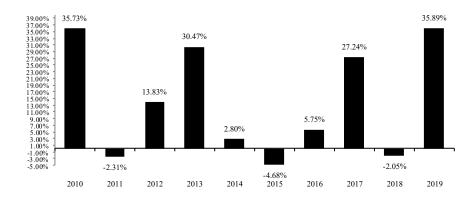

- *Mid-capitalization and small-capitalization investing risk* The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations.
- Information technology sector risk Information technology companies face intense competition and potentially rapid product obsolescence. They are also heavily dependent on intellectual property rights and may be adversely affected by the loss or impairment of those rights.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *Portfolio turnover risk* Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to September 28, 2015, reflects the Fund's results when managed by the former sub-adviser, Eagle Asset Management, Inc. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL Multi-Manager Small Cap Value Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term total return.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.67%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.11%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	1.09%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL Multi-Manager Small Cap Value Fund Class A			
1 year	3 years	5 years	10 years
\$111	\$347	\$601	\$1,329

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	84%

Principal Investment Strategies. The Fund seeks to achieve its investment objective by the Fund investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a variety of small cap value strategies, sometimes referred to as "sleeves," managed by five unaffiliated investment managers ("Sub-Advisers"). Each of the Sub-Advisers generally provides day-to-day management for a portion of the Fund's assets.

Each Sub-Adviser may use different investment strategies in managing Fund assets, acts independently from the others, and uses its own methodology for selecting investments. Jackson National Asset Management, LLC ("JNAM" or "Adviser") is responsible for identifying and retaining the Sub-Advisers for the selected strategies and for monitoring the services provided by the Sub-Advisers. JNAM provides qualitative and quantitative supervision as part of its process for selecting and monitoring the Sub-Advisers. JNAM is also responsible for selecting the Fund's investment strategies and for determining the amount of Fund assets to allocate to each Sub-Adviser. Based on JNAM's ongoing evaluation of the Sub-Advisers, JNAM may adjust allocations among Sub-Advisers.

Below are the principal investment strategies for each sleeve, but the Sub-Advisers may also implement other investment strategies in keeping with their respective sleeve's objective.

Congress Small Cap Value Strategy

Congress Asset Management Company, LLP ("Congress") constructs the Small Cap Value Strategy by investing in the common stocks of small capitalization ("small-cap") companies.

The Small Cap Value Strategy market capitalization range is generally within the range of the Russell 2000 Value Index (between approximately \$25.0 million and \$6.2 billion as of December 31, 2019) at the time of purchase. The market capitalization range is expected to change over time.

Congress generally constructs the strategy to consist of 70-110 companies. The Small Cap Value Strategy is predominantly focused on investing in companies domiciled within the United States. The strategy can invest in foreign securities, primarily through American Depositary Receipts ("ADRs") and the equity securities of companies incorporated outside of the U.S. that are traded on U.S. exchanges. Investments in ADRs are generally less than 10%.

The strategy focuses on opportunities that Congress believes have significant upside potential, emphasizing a combination of both valuation and earnings power. Congress employs a fundamental, bottom-up investment approach that includes both financial modeling and qualitative analysis. A stock may be sold, among other reasons, if Congress believes that the company's cumulative valuation and earnings upside potential approaches fair value, better opportunities exist, the company experiences fundamental deterioration, or the market capitalization rises above a targeted range.

Cooke & Bieler Small Cap Value Equity Strategy

Cooke & Bieler, L.P. ("C&B") constructs the Small Cap Value Equity Strategy by investing in the common stocks of small capitalization ("small-cap") companies.

C&B invests principally in small-capitalization companies, which are defined as having market capitalizations within the market capitalization range of the constituents of Russell 2000® Index at the time of purchase. As of December 31, 2019, the Index had a market capitalization range of \$13 million to \$8.34 billion.

C&B manages a relatively focused portfolio of typically 40 to 60 companies that enables C&B to provide adequate diversification while allowing the portfolio to behave differently than the market.

C&B selects securities for the strategy based on an analysis of a company's financial characteristics and an assessment of the quality of a company's management.

WCM Small Cap Value Strategy

WCM Investment Management, LLC ("WCM") constructs the Small Cap Value Strategy by investing in the common stocks of small capitalization ("small-cap") companies that WCM believes are undervalued. WCM considers small capitalization companies to be companies within the market capitalization range of the constituents of the Russell 2000 Index (between approximately \$12.7 million and \$8.27 billion as of December 31, 2019). Investments in companies that move outside the capitalization range may continue to be held by the Small Cap Value Strategy at WCM's discretion.

WCM generally constructs the strategy to consist of 25-40 companies. WCM typically selects shareholder-friendly companies with a durable competitive advantage that are trading at a discount to intrinsic value. Characteristics of these companies include sustained, high returns on invested capital, consistent free cash flow generation, and impressive compounding of net book value over time.

JNAM also may choose to allocate the Fund's assets to additional strategies in the future. There is no assurance that any or all of the strategies discussed in this prospectus will be used by JNAM or the Sub-Advisers.

JNAM may also manage Fund assets directly to seek to enhance returns, or to hedge and to manage the Fund's cash and short-term instruments.

The Fund has flexibility in the relative weighting of each asset class and expects to vary the percentages of assets invested in each asset class from time to time. JNAM's allocations to the underlying Sub-Advisers will be a function of a variety of factors including each underlying strategy's expected returns, volatility, correlation, and contribution to the Fund's overall risk profile.

Reinhart Genesis PMV Strategy

Reinhart Partners, Inc. ("Reinhart") constructs the Reinhart Genesis PMV Strategy by investing equity securities issued by small-capitalization ("small-cap") companies. Reinhart considers a company to be a small-cap company if it has a market capitalization, at the time of purchase, within the capitalization range of the Russell 2500TM Index as of the date it was last reconstituted. The market capitalizations within the Index vary, but as of December 31, 2019, they ranged from approximately \$159 million to \$12.2 billion.

Reinhart's investment strategy utilizes Reinhart's proprietary Private Market Value ("PMV") methodology to determine a company's true intrinsic value, which is the amount an acquirer would be willing to pay for the entire company. This PMV becomes the "anchor" by which all decisions by Reinhart are framed within an emotional market. PMV is calculated by observing actual takeover valuations and applying the corresponding, appropriate valuation multiples to each security analyzed. Reinhart selects investments for the strategy's portfolio that generally can be purchased at a discount of 30% or more to the PMV. Reinhart typically sells investments when they reach or are close to reaching the PMV, or due to a change in the fundamentals of the security. In addition, Reinhart emphasizes quality and attempts to find sustainable competitive advantages, one stock at a time, with an overall focus on positive risk/reward to protect capital in challenging markets while capturing most of the upside return when stocks advance.

Reinhart may invest up to 20% of its net assets in securities of foreign issuers, real estate investment trusts ("REITs") and securities of other investment companies, including exchange-traded funds ("ETFs"). Reinhart's investment in other investment companies and ETFs will be within the limits of the Investment Company Act of 1940, as amended. Reinhart's investments in foreign securities may include American depositary receipts ("ADRs").

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt

or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.

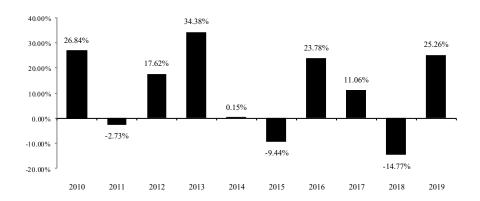

- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such
 factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate
 mix of asset classes based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and
 economic conditions in the selection and percentages of allocations.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Real estate investment risk Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to September 28, 2015, reflects the Fund's results when managed by the former sub-adviser, Franklin Advisory Services, LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL iShares Tactical Moderate Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital through investment in exchange-traded funds ("Underlying ETFs").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.20%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Acquired Fund Fees and Expenses ²	0.16%	
Total Annual Fund Operating Expenses	0.81%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL iShares Tactical Moderate Fund Class A			
1 year 3 years 5 years 10 years			
\$83 \$259		\$450	\$1,002

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	55%

Principal Investment Strategies. Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified group of underlying exchange-traded funds ("ETFs"). An ETF is an investment fund that is traded on a stock exchange and holds an underlying basket of securities generally designed to track an index. ETFs can be bought and sold through the trading day in the secondary market or at net asset value directly with an authorized participant. The Fund will only invest in ETFs that have received an order for exemptive relief from the limits set forth in Section 12 of the Investment Company Act of 1940, as amended (the "1940 Act"). A list of such ETFs will be provided by the Adviser upon request.

Final allocations are determined by the Adviser through the use of both internal and external resources. Mellon Investments Corporation ("Mellon") the Fund's sub-adviser (the "Sub-Adviser"), is responsible for managing the investment of portfolio assets solely according to the instructions (including the specific Underlying ETFs and the corresponding weights of such Underlying ETFs) provided by the Adviser. The Sub-Adviser executes transactions in the Underlying ETFs, as required, to closely replicate the allocation instructions received from the Adviser. The Fund's allocations are rebalanced periodically to maintain the Fund's tactical allocation ranges.

Under normal market conditions, the Adviser allocates approximately 20% to 60% (with a target allocation of 40%) of the Fund's assets to Underlying ETFs that invest primarily in equity securities, 40% to 80% (with a target allocation of 60%) of the Fund's assets to Underlying ETFs that invest primarily in fixed income securities and/or cash alternatives, and up to 15% (with a target allocation of 0%) of the Fund's assets to Underlying ETFs that invest primarily in alternative assets and strategies. The Adviser may also allocate the Fund's assets to securities and derivative contracts to meet the Fund's allocation targets.

The Fund may also invest in a range of securities and derivative contracts, including indexes, swap agreements, futures, currency forwards, and U.S. Treasury securities, and cash equivalents including, without limitation, commercial paper, repurchase agreements, and time deposits, as instructed by the Adviser.

The Fund may invest, directly or through ETFs, in securities that have exposure to foreign currencies through their underlying investments, such as in companies that trade in or receive revenues in foreign currencies.

The Fund may invest, directly or through ETFs, in illiquid or thinly traded securities.

The Fund may invest, directly or through ETFs, in bank loans.

The Fund may lend its securities to increase its income.

The Sub-Adviser may invest in ETFs in excess of the 1940 Act limits on investment in other investment companies as instructed by the Adviser.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

• Equity securities risk – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying ETFs based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying ETFs.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying Fund to counterparty risk.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if an Underlying Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, an Underlying Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or
 in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction
 costs, which may reduce performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

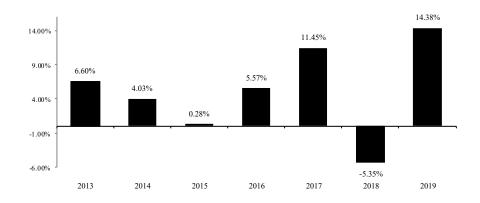

The performance data includes the performance of the JNL iShares Tactical Moderate Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Conservative Index with the Morningstar Moderately Conservative Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 40% MSCI All Country World Index (Net), 60% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the

broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL iShares Tactical Moderate Growth Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital through investment in exchange-traded funds ("Underlying ETFs").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.20%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Acquired Fund Fees and Expenses ²	0.19%	
Total Annual Fund Operating Expenses	0.84%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL iShares Tactical Moderate Growth Fund Class A			
1 year	3 years	5 years	10 years
\$86	\$268	\$466	\$1,037

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	44%

Principal Investment Strategies. Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified group of underlying exchange-traded funds ("ETFs"). An ETF is an investment fund that is traded on a stock exchange and holds an underlying basket of securities generally designed to track an index. ETFs can be bought and sold through the trading day in the secondary market or at net asset value directly with an authorized participant. The Fund will only invest in ETFs that have received an order for exemptive relief from the limits set forth in Section 12 of the Investment Company Act of 1940, as amended (the "1940 Act"). A list of such ETFs will be provided by the Adviser upon request.

Final allocations are determined by the Adviser through the use of both internal and external resources. Mellon Investments Corporation ("Mellon"), the Fund's sub-adviser (the "Sub-Adviser"), is responsible for managing the investment of portfolio assets solely according to the instructions (including the specific Underlying ETFs and the corresponding weights of such Underlying ETFs) provided by the Adviser. The Sub-Adviser executes transactions in the Underlying ETFs, as required, to closely replicate the allocation instructions received from the Adviser. The Fund's allocations are rebalanced periodically to maintain the Fund's tactical allocation ranges.

Under normal market conditions, the Adviser allocates approximately 40% to 80% (with a target allocation of 60%) of the Fund's assets to Underlying ETFs that invest primarily in equity securities, 20% to 60% (with a target allocation of 40%) of the Fund's assets to Underlying ETFs that invest primarily in fixed income securities and/or cash alternatives, and up to 15% (with a target allocation of 0%) of the Fund's assets to Underlying ETFs that invest primarily in alternative assets and strategies. The Adviser may also allocate the Fund's assets to securities and derivative contracts to meet the Fund's allocation targets.

The Fund may also invest in a range of securities and derivative contracts, including indexes, swap agreements, futures, currency forwards, and U.S. Treasury securities, and cash equivalents including, without limitation, commercial paper, repurchase agreements, and time deposits, as instructed by the Adviser.

The Fund may invest, directly or through ETFs, in securities that have exposure to foreign currencies through their underlying investments, such as in companies that trade in or receive revenues in foreign currencies.

The Fund may invest, directly or through ETFs, in illiquid or thinly traded securities.

The Fund may invest, directly or through ETFs, in bank loans.

The Fund may lend its securities to increase its income.

The Sub-Adviser may invest in ETFs in excess of the 1940 Act limits on investment in other investment companies as instructed by the Adviser.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

• Equity securities risk – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying ETFs based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying ETFs.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying Fund to counterparty risk.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if an Underlying Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, an Underlying Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

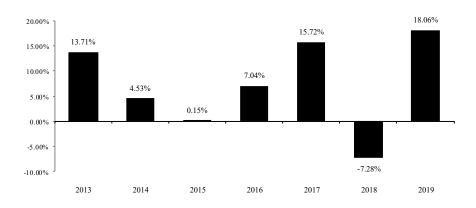

The performance data includes the performance of the JNL iShares Tactical Moderate Growth Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderate Index with the Morningstar Moderate Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 60% MSCI All Country World Index (Net), 40% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL iShares Tactical Growth Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital through investment in exchange-traded funds ("Underlying ETFs").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.20%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Acquired Fund Fees and Expenses ²	0.21%	
Total Annual Fund Operating Expenses	0.86%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL iShares Tactical Growth Fund Class A				
	1 year	3 years	5 years	10 years
	\$88	\$274	\$477	\$1,061

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	44%

Principal Investment Strategies. Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in underlying exchange-traded funds ("ETFs"). An ETF is an investment fund that is traded on a stock exchange and holds an underlying basket of securities generally designed to track an index. ETFs can be bought and sold through the trading day in the secondary market or at net asset value directly with an authorized participant. The Fund will only invest in ETFs that have received an order for exemptive relief from the limits set forth in Section 12 of the Investment Company Act of 1940, as amended (the "1940 Act"). A list of such ETFs will be provided by the Adviser upon request.

Final allocations are determined by the Adviser through the use of both internal and external resources. Mellon Investments Corporation ("Mellon"), the Fund's sub-adviser (the "Sub-Adviser"), is responsible for managing the investment of portfolio assets solely according to the instructions (including the specific Underlying ETFs and the corresponding weights of such Underlying ETFs) provided by the Adviser. The Sub-Adviser executes transactions in the Underlying ETFs, as required, to closely replicate the allocation instructions received from the Adviser. The Fund's allocations are rebalanced periodically to maintain the Fund's tactical allocation ranges.

Under normal market conditions, the Adviser allocates approximately 60% to 100% (with a target allocation of 80%) of the Fund's assets to Underlying ETFs that invest primarily in equity securities, 0% to 40% (with a target allocation of 20%) of the Fund's assets to Underlying ETFs that invest primarily in fixed income securities and/or cash alternatives, and up to 15% (with a target allocation of 0%) of the Fund's assets to Underlying ETFs that invest primarily in alternative assets and strategies. The Adviser may also allocate the Fund's assets to securities and derivative contracts to meet the Fund's allocation targets.

The Fund may also invest in a range of securities and derivative contracts, including indexes, swap agreements, futures, currency forwards, and U.S. Treasury securities, and cash equivalents including, without limitation, commercial paper, repurchase agreements, and time deposits, as instructed by the Adviser.

The Fund may invest, directly or through ETFs, in securities that have exposure to foreign currencies through their underlying investments, such as in companies that trade in or receive revenues in foreign currencies.

The Fund may invest, directly or through ETFs, in illiquid or thinly traded securities.

The Fund may invest, directly or through ETFs, in bank loans.

The Fund may lend its securities to increase its income.

The Sub-Adviser may invest in ETFs in excess of the 1940 Act limits on investment in other investment companies as instructed by the Adviser.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

• Equity securities risk – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying ETFs based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying ETFs.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying Fund to counterparty risk.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if an Underlying Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, an Underlying Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

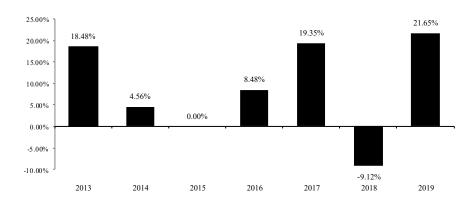

The performance data includes the performance of the JNL iShares Tactical Growth Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Aggressive Index with the Morningstar Moderately Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 80% MSCI All Country World Index (Net), 20% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the

roker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson is it your financial intermediary's Website for more information.	or

Summary Prospectus – April 27, 2020

JNL/American Funds Moderate Growth Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objectives. The investment objective of the Fund is to seek a balance between current income and growth of capital.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.19%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Acquired Fund Fees and Expenses ²	0.40%	
Total Annual Fund Operating Expenses	1.04%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/American Funds Moderate Growth Allocation Fund Class A				
1 year		3 years	5 years	10 years
\$106		\$331	\$574	\$1,271

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	22%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of either the American Funds Insurance Series® ("AFIS") or the American Funds R6 mutual fund share class. Not all Funds of the American Funds are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 40%-80% of its assets to Underlying Funds that invest primarily in equity securities and 20%-60% of its assets to Underlying Funds that invest primarily fixed-income securities. The equity and fixed-income allocation may fall outside of the above limits in a volatile market environment where investment outcomes are expected to remain beyond normal range.

Within these asset classes, the Fund remains flexible with respect to the percentage it will allocate among Underlying Funds. In determining allocations to any particular Underlying Fund, the Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

Some of the Underlying Funds may utilize a number of derivatives in order to execute their investment strategy. Some of the Underlying Funds, particularly those classified as Equities Strategies, may hold a significant amount of small or mid-capitalization equities in order to execute their investment strategy. Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of junk bonds in order to execute their investment strategy.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such
 factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate
 mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in
 market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have

narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.

- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such

arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

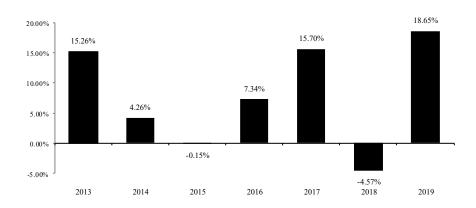

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderate Index with the Morningstar Moderate Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 60% MSCI All Country World Index (Net), 40% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/American Funds Growth Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objectives. The investment objective of the Fund is to seek capital growth with secondary emphasis on current income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.18%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Acquired Fund Fees and Expenses ²	0.41%	
Total Annual Fund Operating Expenses	1.05%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/American Funds Growth Allocation Fund Class A				
	1 year	3 years	5 years	10 years
ſ	\$107	\$334	\$579	\$1,283

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	19%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of either the American Funds Insurance Series® ("AFIS") or the American Funds R6 mutual fund share class. Not all the American Funds are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 60%-100% of its assets to Underlying Funds that invest primarily in equity securities, 0%-40% of its assets to Underlying Funds that invest primarily fixed-income securities, and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities. The equity and fixed-income allocation may fall outside of the above limits in a volatile market environment where investment outcomes are expected to remain beyond normal range.

Within these asset classes, the Fund remains flexible with respect to the percentage it will allocate among Underlying Funds. In determining allocations to any particular Underlying Fund, the Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

Fund investments may include Underlying Funds that invest in foreign bonds denominated in currencies other than U.S. dollars as well as Underlying Funds that invest exclusively in bonds of U.S. issuers.

Some of the Underlying Funds may utilize a number of derivatives in order to execute their investment strategy. Some of the Underlying Funds, particularly those classified as Equities Strategies, may hold a significant amount of small or mid-capitalization equities in order to execute their investment strategy. Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of junk bonds in order to execute their investment strategy.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt

or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.

- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund.

Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

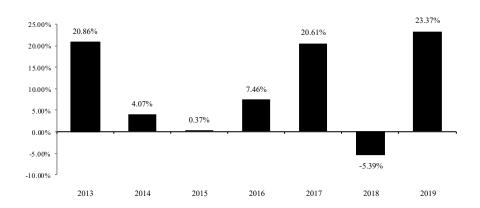

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Aggressive Index with the Morningstar Moderately Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 80% MSCI All Country World Index (Net), 20% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Mark Pliska, CFA	April 2014	Portfolio Manager, JNAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

JNL/AQR Large Cap Defensive Style Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek total return. Total return consists of capital appreciation and income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.40%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	0.87%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/AQR Large Cap Defensive Style Fund Class A			
1 year	5 years	10 years	
\$89	\$278	\$482	\$1,073

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
6/24/2019 - 12/31/2019	82%

Principal Investment Strategies. The Fund pursues a "defensive" investment style, seeking to provide downside protection with upside potential through active stock selection, risk management, and diversification. The Fund pursues its objective by investing, under normal market conditions, at least 80% of its net assets (including any borrowings for investment purposes) in "Equity Instruments" of large-capitalization issuers. Equity Instruments include common stock, preferred stock, warrants, exchange-traded funds that invest in equity securities, stock index futures, real estate investment trusts, and other derivative instruments where the reference asset is an equity security. As of the date of this prospectus, AQR Capital Management, LLC, the Fund's sub-adviser ("Sub-Adviser"), generally considers large-cap issuers to be those issuers with market capitalizations within the range of the MSCI USA Index at the time of purchase. As of December 31, 2019, the market capitalization of the companies comprising the MSCI USA Index ranged from \$4.2 billion to \$1.295 trillion. The Fund can invest in companies of any size and may invest in small- and mid-cap companies from time to time in the discretion of the Sub-Adviser.

The Fund pursues a defensive investment style, meaning it seeks to participate in rising equity markets while mitigating downside risk in declining markets. In other words, the Fund expects to lag the performance of traditional U.S. equity funds when equity markets are rising but to exceed the performance of traditional U.S. equity funds during equity market declines. To achieve this result, the Fund will be broadly diversified across companies and industries and will invest in companies that the Sub-Adviser has identified to have low measures of risk and high quality (*e.g.*, stable companies in good business health).

The Fund is actively managed, and the Sub-Adviser will vary the Fund's exposures to issuers and industries based on the Sub-Adviser's evaluation of investment opportunities. In constructing the portfolio, the Sub-Adviser uses quantitative models, which combine active management to identify quality companies and statistical measures of risk to assure diversification by issuer and industry, as well as additional criteria that form part of the Sub-Adviser's security selection process. The Sub-Adviser will use volatility and correlation forecasting and portfolio construction methodologies to manage the Fund. The Sub-Adviser utilizes quantitative risk models in furtherance of the Fund's investment objective, which seek to control portfolio level risk. Shifts in allocations among issuers and industries will be determined using the quantitative models based on the Sub-Adviser's determinations of risk and quality, as well as other factors including, but not limited to, managing industry and sector exposures.

The Fund invests significantly in common stocks. The Fund may also invest in or use financial futures contracts as well as exchange-traded funds and similar pooled investment vehicles for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. The Fund may invest in short-term instruments, including U.S. Government securities, bank certificates of deposit, money market instruments or funds, and such other liquid investments deemed appropriate by the Sub-Adviser. The Fund may invest in these securities without limit for temporary defensive purposes.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign

- stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Managed portfolio risk* As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the sub-adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Model risk* The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Hedging transactions risk The Sub-Adviser from time to time employs various hedging techniques. The success of the Fund's hedging strategy will be subject to the Sub-Adviser's ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Since the characteristics of many securities change as markets change or time passes, the success of the Fund's hedging strategy will also be subject to the Sub-Adviser's ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. For a variety of reasons, the Sub-Adviser may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs (such as trading commissions and fees).

- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. Performance for the Fund has not been included because the Fund has less than one full calendar year of operations.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

AQR Capital Management, LLC ("AQR")

Portfolio Managers:

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the

Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

JNL/AQR Large Cap Relaxed Constraint Equity Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.69%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ^{1,2,3}	0.75%	
Total Annual Fund Operating Expenses	1.74%	
Less Waiver/Reimbursement ⁴	0.00%	
Total Annual Fund Operating Expenses After Waiver/Reimbursement	1.74%	

- ¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ² "Other Expenses" are based on amounts incurred during the period ended December 31, 2019. The amount includes the costs associated with the Fund's short sales on equity securities. When a cash dividend is declared on a security for which the Fund holds a short position, the Fund incurs the obligation to pay an amount equal to that dividend to the lender of the shorted security. In addition, the Fund incurs borrowing fees related to short sale transactions. The annualized ratios of dividend expense on short sales and borrowing fees related to short sales to assets for the period were 0.37%. The Fund's actual dividend expense and borrowing fees on securities sold short in future periods may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's short positions, the actual dividends paid with respect to the securities the Fund sells short, and the actual timing of the Fund's short sale transactions, each of which is expected to vary over time. The annualized ratios of dividend expense on short sales and borrowing fees related to short sales have been restated to reflect current fees.
- ³ "Other Expenses" are based on amounts incurred during the period ended December 31, 2019. The amount includes financing costs associated with secured borrowings. The annualized ratios of financing costs related to secured borrowings were 0.21%. The Fund's actual financing costs may be

- significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's involvement with secured borrowings and the costs associated with those transactions, each of which is expected to vary over time.
- ⁴ JNAM has contractually agreed to waive 0.00% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

JNAM has contractually agreed to waive 0.025% of the management fees of the Fund when the assets are between \$500 million and \$1 billion, and waive 0.05% of the management fees of the Fund when the assets are over \$1 billion. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/AQR Large Cap Relaxed Constraint Equity Fund Class A				
1 year 3 years 5 years 10 years				
\$177	\$548	\$944	\$2,052	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	85%

Principal Investment Strategies. The Fund's principal investment strategy is to invest in a broad mix of equity securities that aims to produce long-term capital appreciation in excess of MSCI USA Index.

Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus borrowings made for investment purposes) in equity securities or equity related instruments (together, "equity securities") of large-capitalization companies, which AQR Capital Management, LLC ("Sub-Adviser") generally considers to be those companies with market capitalizations within the range of the MSCI USA Index at the time of purchase. As of December 31, 2019, the market capitalization range for the MSCI USA Index was \$4.2 billion to \$1.295 trillion.

The Sub-Adviser will normally establish long and short positions in equity securities, including, but not limited to, common stocks, exchange-traded funds and similar pooled investment vehicles, equity index futures and real estate investment trusts. The Fund will be managed by both overweighting and underweighting securities, industries, and sectors relative to the MSCI USA Index. "Relaxed Constraint" in the Fund's name reflects the Fund's strategy to take long as well as short positions in the equity securities in which it invests, as opposed to a traditional "long-only" fund which does not establish short positions (*i.e.*, relaxing the "long-only" constraint). Selling securities short allows the Fund to reflect to a greater extent, compared to a long-only approach, the Sub-Adviser's views on securities it expects to underperform. Selling securities short also allows the Fund to establish additional long positions using the short sale proceeds, and thereby take greater advantage, compared to a long-only approach, of the Sub-Adviser's views on securities it expects to outperform. Through the reinvestment of the short sale proceeds, the Fund generally intends to target a long exposure of 130% of the Fund's net assets with a short exposure of 30% of the Fund's net assets. Actual long and short exposures, however, will vary according to market conditions. The Fund's long exposures are expected to range between 120% and 140% of the Fund's net assets.

The Fund, when taking a "long" equity position, will purchase a security that will benefit from an increase in the price of that security. When taking a "short" equity position, the Fund borrows the security from a third party and sells it at the then current market price. A "short" equity position will benefit from a decrease in price of the security and will lose value if the price of the security increases.

In constructing the Fund's portfolio, the Sub-Adviser utilizes a quantitative investment process. A quantitative investment process is a systematic method of evaluating securities and other assets by analyzing a variety of data through the use of models—or processes—to generate an investment opinion. The models consider a wide range of factors, including, but not limited to, value and momentum.

Value strategies favor securities that appear cheap based on fundamental measures. Examples of value measures include using price-to-earnings and price-to-book ratios.

Momentum strategies favor securities with strong recent performance and positive changes in fundamentals.

In addition to these two main factors, the Sub-Adviser may use a number of additional factors based on the Sub-Adviser's proprietary research, including but not limited to, quality, investor sentiment and management signaling. The Sub-Adviser may add to or modify the factors employed in selecting investments.

The Sub-Adviser determines the long or short weight of each equity security in the portfolio using portfolio optimization techniques, taking into account the Sub-Adviser's assessment of attractiveness of the equity security based on various factors, including those described above, stock weights in the benchmark index, estimated transaction costs associated with trading each equity security, and additional criteria that form part of the Sub-Adviser's security selection process.

The Fund invests significantly in equity securities. The Fund may also invest in or use financial futures contracts as well as exchange-traded funds and similar pooled investment vehicles, for hedging purposes, to gain exposure to the equity market and to maintain liquidity to pay for redemptions. A portion of the Fund's assets may be held in cash or cash-equivalent investments, including, but not limited to, short-term investment funds.

As with equity positions, the Fund may also take "long" and "short" positions in derivative instruments, such as equity index futures contracts. A "long" position in a derivative instrument will benefit from an increase in the price of the underlying instrument. A "short" position in a derivative instrument will benefit from a decrease in price of the underlying instrument and will lose value if the price of the underlying instrument increases.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Model risk* The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- Short sales risk A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received

from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.

- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.
- Investment momentum style risk Investing in or having exposure to securities with positive momentum involves investing in securities that have had above-average recent returns. These securities may be more volatile than a broad cross-section of securities. In addition, there may be periods when the momentum style falls out of favor, which may hurt the investment performance of a Fund using such strategy.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.

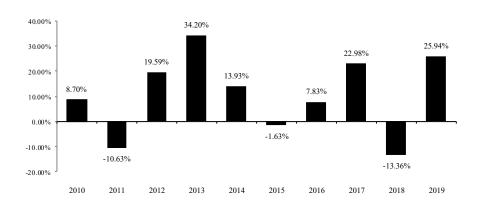

- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to April 24, 2017 reflects the Fund's results when managed by the former sub-adviser, Goldman Sachs Assets Management, L.P. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

JNL/AQR Managed Futures Strategy Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek positive absolute returns.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.80%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Acquired Fund Fees and Expenses ²	0.05%	
Total Annual Fund Operating Expenses ³	1.31%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/AQR Managed Futures Strategy Fund Class A			
1 year	3 years	5 years	10 years
\$133	\$415	\$718	\$1,579

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	0%

In accordance with industry practice, certain derivative instruments and instruments with a maturity of one year or less at the time of acquisition are excluded from the calculation of portfolio turnover rate which leads to the 0% portfolio turnover rate reported above. If these instruments were included in the calculation, the Fund would have a high portfolio turnover rate (typically greater than 300% per year (as discussed below under "Principal Investment Strategies").

Principal Investment Strategies. To pursue its investment objective, the Fund invests primarily in a portfolio of futures contracts, futures-related instruments, forwards and swaps, as defined below. The Fund's universe of investments currently includes more than 100 global developed and emerging market exchange-traded futures, futures-related instruments, forward contracts and swaps across four major asset classes (commodities, currencies, fixed-income and equities). The Fund's universe of investments is subject to change under varying market conditions and as these instruments evolve over time.

Generally, the Fund invests in futures contracts, futures-related instruments, forwards and swaps, and may include, but will not be limited to, global equity index futures, swaps on equity index futures and equity swaps, global currencies, currency forwards and currency futures, commodity futures, forwards and swaps, global interest rate and bond futures and swaps (collectively, "Instruments"). These Instruments may be used for investment or speculative purposes, hedging or as a substitute for investing in conventional securities. The Fund may also invest in fixed-income securities, money market instruments, and cash. There are no geographic limits on the market exposure of the Fund's assets. This flexibility allows AQR Capital Management, LLC ("Sub-Adviser") to look for investments or gain exposure to asset classes and markets around the world, including emerging markets, that it believes will enhance the Fund's ability to meet its objective.

The Sub-Adviser uses a proprietary, systematic and quantitative process which seeks to benefit from price trends in equity, fixed-income, currency and commodity Instruments. As a part of this process, the Fund will take either a long or short position in a given Instrument. The size and type (long or short) of the position taken will relate to various factors, including the Sub-Adviser's systematic assessment of a trend and its likelihood of continuing as well as the Sub-Adviser's estimate of the Instrument's risk. The owner of a "long" position in a derivative instrument will benefit from an increase in the price of the underlying security or instrument. The owner of the "short" position in a derivative instrument will benefit from a decrease in price of the underlying security or instrument. The Sub-Adviser generally expects that the Fund will have exposure in long and short positions across all four major asset classes (commodities, currencies, fixed-income and equities), but at any one time the Fund may emphasize one or two of the asset classes or a limited number of exposures within an asset class.

Futures and forward contracts are contractual agreements to buy or sell a particular currency, commodity or financial instrument at a pre-determined price in the future. The Fund's use of futures contracts, forward contracts, swaps and certain other Instruments will have the economic effect of financial leverage. Financial leverage magnifies exposure to the swings in prices of an asset class underlying an Instrument and results in increased volatility, which means the Fund will have the potential for greater gains, as well as the potential for greater losses, than if the Fund does not use Instruments that have a leveraging effect. Leveraging tends to magnify, sometimes significantly, the effect of any increase or decrease in the Fund's exposure to an asset class and may cause the Fund's net asset value ("NAV") to experience greater volatility. A decline in the Fund's assets due to losses magnified by the Instruments providing leveraged exposure may require the Fund to liquidate portfolio positions to satisfy its obligations, to meet redemption requests, to meet margin or collateral requirements, or to meet asset segregation requirements when it may not be advantageous to do so.

The Sub-Adviser, on average, will target an annualized volatility level for the Fund of 10%. Volatility is a statistical measurement of the dispersion of returns of a security or fund or index, as measured by the annualized standard deviation of its returns. The Sub-Adviser expects that the Fund's targeted annualized forecasted volatility will typically range between 5% and 13%; however, the actual or realized volatility level for longer or shorter periods may be materially higher or lower depending on market conditions. Higher volatility generally indicates higher risk. Actual or realized volatility can and will differ from the forecasted or target volatility described above.

As a result of the Fund's strategy, the Fund may have highly leveraged exposure to one or more asset classes at times. The Investment Company Act of 1940, as amended ("1940 Act") and the rules and interpretations thereunder impose certain limitations on the Fund's

ability to use leverage and also require the Fund to "set aside" (often referred to as "asset segregation") liquid assets, or engage in other SEC or SEC staff approved measures, to "cover" open positions with respect to certain Instruments that have the economic effect of financial leverage (as described above). The Fund, however, is not subject to any additional limitations on its net long and short exposures. For more information on the asset segregation requirements and these and other risk factors, please see the "Principal Risks of Investing in the Fund."

When taking into account derivative instruments and instruments with a maturity of one year or less at the time of acquisition, the Fund's strategy will result in frequent portfolio trading and high portfolio turnover (typically greater than 300% per year).

A significant portion of the assets of the Fund may be invested directly or indirectly in money market instruments, which may include, but are not be limited to, U.S. Government securities (including U.S. treasury bills), U.S. government agency securities, short-term fixed-income securities, overnight and/or fixed term repurchase agreements, money market mutual fund shares, and cash and cash equivalents with one year or less term to maturity. These cash or cash equivalent holdings may serve as collateral or coverage for the positions the Fund takes and also earn income for the Fund.

For temporary defensive purposes, when purchases or redemptions require, or during transitions, the Fund may deviate very substantially from the allocation described above.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Commodity risk Commodity prices can be extremely volatile and may be directly or indirectly affected by many factors, including changes in overall market movements, real or perceived inflationary trends, commodity index volatility, changes in interest rates or currency exchange rates, population growth and changing demographics, and factors affecting a particular industry or commodity, such as drought, floods, or other weather conditions, livestock disease, trade embargoes, competition from substitute products, transportation bottlenecks or shortages, fluctuations in supply and demand, tariffs, and international regulatory, political, and economic developments (e.g., regime changes and changes in economic activity levels).
- Commodity-linked derivatives risk The value of a commodity-linked derivative investment is typically based upon the price movements of a commodity, a commodity futures contract or commodity index, or some other readily measurable economic variable. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, volatility of the underlying benchmark, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, volatility in the spot market, and political and regulatory developments. The value of commodity-linked derivatives will rise or fall in response to changes in the underlying commodity or related index. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. A liquid secondary market may not exist for certain commodity-linked derivatives, and there can be no assurance that one will develop. Commodity-linked derivatives also may be subject to credit and interest rate risks that generally affect the values of fixed-income securities. Therefore, at maturity, the Fund may receive more or less principal than it originally invested. The Fund may also receive interest payments that are more or less than the stated coupon interest payments.
- Commodities regulatory risk Commodity-related operating companies typically are subject to significant foreign, federal, state and local government regulation in virtually every aspect of their operations, including how facilities are constructed, maintained and operated, environmental and safety controls, and the prices they may charge for the products and services they provide. The U.S. Commodity Futures Trading Commission ("CFTC") and the exchanges on which futures contracts are traded are authorized to take extraordinary actions in the event of a market emergency, including, for example, increasing margin requirements, establishing daily limits and suspending trading. In addition, compliance with certain CFTC requirements may increase the Fund's expenses. Future regulatory developments may impact the Fund's ability to invest in commodity-linked derivatives.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.

- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Short sales risk A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Model risk* The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and

other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

- Forward foreign currency exchange contracts risk Forward foreign currency exchange contracts do not eliminate fluctuations in the value of non-U.S. securities but rather allow the Fund to establish a fixed rate of exchange for a future point in time. This strategy can have the effect of reducing returns and minimizing opportunities for gain.
- Hedging transactions risk The Sub-Adviser from time to time employs various hedging techniques. The success of the Fund's hedging strategy will be subject to the Sub-Adviser's ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Since the characteristics of many securities change as markets change or time passes, the success of the Fund's hedging strategy will also be subject to the Sub-Adviser's ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. For a variety of reasons, the Sub-Adviser may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs (such as trading commissions and fees).
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Credit risk* The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Currency management strategies risk Currency management strategies may substantially change the Fund's exposure to currency exchange rates and could result in losses to the Fund if currencies do not perform as the investment manager expects. In addition, currency management strategies, to the extent that they reduce the Fund's exposure to currency risks, may also reduce the Fund's ability to benefit from favorable changes in currency exchange rates. Using currency management strategies for purposes other than hedging further increases the Fund's exposure to foreign investment losses. Currency markets generally are not as regulated as securities markets. In addition, currency rates may fluctuate significantly over short periods of time, and can reduce returns.
- Exchange-traded note risk The value of an exchange-traded note ("ETN") may be influenced by maturity, level of supply and demand for the ETN, volatility and lack of liquidity in the underlying securities' markets, changes in the applicable interest rates, changes in the issuer's credit rating and economic, legal, political or geographic events that affect the referenced index. In addition, the notes issued by ETNs and held by the Fund are unsecured debt of the issuer.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Investment in money market funds risk Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. An investment in a money market fund is not insured or guaranteed by a Federal Deposit Insurance Corporation or any other government agency. Although such funds seek to maintain a net asset value of \$1.00 per share, it is possible to lose money by investing in a money market fund.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Sovereign debt risk Investments issued by a governmental entity are subject to the risk that the governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt due to, among other things, cash flow problems, insufficient foreign currency reserves, political considerations, the relative size of the governmental entity's debt position in relation to the economy or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies. If a governmental entity defaults, it may ask for more time in which to pay its debt, request additional loans or otherwise restructure its debt. There is no legal process for collecting sovereign debt that a government does not pay nor are there bankruptcy proceedings through which all or part of the sovereign debt may be collected.
- Swaps risk Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject to the general risks relating to derivatives described herein. The Dodd–Frank Act mandates a new regulatory framework for trading swaps in the United States. Standardized swaps will be required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The regulations to implement the Dodd–Frank Act are still being developed so there may be further changes to the system intended to safeguard the collateral of parties to swaps.

• U.S. Government securities risk — Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

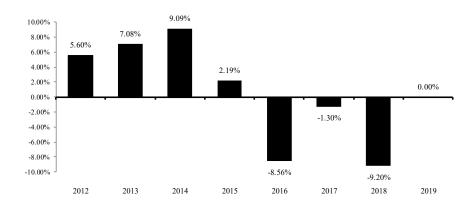

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Credit Suisse Managed Futures Index with the SG Trend Index as the Fund's secondary benchmark.

Annual Total Returns as of December 31

Class A

Best Quarter (ended 12/31/2014): 9.30%; Worst Quarter (ended 12/31/2016): -7.90%

Ari Levine, M.S.	2016	Principal, AQR

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

JNL/BlackRock Advantage International Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to provide long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.55%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.16%
Acquired Fund Fees and Expenses ²	0.01%
Total Annual Fund Operating Expenses	1.02%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/BlackRock Advantage International Fund Class A			
1 year	3 years	5 years	10 years
\$104	\$325	\$563	\$1,248

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
6/24/2019 - 12/31/2019	86%

Principal Investment Strategies. Under normal circumstances, the Fund seeks to invest at least 80% of its net assets (plus the amount of any borrowings for investment purposes) in non-U.S. equity securities and equity-like instruments of companies that are components of the companies included in the MSCI EAFE® Index (the "Index") and derivatives that are tied economically to securities of the Index. The Index is a capitalization-weighted index from a broad range of industries chosen for market size, liquidity, and industry group representation. Equity securities include common stock, preferred stock, and convertible securities. The Fund primarily seeks to buy common stock and may also invest in preferred stock and convertible securities.

From time to time, the Fund may invest in shares of companies through "new issues" or initial public offerings ("IPOs"). The Fund will invest in securities of non-U.S. issuers that can be U.S. dollar based or non-U.S. dollar based on a hedged or unhedged basis. The Fund may enter into currency transactions on a hedged or unhedged basis in order to seek total return.

The Fund may use derivatives, including options, futures, swaps, forward contracts, and contracts for difference, both to seek to increase the return of the Fund and to hedge (or protect) the value of its assets against adverse movements in currency exchange rates, interest rates and movements in the securities markets. In order to manage cash flows into or out of the Fund effectively, the Fund may buy and sell financial futures contracts or options on such contracts.

The Fund may seek to provide exposure to the investment returns of real assets that trade in the commodity markets through investment in commodity-linked derivative instruments and investment vehicles such as exchange-traded funds that invest exclusively in commodities and are designed to provide this exposure without direct investment in physical commodities.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.

- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Convertible securities risk Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Hedging instruments risk The Fund may attempt, from time to time, to hedge (protect) against currency risks, largely using forward foreign currency exchange contracts, where available and when, in the Sub-Adviser's opinion, it would be advantageous to the Fund. A forward foreign currency exchange contract is an agreement to buy or sell a specific currency at a future date and at a price set at the time of the contract. Forward foreign currency exchange contracts may reduce the risk of loss from a change in value of a currency, but they also limit any potential gains and do not protect against fluctuations in the value of the underlying position. For example, during periods when the U.S. dollar weakens in relation to a foreign currency, the Fund's use of a currency hedging program will result in lower returns than if no currency hedging programs were in effect. Forward foreign currency exchange contracts and put options are considered derivative investments, because their value and performance depend, at least in part, on the value and performance of an underlying asset. The Fund may also use futures, swaps, and other derivative instruments to hedge risk. The Fund's investment in derivatives may involve a small investment relative to the amount of risk assumed. To the extent the Fund enters into these transactions, its success will depend on the Sub-Adviser's ability to predict market movements, and their use may have the opposite effect of that intended. Risks include potential loss due to the imposition of controls by a government on the exchange of foreign currencies, the loss of any premium paid to enter into the transaction, delivery failure, default by any other party, or inability to close out a position because the trading market becomes illiquid. In

addition, for certain reasons, the Fund may not seek to establish a perfect correlation between such hedging instruments and the portfolio instruments being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. It is not possible to hedge fully or perfectly against any risk.

- Investments in IPOs risk IPOs issued by unseasoned companies with little or no operating history are risky and highly volatile.
- *Preferred stock risk* Preferred stock represents an equity interest in a company that generally entitles the holder to receive, in preference to the holders of other stocks such as common stocks, dividends and a fixed share of the proceeds resulting from a liquidation of the company.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Options risk If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.
- Swaps risk Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject to the general risks relating to derivatives described herein. The Dodd—Frank Act mandates a new regulatory framework for trading swaps in the United States. Standardized swaps will be required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The regulations to implement the Dodd–Frank Act are still being developed so there may be further changes to the system intended to safeguard the collateral of parties to swaps.
- Commodity risk Commodity prices can be extremely volatile and may be directly or indirectly affected by many factors, including changes in overall market movements, real or perceived inflationary trends, commodity index volatility, changes in interest rates or currency exchange rates, population growth and changing demographics, and factors affecting a particular industry or commodity, such as drought, floods, or other weather conditions, livestock disease, trade embargoes, competition from substitute products, transportation bottlenecks or shortages, fluctuations in supply and demand, tariffs, and international regulatory, political, and economic developments (e.g., regime changes and changes in economic activity levels).
- Commodity-linked derivatives risk The value of a commodity-linked derivative investment is typically based upon the price movements of a commodity, a commodity futures contract or commodity index, or some other readily measurable economic variable. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, volatility of the underlying benchmark, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, volatility in the spot market, and political and regulatory developments. The value of commodity-linked derivatives will rise or fall in response to changes in the underlying commodity or related index. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. A liquid secondary market may not exist for certain commodity-linked derivatives, and there can be no assurance that one will develop. Commodity-linked derivatives also may be subject to credit and interest rate risks that generally affect the values of fixed-income securities. Therefore, at maturity, the Fund may receive more or less principal than it originally invested. The Fund may also receive interest payments that are more or less than the stated coupon interest payments.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. Performance for the Fund has not been included because the Fund has less than one full calendar year of operations.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

JNL/BlackRock Global Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is high total investment return.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses	
(Expenses that you pay each year as a percentage of the value of your i	nvestment)
	Class A
Management Fee	0.57%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ^{1,2}	0.16%
Total Annual Fund Operating Expenses ³	1.03%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the

^{2 &}quot;Other Expenses" are based on amounts incurred during the period ended December 31, 2019. The amount includes financing costs associated with secured borrowings. The annualized ratios of financing costs related to secured borrowings were 0.01%. The Fund's actual financing costs may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's involvement with secured borrowings and the costs associated with those transactions, each of which is expected to vary over time.

³ Expense information has been restated to reflect current fees.

end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/BlackRock Global Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$105	\$328	\$569	\$1,259

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	203%

Principal Investment Strategies. The Fund invests in a portfolio of equity, debt and money market securities. Generally, the Fund will invest in both equity and debt securities. For purposes of this Fund, equity securities include common stock, rights and warrants, preferred stock, securities convertible into common stock, or securities or other instruments whose price is linked to the value of common stock. For purposes of this Fund, debt securities include, but are not limited to, U.S. and foreign government bonds, corporate bonds, convertible bonds, structured notes, credit-linked notes, mortgage- and asset-backed securities, loan assignments and loan participations, and securities issued by certain international organizations such as the World Bank. The Fund uses derivatives as a means of managing exposure to foreign currencies and other adverse market movements, as well as to increase returns.

At any given time, the Fund may emphasize either debt securities or equity securities; however, over time the Fund's portfolio of assets will tend to be relatively balanced between equity and debt securities and widely diversified among many individual investments. In selecting equity investments, the Fund mainly seeks securities that BlackRock Investment Management, LLC ("Sub-Adviser") believes are undervalued. The Fund may buy debt securities with varying maturities. The Fund may invest up to 35% of its total assets in high yield or junk bonds, corporate loans and distressed securities. Junk bonds are fixed-income securities rated below investment-grade by independent rating agencies or are bonds that are unrated but that the Sub-Adviser believes are of comparable quality. The Fund may invest in corporate loans.

When choosing investments, the Sub-Adviser considers various factors, including opportunities for equity or debt investments to increase in value, expected dividends and interest rates. The Fund generally seeks diversification across markets, industries and issuers as one of its strategies to reduce volatility. The Fund may invest in the securities of companies of any market capitalization. Market capitalization is the number of shares of a company's stock, multiplied by the price per share of that stock. Market capitalization is a measure of a company's size.

Generally, the Fund may invest in the securities of corporate and governmental issuers located anywhere in the world in both developed and emerging markets. The Fund may emphasize foreign securities when the Sub-Adviser expects these investments to outperform U.S. securities. When choosing investment markets, the Sub-Adviser considers various factors, including economic and political conditions, potential for economic growth and possible changes in currency exchange rates. In addition to investing in foreign securities, the Fund actively manages its exposure to foreign currencies through the use of forward currency contracts and other currency derivatives. From time to time, the Fund may own foreign cash equivalents or foreign bank deposits as part of the Fund's investment strategy. The Fund will also invest in non-U.S. currencies, however, the Fund may underweight or overweight a currency based on the Sub-Adviser's outlook.

The Fund's composite "Reference Benchmark" has at all times since the Fund's formation included a 40% weighting in non-U.S. securities. The Reference Benchmark is an unmanaged weighted index comprised as follows: 36% of the Standard & Poor's ("S&P") 500 Index; 24% FTSE World (ex-U.S.) Index; 24% ICE BofAML Current 5-Year US Treasury Index; and 16% FTSE Non-US Dollar World Government Bond Index.

Throughout its history, the Fund has maintained a weighting in non-U.S. securities, often exceeding the 40% Reference Benchmark weighting and rarely falling below this allocation. Under normal circumstances, the Fund anticipates it will continue to allocate a substantial amount (approximately 40% or more — unless market conditions are not deemed favorable by the Sub-Adviser, in which case the Fund would invest at least 30%) — of its total assets in securities of (i) foreign government issuers; (ii) issuers organized or located outside the U.S.; (iii) issuers which primarily trade in a market located outside the U.S.; or (iv) issuers doing a substantial amount of business outside the U.S., which the Fund considers to be companies that derive at least 50% of their revenue or profits from business outside the U.S. or have at least 50% of their sales or assets outside the U.S. The Fund will allocate its assets among various regions and countries, including the United States (but in no less than three different countries). For temporary defensive purposes, when purchases or redemptions require, or during transitions, the Fund may deviate very substantially from the allocation described above.

The Fund may use derivatives, including options, futures, indexed securities, inverse securities, swaps and forward contracts both to seek to increase in the return of the Fund and to hedge (or protect) the value of its assets against adverse movements in currency exchange rates, interest rates and movements in the securities markets.

The Fund may invest in Real Estate Investment Trusts ("REITs"). The Fund may also seek to provide exposure to the investment returns of real assets that trade in the commodity markets through investment in commodity-linked derivative instruments, such as structured notes, and other investment vehicles that exclusively invest in commodities, such as exchange-traded funds ("ETFs"). The Fund may invest up to 25% of its total assets in commodity-related instruments (which may include, among others, commodity options, futures, swaps on commodity futures, ETFs that invest in commodities, and commodity-linked structured notes) (collectively, "Commodities").

Total investment return is the combination of capital appreciation and investment income.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations.
- Privately placed securities risk The Fund's investments may also include privately-placed securities, which are subject to resale restrictions. Investments in these securities usually will decrease a Fund's liquidity level to the extent the Fund may be unable to sell or transfer these securities due to restrictions on transfers or on the ability to find buyers interested in purchasing the securities. The illiquid nature of the market for privately placed securities, as well as the lack of publicly available information regarding these securities, may also adversely affect the Fund's ability to fair value such securities at certain times and could make it difficult for the Fund to sell them. The Fund could lose money on such investments.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Call risk Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates.
- Commodities regulatory risk Commodity-related operating companies typically are subject to significant foreign, federal, state and local government regulation in virtually every aspect of their operations, including how facilities are constructed, maintained and operated, environmental and safety controls, and the prices they may charge for the products and services they provide. The U.S. Commodity Futures Trading Commission ("CFTC") and the exchanges on which futures contracts are traded are authorized to take extraordinary actions in the event of a market emergency, including, for example, increasing margin requirements, establishing daily limits and suspending trading. In addition, compliance with certain CFTC requirements may increase the Fund's expenses. Future regulatory developments may impact the Fund's ability to invest in commodity-linked derivatives.
- Commodity risk Commodity prices can be extremely volatile and may be directly or indirectly affected by many factors, including changes in overall market movements, real or perceived inflationary trends, commodity index volatility, changes in interest rates or currency exchange rates, population growth and changing demographics, and factors affecting a particular industry or commodity, such as drought, floods, or other weather conditions, livestock disease, trade embargoes, competition from substitute products, transportation bottlenecks or shortages, fluctuations in supply and demand, tariffs, and international regulatory, political, and economic developments (e.g., regime changes and changes in economic activity levels).
- Commodity-linked derivatives risk The value of a commodity-linked derivative investment is typically based upon the price movements of a commodity, a commodity futures contract or commodity index, or some other readily measurable economic variable. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, volatility of the underlying benchmark, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, volatility in the spot market, and political and regulatory developments. The value of commodity-linked derivatives will rise or fall in response to changes in the underlying commodity or related index. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. A liquid secondary market may not exist for certain commodity-linked derivatives, and there can be no assurance that one will develop. Commodity-linked derivatives also may be subject to credit and interest rate risks that generally affect the values of fixed-income securities. Therefore, at maturity, the Fund may receive more or less principal than it originally invested. The Fund may also receive interest payments that are more or less than the stated coupon interest payments.
- Commodity-linked notes risk Commodity-linked notes involve substantial risks, including the risk of loss of a significant portion of their principal value. In addition to commodity risk and derivatives risk, they may be subject to additional risks, such as risk of loss of interest and principal, lack of secondary market and risk of greater volatility, that do not affect traditional equity and debt securities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.

- Convertible securities risk Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- Corporate loan, sovereign entity loan, and bank loan risk Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- Custody risk The Fund may invest in securities markets that are less developed than those in the U.S., which may expose the Fund to risks in the process of clearing and settling trades and the holding of securities by local banks, agents and depositories. Some foreign banks and securities depositories may be recently organized or new to the foreign custody business. In addition, there may be limited or no regulatory oversight of their operations. Also, the laws of certain countries may limit a Fund's ability to recover its assets if a foreign bank, depository or issuer of a security, or any of their agents, goes bankrupt. Custody risk is heightened in countries with less developed securities markets.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Distressed debt risk The Fund may invest in securities of issuers that are, or are about to be, involved in reorganizations, financial restructurings, or bankruptcy (also known as "distressed debt"). Such distressed debt securities involve substantial risk in addition to the risks of investing in lower-grade debt securities. To the extent that the Fund invests in distressed debt, the Fund is subject to the risk that it may lose a portion or all or its investment in the distressed debt and may incur higher expenses trying to protect its interests in distressed debt.
- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- Extension risk When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a

market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Forward foreign currency exchange contracts risk Forward foreign currency exchange contracts do not eliminate fluctuations in the value of non-U.S. securities but rather allow the Fund to establish a fixed rate of exchange for a future point in time. This strategy can have the effect of reducing returns and minimizing opportunities for gain.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Options risk If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.
- Pacific Rim investing risk The Pacific Rim economies are in various stages of economic development. Many of the Pacific Rim economies may be intertwined, so they may experience recessions at the same time. Furthermore, many of the Pacific Rim economies are characterized by high inflation, undeveloped financial services sectors, heavy reliance on international trade, frequent currency fluctuations, devaluations, or restrictions, political and social instability, and less efficient markets. If the Fund concentrates investments in Pacific Rim markets, the Fund's performance is expected to be closely tied to social, political, and economic conditions within the Pacific Rim region and to be more volatile than the performance of more geographically diversified funds.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

- Real estate investment risk Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Sovereign debt risk Investments issued by a governmental entity are subject to the risk that the governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt due to, among other things, cash flow problems, insufficient foreign currency reserves, political considerations, the relative size of the governmental entity's debt position in relation to the economy or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies. If a governmental entity defaults, it may ask for more time in which to pay its debt, request additional loans or otherwise restructure its debt. There is no legal process for collecting sovereign debt that a government does not pay nor are there bankruptcy proceedings through which all or part of the sovereign debt may be collected.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Structured note risk A Fund may invest in notes, sometimes called "structured notes," linked to the performance of securities or commodities. Commodity-linked structured notes provide exposure, which may include long and/or short exposure, to the investment returns of "real assets" (i.e., assets that have tangible properties such as oil, gold and silver) that trade in the commodities markets without investing directly in physical commodities. The performance of these notes is determined by the price movement of the commodities underlying the note. These notes are subject to the credit risk of the issuing party and may be less liquid than other types of securities. This means that a Fund may lose money if the issuer of the note defaults and that a Fund may not be able to readily close out its investment in such notes without incurring losses.
- Swaps risk Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject to the general risks relating to derivatives described herein. The Dodd–Frank Act mandates a new regulatory framework for trading swaps in the United States. Standardized swaps will be required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The regulations to implement the Dodd-Frank Act are still being developed so there may be further changes to the system intended to safeguard the collateral of parties to swaps.
- Tax risk In order for a regulated investment company ("RIC") to qualify as such under Subchapter M of the Internal Revenue Code of 1986, as amended (the "Internal Revenue Code" or the "Code"), including certain of the series of registered investment companies that invest in the Fund, the RIC must derive at least 90% of its gross income each taxable year from "qualifying income," which is described in more detail in the SAI. Income and gains from certain commodity-linked instruments do not constitute "qualifying income" to a RIC for purposes of the 90% gross income test. The tax treatment of some other commodity-linked instruments in which a Fund might invest is not certain, in particular with respect to whether income or gains from such instruments constitute qualifying income to a RIC. In general, for purposes of the 90% gross income requirement, income derived from a partnership will be treated as qualifying income only to the extent such income is attributable to items of income of the partnership which would be qualifying income if realized directly by the RIC. The Fund will therefore annually restrict its income from commodities and commodity-linked derivative instruments, such as commodity-linked swaps, and other assets that give rise to non-qualifying income to a maximum of 10% of the Fund's gross income.

- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.
- LIBOR replacement risk In addition to other interbank offered rates, the most common benchmark rate for floating rate securities is London Interbank Offered Rate (LIBOR), which is the rate of interest offered on short-term interbank deposits, as determined by trading between major international banks. The UK Financial Conduct Authority has announced that LIBOR rates will no longer be published after the end of 2021. The elimination of LIBOR may adversely affect the interest rates on, and value of, certain Fund investments for which the value is tied to LIBOR. Alternatives to LIBOR are established or in development in most major currencies, including the Secured Overnight Financing Rate (SOFR) that is intended to replace U.S. dollar LIBOR. Markets are slowly developing in response to these new reference rates. However, questions around the rate transition's effect on the liquidity of securities and how to appropriately adjust these rates at the time of transition remain undetermined for the Fund. The effects of discontinuation of LIBOR on the Fund will vary, and it is difficult to predict the full impact of the transition away from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new products, instruments and contracts are commercially accepted and market practices become more settled.

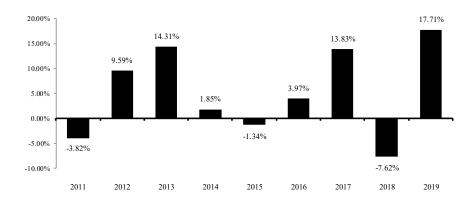

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to August 29, 2011 reflects the Fund's results when managed under a master-feeder structure. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the 36% S&P 500 Index, 24% FTSE World (ex-U.S.) Index, 24% Bank of America Merrill Lynch Current 5-Year U.S. Treasury Index, 16% FTSE Non-U.S. Dollar World Government Bond Index as the Fund's secondary benchmark.

Rick Rieder	April 2019	Managing Director, BlackRock, Inc.
Russ Koesterich, CFA, JD	January 2017	Managing Director, BlackRock, Inc.
David Clayton, CFA, JD	January 2017	Managing Director, BlackRock, Inc.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

JNL/BlackRock Global Natural Resources Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term capital growth.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses	
(Expenses that you pay each year as a percentage of the value of your i	nvestment)
	Class A
Management Fee	0.55%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.15%
Total Annual Fund Operating Expenses	1.00%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/BlackRock Global Natural Resources Fund Class A				
1 year	3 years	5 years	10 years	
\$102	\$318	\$552	\$1,225	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period		
1/1/2019 - 12/31/2019	71%	

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing primarily in equity securities of companies with substantial natural resource assets. Under normal circumstances, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in companies with substantial natural resource assets or in securities the value of which is related to the market value of some natural resource assets. Equity securities include common stock, preferred stock, securities convertible into common stock, rights to subscribe for common stock, and derivative securities or instruments, such as options, the value of which is based on a common stock or group of common stocks.

Generally, a company has substantial natural resource assets when at least 50% of the non-current assets, capitalization, gross revenues or operating profits of the company in the most recent or current fiscal year are involved in or result from (directly or indirectly through subsidiaries), oil, gas, exploring, mining, extracting, refining, processing, transporting, fabricating, dealing in or owning natural resource assets. Examples of natural resource assets include precious metals (e.g., gold, silver and platinum), ferrous and nonferrous metals (e.g., iron, aluminum and copper), strategic metals (e.g., uranium and titanium), water, hydrocarbons (e.g., coal, oil and natural gas), timber land, underdeveloped real property and agricultural products (e.g., fertilizers and agricultural chemicals). The Fund normally invests in a portfolio consisting of companies in a variety of natural resource related sectors, such as energy, chemicals, oil, gas, paper, mining, steel or agricultural products. Under certain circumstances, however, the Fund may concentrate its investments in one or more of these sectors.

Generally, the Fund may invest in the securities of corporate and governmental issuers located anywhere in the world in both developed and emerging markets (but in no fewer than three countries).

In addition, the Fund will concentrate its investments in one or more issuers in the natural resources related industries. The Fund focuses on investments in companies that provide exposure to commodities where BlackRock International Limited, the Fund's subadviser, sees attractive supply-and-demand dynamics. The Fund will normally invest in both U.S. and non-U.S. companies, including companies located in emerging markets, and in securities denominated in both U.S. dollars and foreign currencies. The Fund may invest in securities of issuers with any market capitalization. There are no geographic limits on the Fund's investments.

The Fund may use derivatives to hedge its investment portfolio against market, interest rate and currency risks or to seek to enhance its return. The derivatives that the Fund may use include indexed and inverse securities, options, futures, swaps and forward foreign exchange transactions.

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Natural resource related securities risk Because the Fund concentrates its investments in natural resource related securities, the Fund is subject to the risks associated with natural resource investments in addition to the general risk of the stock market. This means the Fund is more vulnerable to the price movements of natural resources and factors that particularly affect the oil, gas, mining, energy, chemicals, paper, steel or agriculture sectors than a more broadly diversified fund. Because the Fund invests

- primarily in companies with natural resource assets, there is the risk that the Fund will perform poorly during a downturn in natural resource prices.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Precious metals-related securities risk Prices of precious metals and of precious metals-related securities historically have been very volatile. The high volatility of precious metal prices may adversely affect the financial condition of companies involved with precious metals. The production and sale of precious metals by governments or central banks or other larger holders can be affected by various economic, financial, social and political factors, which may be unpredictable and may have a significant impact on the prices of precious metals. Other factors that may affect the prices of precious metals and securities related to them include changes in inflation, the outlook for inflation and changes in industrial and commercial demand for precious metals.
- Commodity risk Commodity prices can be extremely volatile and may be directly or indirectly affected by many factors, including changes in overall market movements, real or perceived inflationary trends, commodity index volatility, changes in interest rates or currency exchange rates, population growth and changing demographics, and factors affecting a particular industry or commodity, such as drought, floods, or other weather conditions, livestock disease, trade embargoes, competition from substitute products, transportation bottlenecks or shortages, fluctuations in supply and demand, tariffs, and international regulatory, political, and economic developments (e.g., regime changes and changes in economic activity levels).
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a

market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.

- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Forward foreign currency exchange contracts risk Forward foreign currency exchange contracts do not eliminate fluctuations in the value of non-U.S. securities but rather allow the Fund to establish a fixed rate of exchange for a future point in time. This strategy can have the effect of reducing returns and minimizing opportunities for gain.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

- Prepayment risk During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Swaps risk Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject to the general risks relating to derivatives described herein. The Dodd—Frank Act mandates a new regulatory framework for trading swaps in the United States. Standardized swaps will be required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The regulations to implement the Dodd–Frank Act are still being developed so there may be further changes to the system intended to safeguard the collateral of parties to swaps.
- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

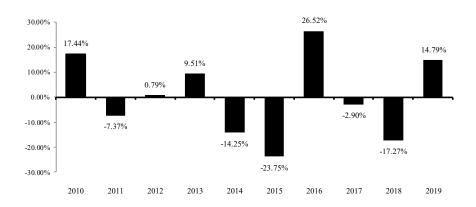

Effective April 27, 2020, the Fund will be combined with JNL/VanEck International Gold Fund, a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Consistent with the Fund's principal investment strategies, the Fund uses the 75% MSCI Natural Resources Index (Net), 25% Bloomberg Commodity Index as the Fund's secondary benchmark.

Effective December 31, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the S&P Global Natural Resources Index with the S&P Global Natural Resources Index (Net) as the Fund's primary benchmark.

Annual Total Returns as of December 31

Class A

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/BlackRock Large Cap Select Growth Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.47%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.10%	
Total Annual Fund Operating Expenses	0.87%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/BlackRock Large Cap Select Growth Fund Class A			
1 year	3 years	5 years	10 years
\$89	\$278	\$482	\$1,073

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	44%

Principal Investment Strategies. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities of U.S. large capitalization companies. The Fund defines large capitalization companies as those with a market capitalization of at least \$2.0 billion at the time of investment. In addition, up to 20% of the Fund's net assets may be invested in foreign equity securities. Investments in equity securities include common stock and preferred stock, convertible securities, as well as American Depositary Receipts ("ADRs"). The Fund may, but is not required to, use exchange-traded or over-the-counter derivative instruments for risk management purposes or as part of the Fund's investment strategies. The derivatives in which the Fund may invest include futures and forward currency agreements and may also be used to hedge against a specific currency. In addition, futures on indices may be used for investment (non-hedging) purposes to seek to earn income; to enhance returns; to replace more traditional direct investments; or to obtain exposure to certain markets.

In selecting securities, the BlackRock Investment Management, LLC ("Sub-Adviser") seeks to invest in companies that possess dominant market positions or franchises, a major technological edge, or a unique competitive advantage. To this end, the Sub-Adviser considers earnings revision trends, expected earnings growth rates, sales acceleration, price earnings multiples and positive stock price momentum, when selecting securities. The Sub-Adviser expects that these companies can sustain an above average return on invested capital at a higher level and over a longer period of time than is reflected in the current market prices.

In deciding whether an investment is tied to the U.S., the Sub-Adviser considers a number of factors including whether the investment is issued or guaranteed by the U.S. government or any of its agencies; the investment has its primary trading market in the U.S.; the issuer is organized under the laws of, derives at least 50% of its revenues from, or has at least 50% of its assets in, the U.S.; the investment is included in an index representative of the U.S.; or the investment is exposed to the economic fortunes and risks of the U.S.

For temporary defensive purposes during unusual economic or market conditions or for liquidity purposes, the Fund may invest up to 100% of its assets in cash, money market instruments, repurchase agreements and other short-term obligations. When the Fund engages in such activities, it may not achieve its investment objective.

The Fund maintains the flexibility to invest in securities of companies from a variety of sectors, but from time to time, based on economic conditions, the Fund may have significant investments in particular sectors.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Convertible securities risk Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles,

different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).

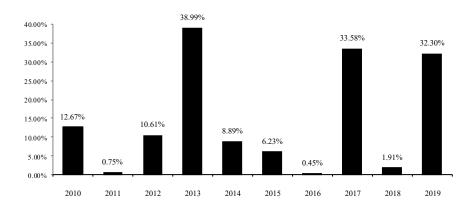

- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Mid-capitalization investing risk The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Preferred stock risk* Preferred stock represents an equity interest in a company that generally entitles the holder to receive, in preference to the holders of other stocks such as common stocks, dividends and a fixed share of the proceeds resulting from a liquidation of the company.
- Information technology sector risk Information technology companies face intense competition and potentially rapid product obsolescence. They are also heavily dependent on intellectual property rights and may be adversely affected by the loss or impairment of those rights.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to April 30, 2012 reflects the Fund's results when managed by the previous sub-adviser, Capital Guardian Trust Company. Performance from April 30, 2012 through September 15, 2013, reflects the Fund's results when managed by the previous sub-adviser, UBS Global Asset Management (Americas) Inc. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Phil Ruvinsky	April 2020	Managing Director, BlackRock, Inc.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Boston Partners Global Long Short Equity Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	1.10%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ^{1,2}	1.00%	
Acquired Fund Fees and Expenses ³	0.01%	
Total Annual Fund Operating Expenses	2.41%	

- ¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- 2 "Other Expenses" are based on amounts incurred during the period ended December 31, 2019. The amount includes the costs associated with the Fund's short sales on equity securities. When a cash dividend is declared on a security for which the Fund holds a short position, the Fund incurs the obligation to pay an amount equal to that dividend to the lender of the shorted security. In addition, the Fund incurs borrowing fees related to short sale transactions. The annualized ratios of dividend expense on short sales and borrowing fees related to short sales to assets for the period were 0.84%. The Fund's actual dividend expense and borrowing fees on securities sold short in future periods may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's short positions, the actual dividends paid with respect to the securities the Fund sells short, and the actual timing of the Fund's short sale transactions, each of which is expected to vary over time. The annualized ratios of dividend expense on short sales and borrowing fees related to short sales have been restated to reflect current fees.
- ³ Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Boston Partners Global Long Short Equity Fund Class A			
1 year 3 years 5 years 10 years			
\$244	\$751	\$1,285	\$2,746

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	117%

Principal Investment Strategies. The Fund invests in long positions in stocks identified by the Sub-Adviser, Boston Partners Global Investors, Inc. ("Boston Partners") as undervalued and takes short positions in stocks that Boston Partners has identified as overvalued. The cash proceeds from short sales will be invested in short-term cash instruments to produce a return on such proceeds just below the federal funds rate. The Fund will invest, both long and short, in securities issued by U.S. and non-U.S. companies of any capitalization size. With a long position, the Fund purchases a stock outright; with a short position, the Fund sells a security that it does not own and must borrow to meet its settlement obligations. The Fund may invest in securities of companies operating for three years or less ("unseasoned issuers"). Boston Partners will determine the size of each long or short position by analyzing the tradeoff between the attractiveness of each position and its impact on the risk of the overall portfolio. Selection of individual securities to be held long or sold short will be based on a mix of quantitative techniques and fundamental security analysis. Boston Partners selects stocks on the basis of three criteria: valuation, business fundamentals and business momentum. Boston Partners examines various factors in determining the value characteristics of such issuers including price-to-book value ratios and price-to-earnings ratios. These value characteristics are examined in the context of the issuer's operating and financial fundamentals, including return on equity, earnings growth and cash flow. Boston Partners selects securities for the Fund based on a continuous study of trends in industries and companies, earnings power and growth and other investment criteria.

The Fund may invest in all types of equity and equity-related securities, including without limitation exchange traded and over-the-counter common and preferred stocks, warrants, options, rights, convertible securities, sponsored and unsponsored depositary receipts and shares, trust certificates, limited partnership interests, shares of other investment companies (including exchanged-traded funds ("ETFs")), real estate investment trusts ("REITs") and equity participations. An equity participation is a type of loan that gives the lender a portion of equity ownership in a property, in addition to principal and interest payments. A convertible security is a bond, debenture, note, preferred stock or other security that may be converted into or exchanged for a prescribed amount of common stock of the same or a different issuer within a particular period of time at a specified price or formula.

The Fund defines non-U.S. companies as companies (i) that are organized under the laws of a foreign country; (ii) whose principal trading market is in a foreign country; or (iii) that have a majority of their assets, or that derive a significant portion of their revenue or profits from businesses, investments or sales, outside of the United States. Under normal market conditions, the Fund invests significantly (ordinarily at least 40% —unless market conditions are not deemed favorable by Boston Partners, in which case the Fund would invest at least 30%) in non-U.S. companies. The Fund principally will be invested in issuers located in countries with developed securities markets, but may also invest in issuers located in emerging markets. The Fund will allocate its assets among various regions and countries, including the United States (but in no less than three different countries).

The Fund's portfolio is rebalanced regularly. Boston Partners assesses each investment's changing characteristics relative to its contribution to portfolio risk. Boston Partners will sell an investment held long or close out a short position that Boston Partners believes no longer offers an appropriate return-to-risk tradeoff.

Under normal circumstances, Boston Partners expects to sell securities short so that the Fund's portfolio is approximately 50% net long with an average of between 30% and 70% net long.

The Fund may participate as a purchaser in initial public offerings of securities ("IPO"). An IPO is a company's first offering of stock to the public.

The Fund may invest from time to time a significant portion of its assets in smaller issuers which are more volatile and less liquid than investments in issuers with a market capitalization greater than \$1 billion.

The Fund may invest up to 15% of its net assets in illiquid securities that are assets.

The Fund may invest up to 20% of its net assets in high yield debt obligations, such as bonds and debentures, used by U.S. and foreign corporations and other business organizations (e.g. trusts or limited liability companies). Such high yield debt obligations are not considered to be investment grade. Non-investment grade fixed-income securities (commonly known as "junk bonds") are rated BB or lower by Standard & Poor's Rating Group, or have a comparable rating by another nationally recognized statistical rating organization ("NRSRO") (or, if unrated are determined by Boston Partners to be of comparable quality at the time of investment). The Fund may invest in securities of the lowest rating category, including securities in default. Boston Partners may, but is not required to, sell a bond or note held by the Fund in the event that its credit rating is downgraded.

The Fund may (but is not required to) invest in derivatives, including put and call options, futures, forward contracts and swaps, in lieu of investing directly in a security, currency or instrument, for hedging and non-hedging purposes. When trading derivatives, the Fund may be required to post securities to a segregated account. Asset segregation may be required for short sales and for many, but not all, derivatives transactions, including swaps, options, futures, forwards and contracts for differences. The Fund expects to utilize contracts for differences to maintain a significant portion of its short positions.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect

a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- *Investment style risk* The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to

increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).

- Investments in IPOs risk IPOs issued by unseasoned companies with little or no operating history are risky and highly volatile.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- *Model risk* The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- Pacific Rim investing risk The Pacific Rim economies are in various stages of economic development. Many of the Pacific Rim economies may be intertwined, so they may experience recessions at the same time. Furthermore, many of the Pacific Rim economies are characterized by high inflation, undeveloped financial services sectors, heavy reliance on international trade, frequent currency fluctuations, devaluations, or restrictions, political and social instability, and less efficient markets. If the Fund concentrates investments in Pacific Rim markets, the Fund's performance is expected to be closely tied to social, political, and economic conditions within the Pacific Rim region and to be more volatile than the performance of more geographically diversified funds.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Segregated account risk A security held in a segregated account cannot be sold while the position it is covering is outstanding, unless it is replaced with a similar security. As a result, there is a possibility that segregation of a large percentage of the Fund's assets could impede portfolio management or the Fund's ability to meet redemption requests or other current obligations.
- Short sales risk A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the

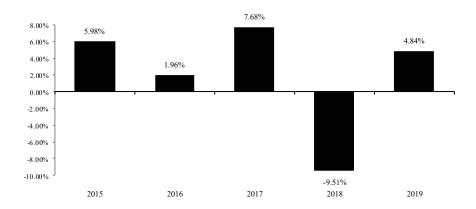

- Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Swaps risk Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject to the general risks relating to derivatives described herein. The Dodd–Frank Act mandates a new regulatory framework for trading swaps in the United States. Standardized swaps will be required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The regulations to implement the Dodd-Frank Act are still being developed so there may be further changes to the system intended to safeguard the collateral of parties to swaps.
- *Unseasoned issuers risk* Unseasoned issuers may not have an established financial history and may have limited product lines, markets or financial resources. Unseasoned issuers may depend on a few key personnel for management and may be susceptible to losses and risks of bankruptcy. As a result, such securities may be more volatile and difficult to sell.
- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the

Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Causeway International Value Select Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital and income through investment primarily in larger capitalization equity securities.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses	
(Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.52%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.15%
Total Annual Fund Operating Expenses	0.97%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

l	JNL/Causeway International Value Select Fund Class A			
	1 year	3 years	5 years	10 years
	\$99	\$309	\$536	\$1,190

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	30%

Principal Investment Strategies. The Fund invests primarily in common stocks of companies in developed countries outside the U.S. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in stocks of companies in a number of foreign countries and invests the majority of its total assets in companies that pay dividends or repurchase their shares. The Fund may invest up to 15% of its total assets in companies in emerging (less developed) markets.

When investing the Fund's assets, Causeway Capital Management LLC ("Sub-Adviser") follows a value style, performing fundamental research supplemented by quantitative analysis. Beginning with a universe of companies throughout the non-U.S. developed and emerging markets, the Sub-Adviser uses quantitative market capitalization and valuation screens to narrow the potential investment candidates to approximately 2,000 securities. To select investments, the Sub-Adviser then performs fundamental research, which generally includes company-specific research, company visits, and interviews of suppliers, customers, competitors, industry analysts, and experts. The Sub-Adviser also applies a proprietary quantitative risk model to adjust return forecasts based on risk assessments. Using a value style means that the Sub-Adviser buys stocks that it believes have lower prices than their true worth. For example, stocks may be "undervalued" because the issuing companies are in industries that are currently out of favor with investors. However, even in those industries, certain companies may have high rates of growth of earnings and be financially sound.

The Sub-Adviser considers whether a company has each of the following value characteristics in purchasing or selling securities for the Fund:

- Low price-to-earnings ratio (stock price divided by earnings per share) relative to the sector;
- High yield (percentage rate of return paid on a stock in dividends and share repurchases) relative to the market;
- Low price-to-book value ratio (stock price divided by book value per share) relative to the market;
- Low price-to-cash flow ratio (stock price divided by net income plus noncash charges per share) relative to the market; and
- Financial strength.

Generally, price-to-earnings and yield are the most important factors.

The Fund generally invests in companies with market capitalizations greater than \$5 billion at time of investment, but may invest in companies with any market capitalization. There are no limitations on the minimum amount or maximum amount that the Fund may invest in any particular country.

The Sub-Adviser determines a company's country by referring to: its stock exchange listing; where it is registered, organized or incorporated; where its headquarters are located; its MSCI country classification; where it derives at least 50% of its revenues or profits from goods produced or sold, investments made, or services performed; or where at least 50% of its assets are located. These categories are designed to identify investments that are tied economically to, and subject to the risks of, investing outside the U.S. The Fund considers a country to be an emerging market if the country is included in the MSCI Emerging Markets Index.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially

those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Dividend-paying stock risk Dividend-paying stocks may underperform non-dividend paying stocks (and the stock market as a whole) over any period of time. The prices of dividend-paying stocks may decline as interest rates increase. In addition, issuers of dividend-paying stocks typically have discretion to defer or stop paying dividends. If the dividend-paying stocks held by an account reduce or stop paying dividends, the account's ability to generate income may be adversely affected.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal

agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.

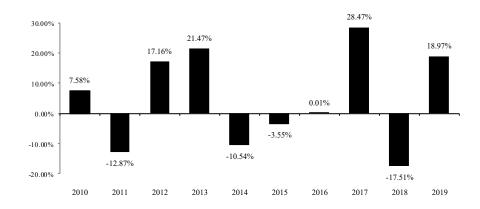

- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *Model risk* The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to September 28, 2015, reflects the Fund's results when managed by the former sub-adviser, J.P. Morgan Investment Management Inc. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/ClearBridge Large Cap Growth Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term capital growth.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.50%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	0.96%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/ClearBridge Large Cap Growth Fund Class A			
1 year	3 years	5 years	10 years
\$98	\$306	\$531	\$1,178

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	19%

Principal Investment Strategies. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities or other equity investments with similar economic characteristics of U.S. companies with large market capitalizations.

The core holdings of the Fund are large-capitalization companies that ClearBridge Investments, LLC ("ClearBridge" or "Sub-Adviser") believes to be dominant in their industries due to product, distribution or service strength. ClearBridge emphasizes individual security selection while diversifying the Fund's investments across industries, which may help to reduce risk. ClearBridge attempts to identify established large-capitalization companies with the highest growth potential. ClearBridge then analyzes each company in detail, ranking its management, strategy and competitive market position. Finally, ClearBridge attempts to identify the best values available among the growth companies identified. ClearBridge may sell a security if it no longer meets the Fund's investment criteria or for other reasons, including to meet redemptions or to redeploy assets to better investment opportunities.

The Fund uses a focused approach of investing in a smaller number of issuers, which may result in significant exposure to certain industries or sectors, such as the information technology and internet technology services.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

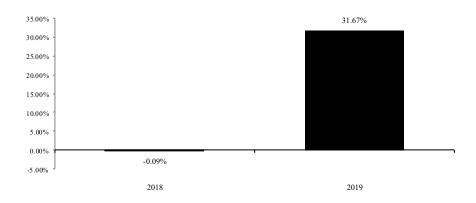

- Information technology sector risk Information technology companies face intense competition and potentially rapid product obsolescence. They are also heavily dependent on intellectual property rights and may be adversely affected by the loss or impairment of those rights.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

Class A

Best Quarter (ended 3/31/2019): 15.70%; Worst Quarter (ended 12/31/2018): -13.29%

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/DFA Growth Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

• Mailing in the postage-paid card on the cover of this report;

Total Annual Fund Operating Expenses After Waiver/Reimbursement⁴

- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek total return consisting of capital appreciation and current income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses		
Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.20%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Acquired Fund Fees and Expenses ²	0.29%	
Total Annual Fund Operating Expenses ⁴	0.94%	
Less Waiver/Reimbursement ³	0.12%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

0.82%

- ² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.
- ³ JNAM has contractually agreed to waive 0.05% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees. JNAM has also contractually agreed to waive a varying portion of the management fees of the Fund to prevent any increase in total expenses in the Fund due to its investment in the JNL/DFA International Core Equity Fund. This fee waiver arrangement will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of

Trustees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/DFA Growth Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$84	\$288	\$508	\$1,144

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	45%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of DFA Investment Dimensions Group Inc. and Dimensional Investment Group Inc. (collectively, "DFA Fund Groups"). Not all Funds of DFA Fund Groups are available as Underlying Funds. The Fund may also invest in the Class I shares of the JNL/DFA International Core Equity Fund. Please refer to the statutory prospectus for a list of available Underlying Funds.

To achieve its investment objective, the Fund under normal market circumstances, allocates its assets to Underlying Funds that invest in equity and fixed-income securities. Generally, the Fund invests its assets in domestic and international equity Underlying Funds and fixed-income Underlying Funds to achieve an allocation of approximately 60% to 100% (with a target allocation of approximately 80%) of the Fund's assets to domestic and international equity Underlying Funds and 0% to 40% (with a target allocation of approximately 20%) of its assets to fixed-income Underlying Funds. The equity and fixed-income allocation may fall outside of the above limits in a volatile market environment where investment outcomes are expected to remain beyond normal range.

Within these asset classes, the Fund remains flexible with respect to the percentage it will allocate among Underlying Funds. In determining allocations to any particular Underlying Fund, the Fund's investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

In addition to its allocation strategy of providing exposure to the domestic and international equity and fixed-income markets through investment in the Underlying Funds, the Fund further diversifies its investment portfolio by allocating its assets among Underlying Funds that represent a variety of different asset classes. As of the date of this prospectus, the Fund invests in: (1) domestic equity Underlying Funds that purchase a broad and diverse portfolio of securities of U.S. operating companies of all market capitalization sizes with an emphasis on small and value companies, and a domestic equity Underlying Fund that primarily invests in publicly traded REITs; (2) international equity Underlying Funds that purchase a broad and diverse portfolio of securities of companies in developed and emerging markets of all market capitalization sizes with an emphasis on small and value companies; and (3) fixed-income Underlying Funds that may purchase U.S. and foreign debt securities such as obligations issued or guaranteed by the U.S. and foreign governments, their agencies and instrumentalities, bank obligations, commercial paper, repurchase agreements, obligations of other domestic and foreign issuers, securities of domestic and foreign issuers denominated in U.S. dollars but not trading in the United States, obligations of supranational organizations and inflation-protected securities.

The Fund and each Underlying Fund may use derivatives, such as futures contracts and options on futures contracts, to adjust market exposure based on actual or expected cash inflows to or outflows from the Fund or Underlying Fund. Certain fixed-income Underlying Funds use foreign currency contracts to hedge foreign currency risks, hedge against fluctuations in currency exchange rates or to transfer balances from one currency to another. Certain fixed-income Underlying Funds also may enter into credit default swaps on issuers or indices to buy or sell credit protection to hedge its credit exposure; gain market or issuer exposure without owning the underlying securities; or increase the Underlying Fund's total return. Certain fixed-income Underlying Funds also may use derivatives, such as futures contracts and options on futures contracts, to hedge interest rate or currency exposure or for non-hedging

⁴ Expense information has been restated to reflect current fees.

purposes, such as a substitute for direct investment. Also, the Underlying Funds may lend their portfolio securities to generate additional income.

Some of the Underlying Funds, particularly those classified as fixed income, may hold a significant amount of junk bonds in order to execute their investment strategy.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such
 factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate
 mix of asset classes based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and
 economic conditions in the selection and percentages of allocations.
- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization and small-capitalization investing risk* The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign

currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- High-yield bonds, lower-rated bonds, and unrated securities risk High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *Profitability investment risk* High relative profitability stocks may perform differently from the market as a whole and following a profitability-oriented strategy may cause the Fund to at times underperform equity funds that use other investment strategies.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

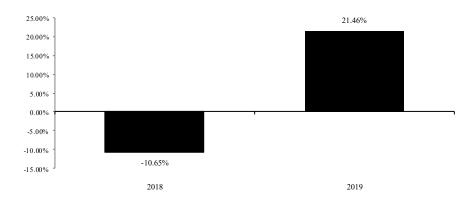

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Aggressive Index with the Morningstar Moderately Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 80% MSCI All Country World Index (Net), 20% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/DFA Moderate Growth Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek total return consisting of capital appreciation and current income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
Management Fee	0.20%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Acquired Fund Fees and Expenses ²	0.27%	
Total Annual Fund Operating Expenses ⁴	0.92%	
Less Waiver/Reimbursement ³	0.10%	
Total Annual Fund Operating Expenses After Waiver/Reimbursement ⁴	0.82%	

- ¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.
- ³ JNAM has contractually agreed to waive 0.05% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees. JNAM has also contractually agreed to waive a varying portion of the management fees of the Fund to prevent any increase in total expenses in the Fund due to its investment in the JNL/DFA International Core Equity Fund. This fee waiver arrangement will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of

Trustees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/DFA Moderate Growth Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$84	\$283	\$500	\$1,122

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	35%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of DFA Investment Dimensions Group, Inc. and Dimensional Investment Group Inc. (collectively, "DFA Fund Groups"). Not all Funds of DFA Fund Groups are available as Underlying Funds. The Fund may also invest in the Class I shares of the JNL/DFA International Core Equity Fund. Please refer to the statutory prospectus for a list of available Underlying Funds.

To achieve its investment objective, the Fund under normal market circumstances, allocates its assets to Underlying Funds that invest in equity and fixed-income securities. Generally, the Fund invests its assets in domestic and international equity Underlying Funds and fixed-income Underlying Funds to achieve an allocation of approximately 40% to 80% (with a target allocation of approximately 60%) of the Fund's assets to domestic and international equity Underlying Funds and 20% to 60% (with a target allocation of approximately 40%) of its assets to fixed-income Underlying Funds. The equity and fixed-income allocation may fall outside of the above limits in a volatile market environment where investment outcomes are expected to remain beyond normal range.

Within these asset classes, the Fund remains flexible with respect to the percentage it will allocate among Underlying Funds. In determining allocations to any particular Underlying Fund, the Fund's investment adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

In addition to its allocation strategy of providing exposure to the domestic and international equity and fixed-income markets through investment in the Underlying Funds, the Fund further diversifies its investment portfolio by allocating its assets among Underlying Funds that represent a variety of different asset classes. As of the dated of this prospectus, the Fund invests in: (1) domestic equity Underlying Funds that purchase a broad and diverse portfolio of securities of U.S. operating companies of all market capitalization sizes with an emphasis on small and value companies, and a domestic equity Underlying Fund that primarily invests in publicly traded REITs; (2) international equity Underlying Funds that purchase a broad and diverse portfolio of securities of companies in developed and emerging markets of all market capitalization sizes with an emphasis on small and value companies; and (3) fixed-income Underlying Funds that may purchase U.S. and foreign debt securities such as obligations issued or guaranteed by the U.S. and foreign governments, their agencies and instrumentalities, bank obligations, commercial paper, repurchase agreements, obligations of other domestic and foreign issuers, securities of domestic and foreign issuers denominated in U.S. dollars but not trading in the United States, obligations of supranational organizations and inflation-protected securities.

The Fund and each Underlying Fund may use derivatives, such as futures contracts and options on futures contracts, to adjust market exposure based on actual or expected cash inflows to or outflows from the Fund or Underlying Fund. Certain fixed-income Underlying Funds use foreign currency contracts to hedge foreign currency risks, hedge against fluctuations in currency exchange rates or to transfer balances from one currency to another. Certain fixed-income Underlying Funds also may enter into credit default swaps on issuers or indices to buy or sell credit protection to hedge its credit exposure; gain market or issuer exposure without owning the underlying securities; or increase the Underlying Fund's total return. Certain fixed-income Underlying Funds also may use derivatives, such as futures contracts and options on futures contracts, to hedge interest rate or currency exposure or for non-hedging

⁴ Expense information has been restated to reflect current fees.

purposes, such as a substitute for direct investment. Also, the Underlying Funds may lend their portfolio securities to generate additional income.

Some of the Underlying Funds, particularly those classified as fixed income, may hold a significant amount of junk bonds in order to execute their investment strategy.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations.
- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign

currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *Profitability investment risk* High relative profitability stocks may perform differently from the market as a whole and following a profitability-oriented strategy may cause the Fund to at times underperform equity funds that use other investment strategies.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

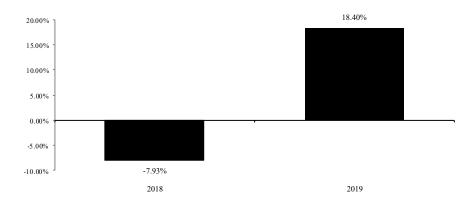

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderate Index with the Morningstar Moderate Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 60% MSCI All Country World Index (Net), 40% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/DFA International Core Equity Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to achieve long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.45%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Total Annual Fund Operating Expenses ²	0.91%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Expense information has been restated to reflect current fees.

JNL/DFA International Core Equity Fund Class A			
1 year	3 years	5 years	10 years
\$93	\$290	\$504	\$1,120

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
6/24/2019 - 12/31/2019	5%

Principal Investment Strategies. Under normal circumstances, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in non-U.S. equity securities and/or investments that provide exposure to non-U.S. securities. The Fund purchases a broad and diverse group of securities of non-U.S. companies in developed markets with a greater emphasis on small-capitalization, value, and high-profitability companies as compared to their representation in the International Universe. Dimensional Fund Advisors LP, the Fund's sub-adviser ("Sub-Adviser"), generally defines the "International Universe" as a market capitalization weighted portfolio of non-U.S. companies in developed markets that have been authorized as approved markets for investment by the Sub-Adviser. The Fund's increased exposure to small-capitalization, value, and highprofitability companies may be achieved by decreasing the allocation of the Fund's assets to the largest growth or low profitability companies relative to their weight in the International Universe, which would result in a greater weight allocation to smallcapitalization, value, and/or high-profitability companies. The Sub-Adviser considers an equity issuer to be a growth company primarily because it has a high price in relation to its book value. The Sub-Adviser considers securities to be value stocks primarily because a company's shares have a low price in relation to their book value. In assessing growth and value, the Sub-Adviser may consider additional factors such as price-to-cash flow or price-to-earnings ratios, as well as economic conditions and developments in the issuer's industry. In assessing profitability, the Sub-Adviser may consider different ratios, such as that of earnings or profits from operations relative to book value or assets. The criteria the Sub-Adviser uses for assessing growth, value, or profitability are subject to change from time to time.

Under normal circumstances, the Fund intends to invest at least 40% of its assets in three or more non-U.S. countries by investing in securities of companies associated with such countries.

The Fund intends to purchase securities of companies associated with developed market countries that the Sub-Adviser has designated as approved markets. The Sub-Adviser determines company size on a country- or region-specific basis and based primarily on market capitalization. The percentage allocation of the assets of the Fund to securities of the largest growth companies will generally be reduced from between 5% and 35% of their percentage weight in the International Universe. The percentage by which the Fund's allocation to securities of the largest growth companies is reduced will change due to market movements and other factors. The Sub-Adviser may also adjust the representation in the Fund of an eligible company, or exclude a company, after considering such factors as free float, momentum, trading strategies, liquidity, size, value, profitability, and other factors that the Sub-Adviser determines to be appropriate, given market conditions.

The Fund may gain exposure to companies associated with approved markets by purchasing equity securities in the form of depositary receipts, which may be listed or traded outside the issuer's domicile country. The Fund also may purchase or sell futures contracts and options on futures contracts for foreign or U.S. equity securities and indices, to adjust market exposure based on actual or expected cash inflows to or outflows from the Fund. The Fund does not intend to sell futures contracts to establish short positions in individual securities or to use derivatives for purposes of speculation or leveraging investment returns.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

• Equity securities risk – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market.
 Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Profitability investment risk* High relative profitability stocks may perform differently from the market as a whole and following a profitability-oriented strategy may cause the Fund to at times underperform equity funds that use other investment strategies.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Cybersecurity risk Cyber attacks could cause business failures or delays in daily processing and the Fund may need to delay transactions, consistent with regulatory requirements, as a result could impact the performance of the Fund.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets,

confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.

- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. Performance for the Fund has not been included because the Fund has less than one full calendar year of operations.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

Dimensional Fund Advisors LP ("DFA")

Portfolio Managers:

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/DFA U.S. Core Equity Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.40%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.10%	
Total Annual Fund Operating Expenses	0.80%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/DFA U.S. Core Equity Fund Class A			
1 year	3 years	5 years	10 years
\$82	\$255	\$444	\$990

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	9%

Principal Investment Strategies. Under normal market conditions, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities of U.S. companies. The Fund purchases a broad and diverse group of common stocks of U.S. companies with a greater emphasis on small capitalization, value and high profitability companies as compared to their representation in the U.S. Universe. The Sub-Adviser generally defines the "U.S. Universe" as a free float adjusted market capitalization weighted portfolio of U.S. operating companies listed on a securities exchange in the United States that is deemed appropriate by the Sub-Adviser. The Fund's increased exposure to small capitalization, value and high profitability companies may be achieved by decreasing the allocation of the Fund's assets to the largest U.S. growth or low profitability companies relative to their weight in the U.S. Universe, which would result in a greater weight allocation to small capitalization, value and/or high profitability companies. An equity issuer is considered a growth company primarily because it has a high price in relation to its book value. An equity issuer is considered a value company primarily because it has a low price in relation to its book value. In assessing growth and value, the Sub-Adviser may consider additional factors such as price to cash flow earnings ratios. In assessing profitability, the Sub-Adviser may consider different ratios such as that of earnings or profits from operations relative to book value or assets. The criteria the Sub-Adviser uses for assessing growth, value, or profitability are subject to change from time to time.

The percentage allocation of the assets of the Fund to securities of the largest U.S. growth companies as defined above will generally be reduced from between 2.5% and 25% of their percentage weight in the U.S. Universe. The percentage by which the Fund's allocation to securities of the largest U.S. growth companies is reduced will change due to market movements. The Sub-Adviser may also adjust the representation in the Fund of an eligible company, or exclude a company, after considering such factors as free float, momentum, trading strategies, liquidity, size, value, profitability, and other factors that the Sub-Adviser determines to be appropriate, given market conditions.

The Fund may purchase or sell futures contracts and options on futures contracts for equity securities and indices, to adjust market exposure based on actual or expected cash inflows to or outflows from the Fund. The Fund, however, does not intend to sell futures contracts to establish short positions in individual securities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Profitability investment risk* High relative profitability stocks may perform differently from the market as a whole and following a profitability-oriented strategy may cause the Fund to at times underperform equity funds that use other investment strategies.

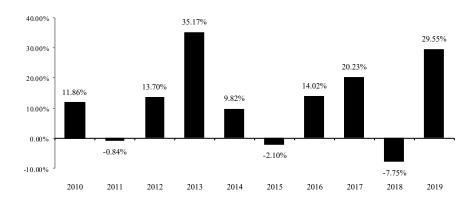

- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Cybersecurity risk Cyber attacks could cause business failures or delays in daily processing and the Fund may need to delay transactions, consistent with regulatory requirements, as a result could impact the performance of the Fund.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to April 30, 2012 reflects the Fund's results when managed by the former sub-adviser, Eagle Asset Management, Inc. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Lukas J. Smart	April 2017	Senior Portfolio Manager and Vice President, DFA

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts.

You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/DFA U.S. Small Cap Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to achieve long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.55%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Total Annual Fund Operating Expenses ²	1.00%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Expense information has been restated to reflect current fees.

JNL/DFA U.S. Small Cap Fund Class A				
1 year		3 years	5 years	10 years
\$102		\$318	\$552	\$1,225

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	26%

Principal Investment Strategies. The Fund, using a market capitalization weighted approach, purchases a broad and diverse group of the common stocks of U.S. small-capitalization companies. A company's market capitalization is the number of its shares outstanding times its price per share. In general, the higher the relative market capitalization of the U.S. small-capitalization company, the greater its representation in the Fund. Dimensional Fund Advisors LP, the Fund's sub-adviser ("Sub-Adviser"), may adjust the representation in the Fund of an eligible company, or exclude a company, after considering such factors as free float, momentum, trading strategies, liquidity, value, profitability and other factors that the Sub-Adviser determines to be appropriate, given market conditions. Securities are considered value stocks primarily because a company's shares have a low price in relation to their book value. In assessing value, the Sub-Adviser may consider additional factors such as price to cash flow or price to earnings ratios. In assessing profitability, the Sub-Adviser may consider different ratios, such as that of earnings or profits from operations relative to book value or assets. The criteria the Sub-Adviser uses for assessing value or profitability are subject to change from time to time.

As a non-fundamental policy, under normal circumstances, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in securities of U.S. small-capitalization companies. As of the date of this Prospectus, for the purposes of the Fund, the Sub-Adviser considers small-capitalization companies to be companies whose market capitalizations are generally in the lowest 10% of total market capitalization or companies whose market capitalizations are smaller than the 1,000th largest U.S. company, whichever results in the higher market capitalization break. Total market capitalization is based on the market capitalization of U.S. operating companies listed on a securities exchange in the United States that is deemed appropriate by the Sub-Adviser. Under the Sub-Adviser's market capitalization guidelines described above, based on market capitalization data as of December 31, 2019, the market capitalization of a small-capitalization company would be \$6.5 billion or below. This threshold will change due to market conditions.

The Fund may purchase or sell futures contracts and options on futures contracts for equity securities and indices, to adjust market exposure based on actual or expected cash inflows to or outflows from the Fund. The Fund, however, does not intend to sell futures contracts to establish short positions in individual securities or to use derivatives for purposes of speculation or leveraging investment returns.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset,

- interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Cybersecurity risk Cyber attacks could cause business failures or delays in daily processing and the Fund may need to delay transactions, consistent with regulatory requirements, as a result could impact the performance of the Fund.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Fund's Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- *Profitability investment risk* High relative profitability stocks may perform differently from the market as a whole and following a profitability-oriented strategy may cause the Fund to at times underperform equity funds that use other investment strategies.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. Performance information prior to September 25, 2017 reflects the Fund's results using its prior principal investment strategy. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/DFA U.S. Small Cap Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/DoubleLine® Core Fixed Income Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek to maximize current income and total return.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses				
(Expenses that you pay each year as a percentage of the value of your investment)				
	Class A			
Management Fee	0.37%			
Distribution and/or Service (12b-1) Fees	0.30%			
Other Expenses ¹	0.10%			
Total Annual Fund Operating Expenses	0.77%			

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/DoubleLine® Core Fixed Income Fund Class A				
1 year	3 years	5 years	10 years	
\$79	\$246	\$428	\$954	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	53%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of fixed-income instruments of varying maturities, which may be represented by forwards or derivatives such as options, futures contracts, or swap agreements. For purposes of satisfying the 80% requirement, the Fund may also invest in derivative instruments that have economic characteristics similar to the fixed-income instruments mentioned above. "Fixed-Income instruments" include but are not limited to securities issued or guaranteed by the United States Government, its agencies, instrumentalities or sponsored corporations; corporate obligations (including foreign subordinated or junior subordinated bank debt, including Tier 1 preferred or hybrid bank debt, and Tier 2 debt); mortgage-backed securities; asset-backed securities ("ABS"); foreign securities (corporate, currencies and government); emerging market securities (corporate, quasi-sovereigns and government); bank loans and assignments; ABS loans and other securities bearing fixed or variable interest rates of any or no maturity. Such Fixed-Income instruments may be indexed to inflation by certain issuers. In managing the Fund's investments, under normal market conditions, the portfolio manager intends to seek to construct an investment portfolio with a weighted average effective duration of no less than two years and no more than eight years, as calculated by DoubleLine Capital LP ("DoubleLine"). Duration is a measure of the expected life of a fixed-income security that is used to determine the sensitivity of a security's price to changes in interest rates.

The Fund invests primarily in investment grade debt securities, but may invest up to 33 1/3% of its total assets in high-yield securities ("junk bonds"), bank loans or assignments rated BB+ or lower by Moody's or equivalently rated by S&P Global Ratings, Fitch Inc., Kroll, DBRS, Morningstar, or any other NRSRO, or, if unrated, determined by DoubleLine to be of comparable quality. DoubleLine does not consider the term "junk bonds" to include mortgage-backed securities or any other ABS, regardless of their credit rating or credit quality.

The Fund may invest up to 30% of its total assets in securities or derivatives denominated in foreign currencies, and may invest beyond this limit in U.S. dollar-denominated securities of foreign issuers.

The Fund may invest up to 30% of its total assets in securities and instruments that are economically tied to emerging market countries.

The Fund may invest all of its assets in derivative instruments, such as options, futures contracts or swap agreements, or in mortgage-backed securities or ABS. The Fund may purchase or sell securities on a when-issued, delayed delivery or forward commitment basis and may engage in short sales.

The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a Fund of purchase and sale contracts or by using other investment techniques (such as buybacks or dollar rolls). The "total return" sought by the Fund consists of income earned on the Fund's investments, plus capital appreciation, if any, which generally arises from decreases in interest rates or improving credit fundamentals for a particular sector or security.

The Fund may also invest up to 10% of its total assets in preferred stock, convertible securities and other equity related securities. The Fund may invest in other investment companies, including, for example, other open-end or closed-end investment companies, exchange-traded funds ("ETFs"), and domestic or foreign private investment vehicles, including investment companies sponsored or managed by DoubleLine or its affiliates. The Fund may invest in securities issued by companies in the financial services sector.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Call risk Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates.
- Convertible securities risk Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While

equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.

- Corporate loan, sovereign entity loan, and bank loan risk Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Debt securities ratings risk The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Extension risk When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest

rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.

- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Inflation-indexed securities risk Inflation-indexed securities have a tendency to react to changes in real interest rates. Real interest rates represent nominal (stated) interest rates lowered by the anticipated effect of inflation. In general, the price of an inflation-indexed security can decrease when real interest rates increase, and can increase when real interest rates decrease. Interest payments on inflation-indexed securities will fluctuate as the principal and/or interest is adjusted for inflation and can be unpredictable. In periods of deflation, the Fund may not receive any income from such investments. In certain interest rate environments, such as when real interest rates are rising faster than normal interest rates, inflation-indexed securities may experience greater losses than other fixed-income securities with similar durations.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.

- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- Options risk If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Prepayment risk During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- Real estate investment risk Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.
- Restricted securities risk Restricted securities are subject to legal restrictions on their sale and may not be sold to the public without an effective registration statement. Before they are registered, such securities may be sold only in a privately negotiated transaction or pursuant to an exemption from registration. Restricted securities may be illiquid. The Fund may be unable to sell them on short notice or may be able to sell them only at a price below current value. Also, the Fund may get only limited information about the issuer of a restricted security, so it may be less able to predict a loss. In addition, if Fund management receives certain material nonpublic information about the issuer, the Fund may be unable to sell the securities in accordance with laws and regulations prohibiting insider trading.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet

redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.

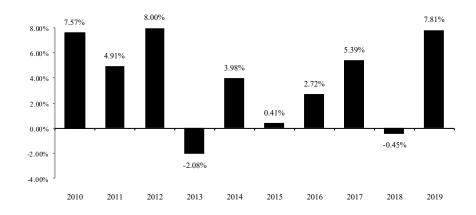

- Short sales risk A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- Swaps risk Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject to the general risks relating to derivatives described herein. The Dodd–Frank Act mandates a new regulatory framework for trading swaps in the United States. Standardized swaps will be required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The regulations to implement the Dodd-Frank Act are still being developed so there may be further changes to the system intended to safeguard the collateral of parties to swaps.
- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.
- LIBOR replacement risk In addition to other interbank offered rates, the most common benchmark rate for floating rate securities is London Interbank Offered Rate (LIBOR), which is the rate of interest offered on short-term interbank deposits, as determined by trading between major international banks. The UK Financial Conduct Authority has announced that LIBOR rates will no longer be published after the end of 2021. The elimination of LIBOR may adversely affect the interest rates on, and value of, certain Fund investments for which the value is tied to LIBOR. Alternatives to LIBOR are established or in development in most major currencies, including the Secured Overnight Financing Rate (SOFR) that is intended to replace U.S. dollar LIBOR. Markets are slowly developing in response to these new reference rates. However, questions around the rate transition's effect on the liquidity of securities and how to appropriately adjust these rates at the time of transition remain undetermined for the Fund. The effects of discontinuation of LIBOR on the Fund will vary, and it is difficult to predict the full impact of the transition away from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new products, instruments and contracts are commercially accepted and market practices become more settled.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to September 25, 2017 reflects the Fund's results when managed by the former sub-adviser, Pacific Investment Management Company LLC. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts.

You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/DoubleLine® Emerging Markets Fixed Income Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek high total return from current income and capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses				
(Expenses that you pay each year as a percentage of the value of your investment)				
	Class A			
Management Fee	0.62%			
Distribution and/or Service (12b-1) Fees	0.30%			
Other Expenses ¹	0.15%			
Acquired Fund Fees and Expenses ²	0.01%			
Total Annual Fund Operating Expenses ³	1.08%			

- ¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.
- ³ Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the

end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/DoubleLine® Emerging Markets Fixed Income Fund Class A			
1 year	3 years	5 years	10 years
\$110	\$343	\$595	\$1,317

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	34%

Principal Investment Strategies. Under normal circumstances, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in fixed-income instruments with exposure to emerging markets countries. These fixed-income instruments include but are not limited to securities issued or guaranteed by companies (including foreign hybrid securities), financial institutions and government entities in emerging market countries and other securities bearing fixed or variable interest rates of any or no maturity. The Fund will generally invest in at least four emerging market countries.

An "emerging market country" is a country that, at the time of investment, is classified as an emerging or developing economy by any supranational organization such as the United Nations, or similar entity, or is considered an emerging market country for purposes of constructing a major emerging market securities index. In addition, DoubleLine Capital LP ("Sub-Adviser") has broad discretion to identify other countries that it considers to be emerging market countries. In determining whether an issuer of non-sovereign debt is in an emerging market country, the Sub-Adviser will generally look to the issuer's "country of risk", as classified in Bloomberg. Bloomberg's determination of "country of risk" is based on a number of criteria, including country of domicile, country of primary listing, country of majority revenue, and reporting currency. The Sub-Adviser may also classify a non-sovereign issuer as an emerging market issuer on a basis other than Bloomberg's "country of risk" classification.

The Fund may invest, without limitation, in fixed-income instruments of any credit quality, including those that at the time of investment are unrated or rated BB+ or lower by S&P or Ba1 or lower by Moody's or the equivalent by any other nationally recognized statistical rating organization or unrated securities judged by the Sub-Adviser to be of comparable quality. Corporate bonds and certain other fixed-income instruments rated below investment grade, or such instruments that are unrated and determined by the Sub-Adviser to be of comparable quality, are high yield, high risk bonds, commonly known as junk bonds. The Fund may invest in hybrid securities relating to emerging market countries.

The Fund may invest up to 15% of its net assets in defaulted corporate securities. The Fund might do so, for example, where the Sub-Adviser believes the restructured enterprise valuations or liquidation valuations may exceed current market values. In addition, the Fund may invest in defaulted sovereign investments, including, for example, where the Sub-Adviser believes the expected debt sustainability of the country is not reflected in current market valuations. The Fund may invest in derivatives and other instruments, such as options, swaps (including credit default swaps), futures, structured investments, foreign currency futures and forward contracts. These practices may be used to hedge the Fund's portfolio as well as for investment purposes; however, such practices sometimes may reduce returns or increase volatility.

In allocating investments among various emerging market countries, the Sub-Adviser attempts to analyze internal political, market and economic factors. These factors may include:

- public finances;
- monetary policy;
- external accounts;
- financial markets;
- foreign investment regulations;
- stability of exchange rate policy; and
- labor conditions.

In managing the Fund's investments, under normal market conditions, the Sub-Adviser intends to seek to construct an investment portfolio with a weighted average effective duration of no less than two years and no more than eight years. Duration is a measure of the expected life of a fixed-income instrument that is used to determine the sensitivity of a security's price to changes in interest rates. Effective duration is a measure of the Fund's portfolio duration adjusted for the anticipated effect of interest rate changes on bond and mortgage pre-payment rates. The effective duration of the Fund's investment portfolio may vary materially from its target range, from

time to time, and there is no assurance that the effective duration of the Fund's investment portfolio will always be within its target range.

The Fund may invest without limit in investments denominated in any currency, but currently expects to invest a substantial amount of its assets in investments denominated in the U.S. dollar.

Portfolio securities may be sold at any time. By way of example, sales may occur when the Fund's Sub-Adviser perceives deterioration in the credit fundamentals of the issuer, when the Sub-Adviser believes there are negative macro geo-political considerations that may affect the issuer, when the Sub-Adviser determines to take advantage of a better investment opportunity, or when the individual security has reached the Sub-Adviser's sell target.

The Fund may lend its securities to increase its income.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Debt securities ratings risk The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Extension risk When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.

- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Government regulatory risk Certain industries or sectors, including, but not limited to, real estate, financial services, utilities, oil and natural gas exploration and production, and health care are subject to increased regulatory requirements. There can be no guarantee that companies in which the Fund invests will meet all applicable regulatory requirements. Certain companies could incur substantial fines and penalties for failing to meet government regulatory requirements. These requirements may also result in additional compliance expenses and costs. Such increased regulatory compliance costs could hurt a company's performance.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.

- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Prepayment risk During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Sovereign debt risk Investments issued by a governmental entity are subject to the risk that the governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt due to, among other things, cash flow problems, insufficient foreign currency reserves, political considerations, the relative size of the governmental entity's debt position in relation to the economy or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies. If a governmental entity defaults, it may ask for more time in which to pay its debt, request additional loans or otherwise restructure its debt. There is no legal process for collecting sovereign debt that a government does not pay nor are there bankruptcy proceedings through which all or part of the sovereign debt may be collected.
- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.

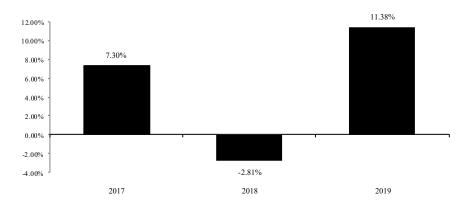

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 27, 2020, the Fund will be combined with JNL/Goldman Sachs Emerging Markets Debt Fund (the "Acquired Fund"), with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the

Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/DoubleLine[®] Shiller Enhanced CAPE[®] Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek total return (capital appreciation and current income) which exceeds the total return of its benchmark.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.56%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses ³	1.03%	

- ¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.
- ³ Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the

end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/DoubleLine® Shiller Enhanced CAPE® Fund Class A				
1 year	3 years	5 years	10 years	
\$105	\$328	\$569	\$1,259	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	52%

Principal Investment Strategies. The Fund seeks to achieve its objective by looking to achieve total return (capital appreciation and current income) in excess of the Shiller Barclays CAPE[®] US Sector II ER USD Index (the "Index").

The Fund will seek to use derivatives, or a combination of derivatives and direct investments, to provide a return that tracks closely the performance of the Index. The Fund will also invest in a portfolio of debt securities to seek to provide additional long-term total return. The Fund uses investment leverage in seeking to provide both the Index return and the return on a portfolio of debt securities; it is likely that the Fund will have simultaneous exposures both to the Index and to debt securities, in each case in an amount potentially up to the value of the Fund's assets. It is possible that the Fund could lose money at the same time on both its investments in debt securities and its exposure to the Index.

The Fund will normally use derivatives in an attempt to create an investment return approximating the Index's return. The transaction pricing of any swap transaction will reflect a number of factors, including the limited availability of the Index, that will cause the return on the swap transaction to underperform the Index. Please see "Note regarding Index-Based Swaps" in the Prospectus for more information. The Fund expects to use only a small percentage of its assets to attain the desired exposure to the Index because of the structure of the derivatives the Fund expects to use. As a result, use of those derivatives along with other investments will create investment leverage in the Fund's portfolio. In certain cases, however, such derivatives might be unavailable or the pricing of those derivatives might be unfavorable; in those cases, the Fund might attempt to replicate the Index return by purchasing some or all of the securities comprising the Index at the time. If the Fund at any time invests directly in the securities comprising the Index, those assets will be unavailable for investment in debt instruments, and the Fund's ability to pursue its investment strategy and achieve its investment objective may be limited.

To the extent use of the above-described derivatives strategy leaves a substantial portion of the Fund's assets available for other investment by the Fund, the Fund expects to invest those assets in a portfolio of debt instruments managed by DoubleLine Capital LP (the "Sub-Adviser") to seek to provide additional long-term total return.

The Index incorporates the principles of long-term investing distilled by Dr. Robert Shiller and expressed through the CAPE® (Cyclically Adjusted Price Earnings) ratio (the "CAPE® Ratio"). The Index aims to identify undervalued sectors based on a modified CAPE® Ratio, and then uses a momentum factor to seek to reduce the risk of investing in a sector that may appear undervalued, but which may have also had recent relative price underperformance due to fundamental issues with the sector that may negatively affect the sector's long-term total return.

The classic CAPE® Ratio is used to assess equity market valuations and averages ten years of reported earnings to account for earnings and market cycles. Traditional valuation measures, such as the price-earnings (PE) ratio, by contrast, typically rely on earnings information from only the past year. The Index uses a modified version of the classic CAPE® Ratio to standardize the comparison across sectors. There can be no assurance that the Index will provide a better measure of value than more traditional measures, over any period or over the long term.

Through the Index, the Fund will have focused exposures to the sectors making up the Index. As a result, the Fund's net asset value may be affected to a greater degree by factors affecting those sectors or industries than a fund that invests more broadly.

Under normal circumstances, to the extent use of the above-described derivatives strategy leaves a substantial portion of the Fund's assets available for other investment by the Fund, the Fund intends to invest those assets in a portfolio of debt instruments managed by the Sub-Adviser to seek to provide additional long-term total return. The Fund may invest directly in debt instruments; alternatively, the Sub-Adviser may choose to invest all or a portion of the Fund's assets in one or more fixed-income funds managed by the Sub-Adviser. Debt instruments in which the Fund may invest include, by way of example, (i) securities or other income-producing instruments issued or guaranteed by the U.S. Government, its agencies, instrumentalities or sponsored corporations (including inflation-protected securities); (ii) corporate obligations (including foreign hybrid securities); (iii) mortgage-backed securities

(including commercial and residential mortgage-backed securities) and other asset-backed securities, collateralized mortgage obligations ("CMOs"), government mortgage pass-through securities, multiclass pass-through securities, private mortgage pass-through securities, stripped mortgage securities (e.g., interest-only and principal-only securities), and inverse floaters; (iv) collateralized debt obligations ("CDOs"), including collateralized loan obligations ("CLOs"); (v) foreign securities (corporate and government), including emerging market securities; (vi) bank loans and assignments and other fixed and floating rate loans (including, among others, senior loans, second lien or other subordinated or unsecured fixed or floating rate loans, delayed funding loans and revolving credit facilities); (vii) municipal securities and other debt obligations issued by states, local governments, and government-sponsored entities, including their agencies, authorities, and instrumentalities; (viii) inflation-indexed bonds; (ix) convertible securities; (x) preferred securities; (xi) Real Estate Investment Trust ("REIT") securities; (xii) distressed and defaulted securities; (xiii) payment-in-kind bonds; (xiv) zero-coupon bonds; (xv) custodial receipts, cash and cash equivalents; (xvi) short-term, high quality investments, including, for example, commercial paper, bankers' acceptances, certificates of deposit, bank time deposits, repurchase agreements, and investments in money market mutual funds or similar pooled investments; and (xvii) other instruments bearing fixed, floating, or variable interest rates of any maturity. The Fund may invest in any level of the capital structure of an issuer of mortgage-backed or asset-backed securities, including the equity or "first loss" tranche.

The Sub-Adviser may invest Fund assets in other funds managed by the Sub-Adviser from time to time in order to obtain the Fund's desired investment exposure. Investing in other funds managed by the Sub-Adviser involves potential conflicts of interest. For example, the Sub-Adviser or its affiliates may receive fees based on the amount of assets invested in such other investment vehicles. This and other factors may give the Sub-Adviser an economic or other incentive to make or retain an investment for the Fund in an affiliated investment vehicle in lieu of other investments that may also be appropriate for the Fund. To reduce this potential conflict of interest, the Sub-Adviser has agreed to reduce its advisory fee to the extent of advisory fees paid to the Sub-Adviser or its affiliates by other investment vehicles in respect of assets of the Fund invested in those vehicles.

The Fund's portfolio of debt instruments will normally have an overall weighted average effective duration of not less than one year or more than eight years. Duration is a measure of the expected life of a fixed-income instrument that is used to determine the sensitivity of a security's price to changes in interest rates. Effective duration is a measure of the Fund's portfolio duration adjusted for the anticipated effect of interest rate changes on bond and mortgage pre-payment rates. The longer a portfolio's effective duration, the more sensitive it will be to changes in interest rates. The effective duration of the Fund's portfolio of debt instruments may vary materially from its target range, from time to time, and there is no assurance that the effective duration of the portfolio will always be within its target range.

The Fund may invest in debt instruments of any credit quality, including those that are at the time of investment unrated or rated BB+ or lower by S&P or Ba1 or lower by Moody's or the equivalent by any other nationally recognized statistical rating organization. Corporate bonds and certain other fixed-income instruments rated below investment grade, or such instruments that are unrated and determined by the Sub-Adviser to be of comparable quality, are high yield, high risk bonds, commonly known as junk bonds. Generally, lower-rated debt securities offer a higher yield than higher-rated debt securities of similar maturity but are subject to greater risk of loss of principal and interest than higher-rated securities of similar maturity. The Fund may invest up to 33 1/3% of its net assets in junk bonds, bank loans and assignments rated below investment grade or unrated but determined by the Sub-Adviser to be of comparable quality, and credit default swaps of companies in the high yield universe. The Sub-Adviser does not consider the term "junk bonds" to include any mortgage-backed securities or any other asset-backed securities, regardless of their credit rating or credit quality.

The Fund may invest up to 5% of its net assets in defaulted corporate securities. Repayment of defaulted securities and obligations of distressed issuers (including insolvent issuers or issuers in payment or covenant default, in workout or restructuring or in bankruptcy or in solvency proceedings) is subject to significant uncertainties.

The Fund may invest a portion of its net assets in inverse floater securities and interest-only and principal-only securities. An inverse floater is a type of instrument, which may be backed by or related to a mortgage-backed security, that bears a floating or variable interest rate that moves in the opposite direction to movements in interest rates generally or the interest rate on another security or index. Interest-only and principal-only securities may also be backed by or related to a mortgage-backed security. As a result, they are highly sensitive to actual or anticipated changes in prepayment rates on the underlying securities.

The Fund may invest a portion of its net assets in debt instruments (including hybrid securities) issued or guaranteed by companies, financial institutions and government entities in emerging market countries. An "emerging market country" is a country that, at the time the Fund invests in the related fixed-income instruments, is classified as an emerging or developing economy by any supranational organization such as the United Nations, or related entities, or is considered an emerging market country for purposes of constructing a major emerging market securities index.

The Fund may invest in other investment companies, including, for example, other open-end or closed-end investment companies, ETFs, and domestic or foreign private investment vehicles, including investment companies sponsored or managed by the Sub-Adviser and its affiliates. The Fund may engage in short sales, either to earn additional return or to hedge existing investments.

In managing the Fund's debt instruments, under normal market conditions, the Sub-Adviser uses a controlled risk approach. The techniques of this approach attempt to control the principal risk components of the fixed-income markets and may include consideration of:

- security selection within a given sector;
- relative performance of the various market sectors;
- the shape of the yield curve; and
- fluctuations in the overall level of interest rates.

The Sub-Adviser also utilizes active asset allocation and monitors the duration of the Fund's fixed-income securities to seek to mitigate the Fund's exposure to interest rate risk.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Asset-based securities risk Asset-based securities are typically fixed-income securities whose value is related to the market price of certain commodities, interests, and other items, such as precious metals, as well as other assets, such as credit card receivables. Although the market price of these securities is expected to follow the market price of the related assets, there may not be perfect correlation. There are special risks associated with certain types of assets that will also affect the value of asset-based securities related to those assets. For an example of such special risks, please refer to "Precious metals related securities risk."
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Corporate loan, sovereign entity loan, and bank loan risk Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed,

and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Extension risk When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- Forward foreign currency exchange contracts risk Forward foreign currency exchange contracts do not eliminate fluctuations in the value of non-U.S. securities but rather allow the Fund to establish a fixed rate of exchange for a future point in time. This strategy can have the effect of reducing returns and minimizing opportunities for gain.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Indexed and inverse securities risk Certain indexed and inverse securities have greater sensitivity to changes in interest rates or index levels than other securities, and the Fund's investment in such instruments may decline significantly in value if interest rates or index levels move in a way the Fund's investment manager does not anticipate.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- Municipal securities risk Municipal securities are subject to certain additional risks. A Fund may be more sensitive to adverse economic, business or political developments if it invests a substantial portion of its assets in the debt securities of projects in the same or similar sectors (e.g., education, health care, housing, transportation, and utilities), industrial development bonds, or in particular types of municipal securities (e.g., general obligation bonds, private activity bonds and moral obligation bonds). Other occurrences, such as catastrophic natural disasters or acts of terrorism, can also adversely affect a state's fiscal stability and affect the value of a Fund's investment in municipal securities. The recent national economic crisis, among other factors, has caused deterioration in the economies of many states, resulting in an adverse impact on states' spending, revenues and state budgets that has caused many states to operate under significant financial stress. Certain states or municipalities may file for, and enter bankruptcy proceedings. Legal and regulatory requirements related to state and municipal bankruptcy are evolving, which could affect the value of a Fund's investment in municipal securities.

- *Portfolio turnover risk* Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Prepayment risk During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- Real estate investment risk Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- Short sales risk A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- Structured investments risk A structured investment is a derivative security designed to offer a return linked to a particular underlying security, currency, commodity or market. Structured investments may come in various forms including notes (such as exchange-traded notes), warrants and options to purchase securities. A Fund will typically use structured investments to gain exposure to a particular underlying security, currency, commodity or market when direct access to the security, currency, commodity, or market is limited or inefficient from a tax or cost standpoint. There can be no assurance that structured investments will trade at the same price or have the same value as the underlying security, currency, commodity or market. Investments in structured investments involve risks including, but not limited to, issuer risk, counterparty risk and market risk. Holders of structured investments bear risks of the underlying investment and are subject to issuer or counterparty risk because a Fund is relying on the creditworthiness of such issuer or counterparty and has no rights with respect to the underlying investment. Certain structured investments may be thinly traded or have a limited trading market and may have the effect of increasing a Fund's illiquidity to the extent that a Fund, at a particular point in time, may be unable to find qualified buyers for these securities.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.
- LIBOR replacement risk In addition to other interbank offered rates, the most common benchmark rate for floating rate securities is London Interbank Offered Rate (LIBOR), which is the rate of interest offered on short-term interbank deposits, as determined by trading between major international banks. The UK Financial Conduct Authority has announced that LIBOR rates will no longer be published after the end of 2021. The elimination of LIBOR may adversely affect the interest rates on, and value

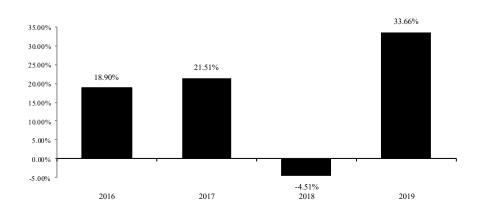

of, certain Fund investments for which the value is tied to LIBOR. Alternatives to LIBOR are established or in development in most major currencies, including the Secured Overnight Financing Rate (SOFR) that is intended to replace U.S. dollar LIBOR. Markets are slowly developing in response to these new reference rates. However, questions around the rate transition's effect on the liquidity of securities and how to appropriately adjust these rates at the time of transition remain undetermined for the Fund. The effects of discontinuation of LIBOR on the Fund will vary, and it is difficult to predict the full impact of the transition away from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new products, instruments and contracts are commercially accepted and market practices become more settled.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/DoubleLine® Total Return Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek to maximize total return.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.42%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.10%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	0.83%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

	JNL/DoubleLine® Total Return Fund Class A			
Ī	1 year	3 years	5 years	10 years
Ī	\$85	\$265	\$460	\$1,025

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	25%

Principal Investment Strategies. Under normal circumstances, the Fund intends to invest more than 50% of its net assets in residential and commercial mortgage-backed securities. These investments may include mortgage-backed securities of any maturity or type, including those guaranteed by, or secured by collateral that is guaranteed by, the United States Government, its agencies, instrumentalities or sponsored corporations, and privately issued mortgage-backed securities rated at the time of investment Aa3 or higher by Moody's Investor Service, Inc. ("Moody's") or AA- or higher by S&P Global Ratings ("S&P") or the equivalent by any other nationally recognized statistical rating organization or in unrated securities that are determined by DoubleLine Capital LP, the Fund's sub-adviser ("Sub-Adviser") to be of comparable quality. These investments also include, among others, government mortgage pass-through securities, collateralized mortgage obligations ("CMOs"), multiclass pass-through securities, private mortgage pass-through securities, stripped mortgage securities (interest-only and principal-only securities) and inverse floaters.

Since the Fund's inception, the Fund has historically invested substantially all of its assets in the mortgage-backed securities described above; short-term investments, such as notes issued by U.S. Government agencies and shares of money market funds; and, from time to time, other asset-backed backed obligations, collateralized loan obligations ("CLOs"), collateralized debt obligations ("CDOs"), and obligations of the U.S. Government and its agencies, instrumentalities, or sponsored corporations. The Fund may invest in other instruments as part of its principal investment strategies, but it has not historically done so and there can be no assurance it will do so in the future.

In managing the Fund's portfolio, the Sub-Adviser typically uses a controlled-risk approach. The techniques of this approach attempt to control the principal risk components of the fixed income markets and may include, among other factors, consideration of the Sub-Adviser's view of the following: the potential relative performance of various market sectors, security selection available within a given sector, the risk/reward equation for different asset classes, liquidity conditions in various market sectors, the shape of the yield curve and projections for changes in the yield curve, potential fluctuations in the overall level of interest rates, and current fiscal policy.

Under normal circumstances, the Fund intends to invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in bonds. Bonds include bonds, debt securities, and other fixed income instruments issued by governmental or private-sector entities.

The Fund may invest in bonds of any credit quality, including those that are at the time of investment unrated or rated BB+ or lower by S&P or Ba1 or lower by Moody's or the equivalent by any other nationally recognized statistical rating organization. Bonds and fixed income instruments rated below investment grade, or such instruments that are unrated and determined by the Sub-Adviser to be of comparable quality, are high yield, high risk bonds, commonly known as junk bonds. The Fund may invest up to 331/3% of its net assets in junk bonds, bank loans and assignments rated below investment grade or unrated but determined by the Sub-Adviser to be of comparable quality, and credit default swaps of companies in the high yield universe. The Sub-Adviser does not consider the term "junk bonds" to include any mortgage-backed securities or any other asset-backed securities, regardless of their credit rating or credit quality. The Fund may invest a portion of its net assets in inverse floater securities and interest-only and principal-only securities.

The Sub-Adviser monitors the duration of the Fund's portfolio securities to seek to assess and, in its discretion, adjust the Fund's exposure to interest rate risk. In managing the Fund's investments, under normal market conditions, the Sub-Adviser intends to seek to construct an investment portfolio with a weighted average effective duration of no less than one year and no more than eight years. Duration is a measure of the expected life of a fixed income instrument that is used to determine the sensitivity of a security's price to changes in interest rates. Effective duration is a measure of the Fund's portfolio duration adjusted for the anticipated effect of interest rate changes on bond and mortgage prepayment rates. The effective duration of the Fund's investment portfolio may vary materially from its target range, from time to time, and there is no assurance that the effective duration of the Fund's investment portfolio will always be within its target range.

Portfolio securities may be sold at any time. By way of example, sales may occur when the Sub-Adviser determines to take advantage of what the Sub-Adviser considers to be a better investment opportunity, when the Sub-Adviser believes the portfolio securities no longer represent relatively attractive investment opportunities, when the Sub-Adviser perceives deterioration in the credit

fundamentals of the issuer, or when the Sub-Adviser believes it would be appropriate to do so in order to readjust the duration of the Fund's investment portfolio.

For example, the value of a portfolio of fixed income securities with an average duration of three years would generally be expected to decline by approximately 3% if interest rates rose by one percentage point.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Asset-based securities risk Asset-based securities are typically fixed-income securities whose value is related to the market price of certain commodities, interests, and other items, such as precious metals, as well as other assets, such as credit card receivables. Although the market price of these securities is expected to follow the market price of the related assets, there may not be perfect correlation. There are special risks associated with certain types of assets that will also affect the value of asset-based securities related to those assets. For an example of such special risks, please refer to "Precious metals related securities risk."
- Collateralized debt obligations risk Collateralized debt obligations (CDOs) are subject to credit, interest rate, valuation, prepayment and extension risks. In addition, CDOs carry additional risks, including but not limited to: (i) the possibility that distributions from the collateral will not be adequate to make interest or other payments; (ii) the risk that the collateral may default or decline in value or be downgraded, if rated by a nationally recognized statistical rating organization; (iii) the Fund may invest in tranches of CDOs that are subordinate to other tranches; (iv) the structure and complexity of the transaction and the legal documents could lead to disputes among investors regarding the characterization of proceeds; (v) the investment returns achieved by the Fund could be significantly different than those predicted by financial models; (vi) the lack of a readily available secondary market for CDOs; (vii) risk of a forced "fire sale" liquidation due to technical defaults such as coverage test failures; and (viii) the CDO's manager may perform poorly.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Extension risk When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Fund's Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- Prepayment risk During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- Real estate investment risk Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of

mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.

- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.

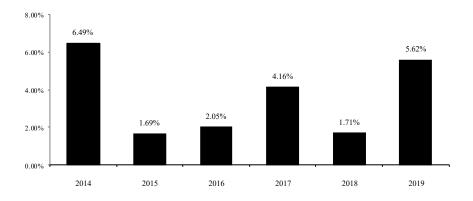

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect the expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/DoubleLine(R) Total Return Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Annual Total Returns as of December 31

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Fidelity Institutional Asset Management® Total Bond Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek a high level of current income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.39%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.10%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses ³	0.80%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense information has been restated to reflect current fees.

JNL/Fidelity Institutional Asset Management® Total Bond Fund Class A			
1 year	3 years	5 years	10 years
\$82	\$255	\$444	\$990

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	364%

Portfolio turnover for the period of January 1, 2019 to June 23, 2019 is from the prior sub-adviser, Goldman Sachs Asset Management, L.P.

Principal Investment Strategies. The Fund invests, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in debt securities of all types and repurchase agreements for those securities. The Fund may invest up to 20% of its assets in lower-quality debt securities (those of less than investment-grade quality, also referred to as "high yield debt securities" or "junk bonds").

FIAM LLC, the Fund's sub-adviser ("Sub-Adviser"), uses the Bloomberg Barclays U.S. Aggregate Bond Index (the "Index") as a guide in allocating the Fund's assets across the investment-grade, high yield, and emerging market asset classes. The Sub-Adviser manages the Fund to have similar overall interest rate risk to the Index.

The Sub-Adviser may invest the Fund's assets in securities of foreign issuers in addition to securities of domestic issuers.

The Sub-Adviser allocates the Fund's assets among different asset classes, different market sectors (for example, corporate, asset-backed, or government securities), and different maturities based on the Sub-Adviser's view of the relative value of each sector or maturity.

The Sub-Adviser analyzes the credit quality of the issuer, the issuer's potential for success, the credit, currency, and economic risks of the security and its issuer, security-specific features, current and potential future valuation, and trading opportunities to select investments.

The Sub-Adviser may engage in transactions that have a leveraging effect on the Fund, including investments in derivatives, regardless of whether the Fund may own the asset, instrument, currency, or components of the index underlying the derivative, and forward-settling securities. The Sub-Adviser may invest a significant portion of the Fund's assets in these types of investments. The Fund's derivative investments may include interest rate swaps, total return swaps, credit default swaps, options (including options on futures and swaps), forwards, and futures contracts (both long and short positions) on securities, other instruments, indexes, or currencies. Depending on the Sub-Adviser's outlook and market conditions, the Sub-Adviser may engage in these transactions to increase or decrease the Fund's exposure to changing security prices, interest rates, credit qualities, foreign exchange rates, or other factors that affect security values, or to gain or reduce exposure to an asset, instrument, currency, or index.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.

- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Prepayment risk During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Reverse repurchase agreements risk Reverse repurchase agreements involve the sale of securities held by the Fund with an agreement to repurchase the securities at an agreed-upon price, date and interest payment. Reverse repurchase agreements involve the risk that the other party may fail to return the securities in a timely manner or at all. The Fund could lose money if the value of collateral held by the Fund, including the value of the investments made with the cash received from the sale of securities, is less than the value of the securities sold by the Fund. These events could also trigger adverse tax consequences to the Fund.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Swaps risk Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject

to the general risks relating to derivatives described herein. The Dodd–Frank Act mandates a new regulatory framework for trading swaps in the United States. Standardized swaps will be required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The regulations to implement the Dodd-Frank Act are still being developed so there may be further changes to the system intended to safeguard the collateral of parties to swaps.

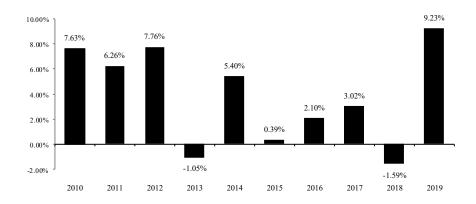

- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Options risk If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. Performance prior to June 24, 2019 reflects the Fund's results when managed by the former sub-adviser, Goldman Sachs Asset Management, L.P. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts.

You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/First State Global Infrastructure Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek total return through growth of capital and inflation-protected income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.69%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Total Annual Fund Operating Expenses	1.15%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/First State Global Infrastructure Fund Class A					
1 year 3 years 5 years 10 years					
\$117 \$365 \$633 \$1,398					

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	49%

Principal Investment Strategies. The Fund, under normal market conditions, invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in publicly traded equity securities of infrastructure companies. The Fund will typically invest in U.S. and non-U.S. (foreign markets), which may include developing and emerging market countries.

The Fund defines non-U.S. companies as companies (i) that are organized under the laws of a foreign country; (ii) whose principal trading market is in a foreign country; or (iii) that have a majority of their assets, or that derive a significant portion of their revenue or profits from businesses, investments or sales, outside of the United States. Under normal market conditions, the Fund invests significantly (ordinarily at least 40% — unless market conditions are not deemed favorable by the Fund's sub-adviser, in which case the Fund would invest at least 30%) in non-U.S. infrastructure companies.

The Fund defines an infrastructure company as one that exhibits the characteristics of high barriers to entry, strong pricing power, predictable cash flows and sustainable growth. The Fund defines infrastructure assets, among other things, as the physical structures, networks and systems of transportation, energy, water, waste, and communication. Given the evolving nature of the global listed infrastructure market, the Fund may hold securities outside of the above sectors as long as they meet the Fund's definition of an infrastructure company.

The equity securities in which the Fund may invest include, but are not limited to, common and preferred stock of companies of any size market capitalizations. The foreign securities in which the Fund may invest include, but not limited to, depositary receipts, such as American Depositary Receipts ("ADRs"), European Depositary Receipts ("EDRs") and Global Depositary Receipts ("GDRs"). The Fund may also invest in initial public offerings ("IPOs").

The Fund may invest without limit in stapled securities to gain exposure to infrastructure companies in Australia. The value of stapled securities and the income derived from them may fall as well as rise. Stapled securities are not obligations of, deposits in, or guaranteed by, the Fund.

The Fund may invest in real estate investment trusts ("REITs") and limited partnerships and master limited partnerships ("MLPs") listed on a domestic or foreign exchange that meet the Fund's definition of an infrastructure company.

The Fund may invest in Rule 144A and Regulation S securities. Rule 144A securities are securities offered as exempt from registration with the Securities and Exchange Commission ("SEC") but are typically treated as liquid securities because there is a market for such securities. Regulation S securities are securities of U.S. and non-U.S. issuers that are issued through private offerings without registration with the SEC pursuant to Regulation S under the Securities Act of 1933, as amended.

The Fund's investment strategy is based on active, bottom-up stock selection which seeks to identify mispricing. The strategy seeks to minimize risk through on-the-ground research, a focus on quality, and sensible portfolio construction.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

• Infrastructure companies risk – Infrastructure companies may be subject to a variety of factors that may adversely affect their business or operations, including high interest costs in connection with capital construction programs, high leverage, costs associated with environmental and other regulations, the effects of economic slowdown, surplus capacity, increased competition from other providers of services, uncertainties concerning the availability of fuel at reasonable prices, the effects of energy conservation policies and other factors. Some of the specific risks that infrastructure companies may be particularly affected by, or subject to, include the following: regulatory risk, technology risk, regional or geographic risk, natural disasters risk, throughput risk, project risk, strategic asset risk, operation risk, customer risk, interest rate risk, inflation risk and financing risk.

In particular, the operations of infrastructure projects are exposed to unplanned interruptions caused by significant catastrophic events, such as cyclones, earthquakes, landslides, floods, explosion, fire, terrorist attack, major plant breakdown, pipeline or

electricity line rupture or other disasters. Operational disruption, as well as supply disruption, could adversely impact the cash flows available from these assets.

Further, national and local environmental laws and regulations affect the operations of infrastructure projects. Standards are set by these laws, and regulations are imposed regarding certain aspects of health and environmental quality, and they provide for penalties and other liabilities for the violation of such standards, and establish, in certain circumstances, obligations to remediate and rehabilitate current and former facilities and locations where operations are, or were, conducted. These laws and regulations may have a detrimental impact on the financial performance of infrastructure projects.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign

markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Stapled securities risk A stapled security is comprised of two different securities—a unit of a trust and a share of a company—that are "stapled" together and treated as a unit at all times, including for transfer or trading. The characteristics and value of a stapled security are influenced by both underlying securities. Stapled securities are not obligations of, deposits in, or guaranteed by, the Fund. The listing of stapled securities on a domestic or foreign exchange does not guarantee a liquid market for stapled securities.
- Master limited partnership risk An investment in MLP units involves some risks that differ from an investment in the common stock of a corporation. Holders of MLP units have limited control on matters affecting the partnership. Investing in MLPs involves certain risks related to investing in the underlying assets of the MLPs and risks associated with pooled investment vehicles. MLPs holding credit-related investments are subject to interest rate risk and the risk of default on payment obligations by debt issuers. MLPs that concentrate in a particular industry or a particular geographic region are subject to risks associated with such industry or region. The benefit derived from the Fund's investment in MLPs is largely dependent on the MLPs being treated as partnerships for federal income tax purposes. Certain MLPs may be illiquid securities.
- Regulation S securities risk Regulation S securities may be less liquid than publicly traded securities and may not be subject to the disclosure and other investor protection requirements that would be applicable if they were publicly traded. Accordingly, Regulation S securities may involve a high degree of business and financial risk and may result in substantial losses.
- Rule 144A securities risk Rule 144A securities are securities offered as exempt from registration with the SEC, but may be treated as liquid securities because there is a market for such securities. Rule 144A securities may have an active trading market, but carry the risk that the active trading market may not continue. To the extent that institutional buyers become, for a time, uninterested in purchasing Rule 144A securities, investing in such securities could increase the Fund's level of illiquidity.
- Investments in IPOs risk IPOs issued by unseasoned companies with little or no operating history are risky and highly volatile.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *Natural resource related securities risk* Because the Fund concentrates its investments in natural resource related securities, the Fund is subject to the risks associated with natural resource investments in addition to the general risk of the stock market. This

means the Fund is more vulnerable to the price movements of natural resources and factors that particularly affect the oil, gas, mining, energy, chemicals, paper, steel or agriculture sectors than a more broadly diversified fund. Because the Fund invests primarily in companies with natural resource assets, there is the risk that the Fund will perform poorly during a downturn in natural resource prices.

- Real estate investment risk Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- *Preferred stock risk* Preferred stock represents an equity interest in a company that generally entitles the holder to receive, in preference to the holders of other stocks such as common stocks, dividends and a fixed share of the proceeds resulting from a liquidation of the company.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.

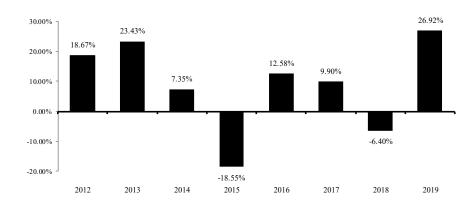

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to August 13, 2018 reflects the Fund's results when managed by the former sub-adviser, Brookfield Investment Management, Inc. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective December 31, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the S&P Global Infrastructure Index with the S&P Global Infrastructure Index (Net) as the Fund's primary benchmark.

Annual Total Returns as of December 31

Class A

Best Quarter (ended 3/31/2019): 14.17%; Worst Quarter (ended 9/30/2015): -10.86%

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Franklin Templeton Global Multisector Bond Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek total investment return consisting of a combination of interest income, capital appreciation, and currency gains.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses			
(Expenses that you pay each year as a percentage of the value of your investment)			
	Class A		
Management Fee	0.57%		
Distribution and/or Service (12b-1) Fees	0.30%		
Other Expenses ¹	0.15%		
Acquired Fund Fees and Expenses ²	0.03%		
Total Annual Fund Operating Expenses	1.05%		

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/Franklin Templeton Global Multisector Bond Fund Class A					
	1 year 3 years 5 years 10 years				
ľ	\$107 \$334 \$579 \$1,283				

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	45%

Principal Investment Strategies. Under normal market conditions, the Fund will invest at least 80% of its assets (net assets plus amount of any borrowings made for investment purposes) in fixed and floating rate debt securities and debt obligations (including convertible bonds) of governments, government agencies and government-related or corporate issuers located anywhere in the world, including developing markets (collectively, "bonds"). Bonds include debt securities of any maturity, such as bonds, notes, bills and debentures, and may be denominated and issued in the local currency or in another currency. The Fund may also invest in inflation-indexed securities and securities or structured products that are linked to or derive their value from another security, asset or currency of any nation. In addition, the Fund's assets will be invested in issuers located in at least three countries (including the U.S.); the Fund's investments will generally be invested outside the United States. Under normal market conditions, the Fund expects to invest at least 40% of its net assets in foreign securities.

The Fund may buy bonds rated in any category, including securities in default. The Fund may invest in debt securities of any maturity or duration, and the average maturity of debt securities in the Fund's portfolio will fluctuate depending on the Sub-Adviser's outlook on changing market, economic, and political conditions.

The Fund may invest in fixed-income securities of any credit quality, including below investment grade or high-yield securities (sometimes referred to as "junk bonds"), and may buy bonds that are in default.

For purposes of satisfying the 80% requirement, the Fund may also invest in derivative instruments that have economic characteristics similar to the fixed-income instruments mentioned above. "Fixed-income Instruments" include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities.

For purposes of pursuing its investment goals, the Fund regularly enters into various currency related transactions involving derivative instruments, principally currency and cross currency forwards but may also use currency and currency index futures contracts. The Fund maintains significant positions in currency related derivative instruments as a hedging technique or to implement a currency investment strategy, which could expose a large amount of the Fund's assets to obligations under these instruments. The result of such transactions may represent, from time to time, a large component of the Fund's investment returns. The use of derivative transactions may allow the fund to obtain net long or net negative (short) exposure to selected currencies. The Fund may also enter into various other transactions involving derivatives, including interest/bond futures and interest rate swap agreements (which may include interest rate and credit default swaps). These derivative instruments may be used for hedging purposes, to enhance returns, or to obtain net long or net negative (short) exposure to selected currencies, interest rates, countries, durations, or credit risks.

Franklin Advisers, Inc. ("Sub-Adviser") allocates the Fund's assets based upon its assessment of changing market, political and economic conditions. It will consider various factors, including evaluation of interest and currency exchange rate changes and credit risks. The Sub-Adviser may consider selling a security when it believes the security has become fully valued due to either its price appreciation or changes in the issuer's fundamentals, or when the Sub-Adviser believes another security is a more attractive investment opportunity.

The Fund may, at times, maintain a large position in cash and cash equivalents (including money market funds).

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

• Fixed-income risk – The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and

other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.

- Sovereign debt risk Investments issued by a governmental entity are subject to the risk that the governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt due to, among other things, cash flow problems, insufficient foreign currency reserves, political considerations, the relative size of the governmental entity's debt position in relation to the economy or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies. If a governmental entity defaults, it may ask for more time in which to pay its debt, request additional loans or otherwise restructure its debt. There is no legal process for collecting sovereign debt that a government does not pay nor are there bankruptcy proceedings through which all or part of the sovereign debt may be collected.
- *Income risk* The Fund is subject to the risk that the income generated from the Fund's investments may decline in the event of falling interest rates. Income risk may be high if the Fund's income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund's distributions to shareholders may decline when interest rates fall.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Currency management strategies risk Currency management strategies may substantially change the Fund's exposure to currency exchange rates and could result in losses to the Fund if currencies do not perform as the investment manager expects. In addition, currency management strategies, to the extent that they reduce the Fund's exposure to currency risks, may also reduce the Fund's ability to benefit from favorable changes in currency exchange rates. Using currency management strategies for purposes other than hedging further increases the Fund's exposure to foreign investment losses. Currency markets generally are not as regulated as securities markets. In addition, currency rates may fluctuate significantly over short periods of time, and can reduce returns.
- Corporate loan, sovereign entity loan, and bank loan risk Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed,

and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Non-hedging foreign currency trading risk The Fund may engage in forward foreign currency transactions for speculative purposes. The Fund's investment manager may purchase or sell foreign currencies through the use of forward contracts based on the investment manager's judgment regarding the direction of the market for a particular foreign currency or currencies. In pursuing this strategy, the investment manager seeks to profit from anticipated movements in currency rates by establishing "long" and/or "short" positions in forward contracts on various foreign currencies. Foreign exchange rates can be extremely volatile and a variance in the degree of volatility of the market or in the direction of the market from the Sub-Adviser's expectations may produce significant losses to the Fund. Some of these transactions may also be subject to interest rate risk.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- China and India country specific risks Investments in equity and equity-related securities in the Greater China region and India will expose the Fund to that country's market, currency, and other risks, including volatility and structural risks. As a result, investments in the Greater China region and India may be volatile.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Debt securities ratings risk The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- Inflation-indexed securities risk Inflation-indexed securities have a tendency to react to changes in real interest rates. Real interest rates represent nominal (stated) interest rates lowered by the anticipated effect of inflation. In general, the price of an inflation-indexed security can decrease when real interest rates increase, and can increase when real interest rates decrease. Interest payments on inflation-indexed securities will fluctuate as the principal and/or interest is adjusted for inflation and can be unpredictable. In periods of deflation, the Fund may not receive any income from such investments. In certain interest rate

- environments, such as when real interest rates are rising faster than normal interest rates, inflation-indexed securities may experience greater losses than other fixed-income securities with similar durations.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Swaps risk Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject to the general risks relating to derivatives described herein. The Dodd–Frank Act mandates a new regulatory framework for trading swaps in the United States. Standardized swaps will be required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The regulations to implement the Dodd-Frank Act are still being developed so there may be further changes to the system intended to safeguard the collateral of parties to swaps.
- Foreign exchange and currency derivatives trading risk The Fund intends to actively trade in spot and forward currency positions and related currency derivatives in order to increase the value of the Fund. The trading of foreign currencies directly generates risks separate from those associated with inactive or indirect exposures to non-U.S. dollar denominated instruments and currency derivative instruments. Specifically, the Fund may directly take a loss from the buying and selling of currencies without any related exposure to non-U.S. dollar-denominated assets.
- Forward foreign currency exchange contracts risk Forward foreign currency exchange contracts do not eliminate fluctuations in the value of non-U.S. securities but rather allow the Fund to establish a fixed rate of exchange for a future point in time. This strategy can have the effect of reducing returns and minimizing opportunities for gain.
- Hedging instruments risk The Fund may attempt, from time to time, to hedge (protect) against currency risks, largely using forward foreign currency exchange contracts, where available and when, in the Sub-Adviser's opinion, it would be advantageous to the Fund. A forward foreign currency exchange contract is an agreement to buy or sell a specific currency at a future date and at a price set at the time of the contract. Forward foreign currency exchange contracts may reduce the risk of loss from a change in value of a currency, but they also limit any potential gains and do not protect against fluctuations in the value of the underlying position. For example, during periods when the U.S. dollar weakens in relation to a foreign currency, the Fund's use of a currency hedging program will result in lower returns than if no currency hedging programs were in effect. Forward foreign currency exchange contracts and put options are considered derivative investments, because their value and performance depend, at least in part, on the value and performance of an underlying asset. The Fund may also use futures, swaps, and other derivative instruments to hedge risk. The Fund's investment in derivatives may involve a small investment relative to the amount of risk assumed. To the extent the Fund enters into these transactions, its success will depend on the Sub-Adviser's ability to predict market movements, and their use may have the opposite effect of that intended. Risks include potential loss due to the imposition of controls by a government on the exchange of foreign currencies, the loss of any premium paid to enter into the transaction, delivery failure, default by any other party, or inability to close out a position because the trading market becomes illiquid. In addition, for certain reasons, the Fund may not seek to establish a perfect correlation between such hedging instruments and the portfolio instruments being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. It is not possible to hedge fully or perfectly against any risk.
- Currency transaction risk Non-U.S. currency forward contracts, options, swaps, or other derivatives contracts on non-U.S. currencies involve a risk of loss if currency exchange rates move against the Fund. Forward contracts may not be guaranteed by an exchange or clearinghouse and a default by the counterparty may result in a loss to the Fund. Governmental authorities may impose credit controls to limit the level of forward trading to the detriment of the Fund. Neither the U.S. Commodities Future Trading Commission nor the U.S. banking authorities regulate forward currency transactions through banks. In respect of such trading, the Fund is subject to the risk of bank failure or the inability of or refusal by a bank to perform with respect to such contracts.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment

opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.

- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- Government regulatory risk Certain industries or sectors, including, but not limited to, real estate, financial services, utilities, oil and natural gas exploration and production, and health care are subject to increased regulatory requirements. There can be no guarantee that companies in which the Fund invests will meet all applicable regulatory requirements. Certain companies could incur substantial fines and penalties for failing to meet government regulatory requirements. These requirements may also result in additional compliance expenses and costs. Such increased regulatory compliance costs could hurt a company's performance.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Investment in money market funds risk Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. An investment in a money market fund is not insured or guaranteed by a Federal Deposit Insurance Corporation or any other government agency. Although such funds seek to maintain a net asset value of \$1.00 per share, it is possible to lose money by investing in a money market fund.
- LIBOR replacement risk In addition to other interbank offered rates, the most common benchmark rate for floating rate securities is London Interbank Offered Rate (LIBOR), which is the rate of interest offered on short-term interbank deposits, as determined by trading between major international banks. The UK Financial Conduct Authority has announced that LIBOR rates will no longer be published after the end of 2021. The elimination of LIBOR may adversely affect the interest rates on, and value of, certain Fund investments for which the value is tied to LIBOR. Alternatives to LIBOR are established or in development in most major currencies, including the Secured Overnight Financing Rate (SOFR) that is intended to replace U.S. dollar LIBOR. Markets are slowly developing in response to these new reference rates. However, questions around the rate transition's effect on the liquidity of securities and how to appropriately adjust these rates at the time of transition remain undetermined for the Fund. The effects of discontinuation of LIBOR on the Fund will vary, and it is difficult to predict the full impact of the transition away from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new products, instruments and contracts are commercially accepted and market practices become more settled.

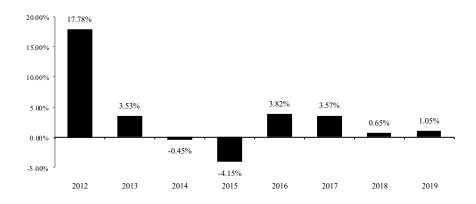

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 27, 2020, the Fund will be combined with JNL/Eaton Vance Global Macro Absolute Return Advantage Fund (the "Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Franklin Templeton Growth Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term total return that is consistent with an acceptable level of risk.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses			
(Expenses that you pay each year as a percentage of the value of your investment)			
	Class A		
Management Fee	0.55%		
Distribution and/or Service (12b-1) Fees	0.30%		
Other Expenses ¹	0.16%		
Acquired Fund Fees and Expenses ²	0.05%		
Total Annual Fund Operating Expenses ³	1.06%		
Less Waiver/Reimbursement ⁴	0.01%		
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	1.05%		

- ¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.
- ³ Expense information has been restated to reflect current fees.
- ⁴ JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Franklin Templeton Growth Allocation Fund Class A					
1 year 3 years 5 years 10 years					
\$107 \$336 \$584 \$1,293					

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	109%

Portfolio turnover for the period of January 1, 2019 to June 23, 2019 is for the Fund when operating under its former investment strategy and name, JNL/Franklin Templeton Founding Strategy Fund.

Principal Investment Strategies. The Fund has significant flexibility to invest in a broad range of equity, fixed income, and alternative asset classes in the U.S. and other markets throughout the world, both developed and emerging and less developed countries.

Under normal market conditions, Franklin Advisers, Inc., the Fund's sub-adviser (the "Sub-Adviser"), uses a flexible allocation approach when allocating the Fund's assets among the broad asset classes of equity and fixed-income investments.

When selecting equity investments, the Sub-Adviser considers foreign and domestic exposure, market capitalization ranges, and investment style (growth vs. value).

When selecting fixed-income investments, the Sub-Adviser focuses primarily on maximizing income appropriate to the Fund's risk profile and considers the duration and maturity of its investments. The Fund may also invest in fixed income securities of any credit rating, including below investment grade or "junk" bonds.

In determining an optimal mix of the equity and fixed income asset classes for the Fund, the Sub-Adviser assesses changing economic, market and industry conditions. The Sub-Adviser allocates among strategies using a top-down approach, taking into account market conditions, risk factors, diversification, liquidity, transparency and other investment options, among other things.

As part of these equity and fixed-income investments, the Sub-Adviser may invest up to 10% of the Fund's assets in mutual funds or exchange-traded funds ("ETFs"), including those advised by the Sub-Adviser or its affiliates. Such mutual funds or ETFs may invest in a variety of U.S. and foreign equity and fixed income securities of any rating that may employ a growth or value investment style.

The Fund may also invest in derivative instruments. The Fund regularly uses currency derivatives, including forward foreign currency exchange contracts, currency futures contracts, currency swaps and currency options to hedge (protect) against currency risks. The Fund also may, from time to time, use a variety of equity-related derivatives, which may include purchasing or selling call and put options on equity securities and equity security indices, futures on equity securities and equity indexes and options on equity index futures, for various purposes including enhancing Fund returns, increasing liquidity, gaining exposure to particular instruments in more efficient or less expensive ways and/or hedging risks relating to changes in certain equity markets. In addition, the Fund may, from time to time, use interest rate derivatives, including interest rate swaps and interest rate/bond futures contracts for various purposes including enhancing Fund returns, increasing liquidity, gaining exposure to particular instruments in more efficient or less expensive ways and/or hedging risks relating to changes in interest rates. The use of such derivative transactions may allow the Fund to obtain net long or net short exposures to selected markets, interest rates, countries, currencies or durations.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Managed portfolio risk* As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged

and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.

- *Mid-capitalization and small-capitalization investing risk* The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to June 24, 2019 reflects the Fund's results when the Fund did not have a sub-adviser and operated as a fund-of-funds. Effective June 24, 2019, the Fund is sub-advised and no longer operates as a fund-of-funds. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

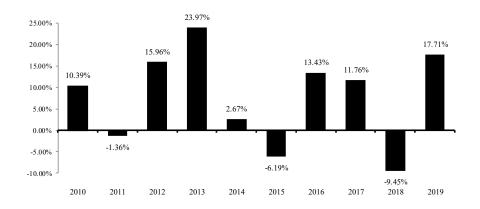

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund's primary benchmark, Dow Jones Moderately Aggressive Index, was replaced with the Morningstar Moderately Aggressive Target Risk Index.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund's secondary benchmark, 80% MSCI All Country World Index (Net), 20% Bloomberg Barclays U.S. Aggregate Bond Index, was replaced with the 50% S&P 500 Index, 25% MSCI All Country World ex USA Index (Net), 25% Bloomberg Barclays U.S. Aggregate Bond Index.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

Summary Prospectus – April 27, 2020

JNL/Franklin Templeton Income Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to maximize income while maintaining prospects for capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.52%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.11%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	0.94%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

l	JNL/Franklin Templeton Income Fund Class A			
	1 year	3 years	5 years	10 years
	\$96	\$300	\$520	\$1,155

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	29%

Principal Investment Strategies. Under normal market conditions, the Fund invests in a diversified portfolio of debt and equity securities. The Fund has significant ability to invest in a broad range of investments and may shift its investments from one asset class to another based on the Sub-Adviser's analysis of the best opportunities for the Fund's portfolio in a given market. The equity securities in which the Fund invests consist primarily of common stock, including those with dividend yields the Sub-Adviser believes are attractive. Debt securities include all varieties of fixed, floating and variable rate instruments, including secured and unsecured bonds, bonds convertible into common stock, senior floating rate and term loans, mortgage-backed securities and other asset-backed securities, debentures, and shorter term instruments. Bond investments may include U.S. and foreign corporate debt, U.S. Treasuries and foreign government bonds. The Fund may invest up to 100% of its total assets in debt securities that are rated below investment grade (also known as "junk bonds"), including a portion in defaulted securities. The Fund maintains the flexibility to invest in securities of companies from a variety of sectors, but from time to time, based on economic conditions, the Fund may have significant investments in particular sectors. The Fund may also invest up to 25% of its assets in foreign securities, either directly or through depositary receipts. The Fund may lend its securities to increase its income.

The Fund's Sub-Adviser searches for undervalued or out-of-favor securities it believes offer opportunities for income today and significant growth tomorrow. It generally performs independent analysis of the debt securities being considered for the Fund's portfolio, rather than relying principally on the ratings assigned by rating organizations. In analyzing both debt and equity securities, the Sub-Adviser considers a variety of factors.

The Fund may invest up to 15% of its net assets in equity-linked notes, including up to 2% of the Fund's net assets in equity-linked notes on commodity-linked exchange-traded funds ("ETFs"). Equity-linked notes are hybrid derivative-type instruments that are specially designed to combine the characteristics of one or more reference securities (usually a single stock, a stock index or a basket of stocks (underlying securities)) and a related equity derivative, such as a put or call option, in a single note form. The Fund may also buy and sell ETFs and options on ETFs.

When choosing equity investments for the Fund, the Sub-Adviser applies a "bottom-up," value oriented, long-term approach, focusing on the market price of a company's securities relative to the Sub-Adviser's evaluation of the company's long-term earnings, asset value and cash flow potential. The Sub-Adviser also considers a company's price/earnings ratio, profit margins and liquidity value.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and

other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Income risk* The Fund is subject to the risk that the income generated from the Fund's investments may decline in the event of falling interest rates. Income risk may be high if the Fund's income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund's distributions to shareholders may decline when interest rates fall.
- Debt securities ratings risk The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- Convertible securities risk Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- Equity-linked notes (ELNs) risk Investing in investment funds may be more costly to the Fund than if the Fund had invested in the underlying securities directly. ELNs may not perform as expected and could cause the Fund to realize significant losses including its entire principal investment. Other risks include counterparty risk, liquidity risk and imperfect correlation between ELNs and the underlying securities.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more

susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.

- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Corporate loan, sovereign entity loan, and bank loan risk Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank

Offered Rate ("LIBOR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- LIBOR replacement risk In addition to other interbank offered rates, the most common benchmark rate for floating rate securities is London Interbank Offered Rate (LIBOR), which is the rate of interest offered on short-term interbank deposits, as determined by trading between major international banks. The UK Financial Conduct Authority has announced that LIBOR rates will no longer be published after the end of 2021. The elimination of LIBOR may adversely affect the interest rates on, and value of, certain Fund investments for which the value is tied to LIBOR. Alternatives to LIBOR are established or in development in most major currencies, including the Secured Overnight Financing Rate (SOFR) that is intended to replace U.S. dollar LIBOR. Markets are slowly developing in response to these new reference rates. However, questions around the rate transition's effect on the liquidity of securities and how to appropriately adjust these rates at the time of transition remain undetermined for the Fund. The effects of discontinuation of LIBOR on the Fund will vary, and it is difficult to predict the full impact of the transition away from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new products, instruments and contracts are commercially accepted and market practices become more settled.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the 50% S&P 500 Value Index, 50% ICE Bank of America Merrill Lynch U.S. High Yield Master II Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

Summary Prospectus – April 27, 2020

JNL/Franklin Templeton International Small Cap Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.79%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	1.26%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

	JNL/Franklin Templeton International Small Cap Fund Class A			
	1 year	3 years	5 years	10 years
Γ	\$128	\$400	\$692	\$1,523

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	26%

Principal Investment Strategies. Under normal market conditions, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in investments of smaller companies located outside the U.S., including those of emerging or developing markets. For this Fund, smaller companies are defined as those that, at the time of purchase of the investment, have market capitalizations that do not exceed the greater of (i) \$5 billion or the equivalent in local currencies or (ii) the highest market capitalization in the Morgan Stanley Capital International (MSCI) Europe, Australasia, Far East (EAFE) Small Cap Index or the All Country World ex US (ACWIXUS) Small Cap Index.

The Fund, from time to time, may have significant investments in a particular sector or country.

The Fund may invest up to 10% of its net assets in securities of companies that operate as real estate investment trusts ("REITs") and similar REIT-like entities domiciled outside the U.S.

The Fund also invests in depositary receipts. Depositary receipts are certificates typically issued by a bank or trust company that give their holders the right to receive securities issued by a foreign or domestic company.

The Fund may also invest a portion of its assets in equity securities of larger foreign companies. The Fund may invest more than 25% of its assets in the securities of issuers located in any one country.

In choosing individual equity investments, the Fund's Sub-Advisers utilize a fundamental "bottom-up" approach involving in-depth proprietary analysis of individual equity securities. This includes an assessment by the Sub-Advisers of the potential impacts of material environmental, social and governance factors on the long-term risk and return profile of a company. In narrowing down the universe of eligible investments, the Sub-Advisers employ a quantitative and qualitative approach to identify smaller international companies that the Sub-Advisers believe have the potential to generate attractive returns.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.

- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Mid-capitalization and small-capitalization investing risk* The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for

Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.

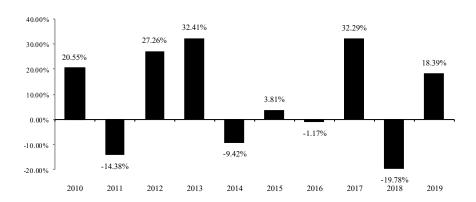

- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Cyclical opportunities risk The Fund may invest in stocks of a company in an effort to take tactical advantage of an anticipated event in that company's business cycle which evidences growth potential, short-term market movements or changes affecting particular issuers or industries. If the anticipated event does not occur, the value of the stock could fall, which in turn could depress the Fund's share prices.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Real estate investment risk Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

Summary Prospectus – April 27, 2020

JNL/GQG Emerging Markets Equity Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.90%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.16%
Total Annual Fund Operating Expenses	1.36%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/GQG Emerging Markets Equity Fund Class A			
1 year	3 years	5 years	10 years
\$138	\$431	\$745	\$1,635

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period		
1/1/2019 - 12/31/2019	85%	

Principal Investment Strategies. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities of emerging market companies.

The equity securities in which the Fund invests are primarily publicly traded common stocks. For purposes of the Fund's 80% investment policy, however, equity securities also include depositary receipts (including American Depositary Receipts ("ADRs"), European Depositary Receipts ("EDRs") and Global Depositary Receipts ("GDRs")), which are certificates typically issued by a bank or trust company that represent ownership interests in securities of non-U.S. companies, and participation notes ("P-Notes"), which are derivative instruments designed to replicate equity exposure in certain foreign markets where direct investment is either impossible or difficult due to local investment restrictions. The Fund may invest in initial public offerings ("IPOs") and securities of companies with any market capitalization. Certain instruments in which the Fund invests may be illiquid or thinly-traded securities. The Fund may invest in exchange traded funds ("ETFs"), including commodity ETFs that provide exposure to or invest in gold.

The Fund may also invest in A Shares of companies based in the People's Republic of China ("China") that trade on the Shanghai Stock Exchange and the Shenzhen Stock Exchange through the Shanghai – Hong Kong and Shenzhen – Hong Kong Stock Connect programs ("Stock Connect"). Stock Connect is a mutual stock market access program designed to, among other things, enable foreign investments in China.

The Fund considers a company to be an emerging market company if: (i) at least 50% of the company's assets are located in emerging market countries; (ii) at least 50% of the company's revenue is generated in emerging market countries; (iii) the company is organized, conducts its principal operations, or maintains its principal place of business or principal manufacturing facilities in an emerging market country; (iv) the company's securities are traded principally in an emerging market country; or (v) GQG Partners LLC ("Sub-Adviser") otherwise believes that the company's assets are exposed to the economic fortunes and risks of emerging market countries (because, for example, the Sub-Adviser believes that the company's growth is dependent on emerging market countries). The Fund considers classifications by the World Bank, the International Finance Corporation, the International Monetary Fund and the Fund's benchmark index provider in determining whether a country is an emerging market country. Emerging market countries generally include every country in the world except the U.S., Canada, Japan, Australia, New Zealand, and most of the countries in Western Europe. From time to time, the Fund may focus its investments in a particular country or geographic region.

In managing the Fund's investments, the Sub-Adviser pursues a "growth style" of investing through which it seeks to capture market upside while limiting downside risk through full market cycles by combining a rigorous screening process with fundamental analyses to seek to identify and invest in companies that the Sub-Adviser believes have favorable long-term economic prospects. Specifically, the Sub-Adviser seeks to buy companies that it believes are reasonably priced, have strong fundamental business characteristics, sustainable relative earnings growth and the ability to outperform peers over a full market cycle, and can sustain the value of their securities in a market downturn, while the Sub-Adviser seeks to avoid investments in companies that it believes have low profit margins or unwarranted leverage. The Sub-Adviser may sell a company if it believes that the company's long-term competitive advantage or relative earnings growth prospects have deteriorated, or the Sub-Adviser has otherwise lost conviction in the company. The Sub-Adviser may also sell a company if the company has met its price target or is involved in a business combination, if the Sub-Adviser identifies a more attractive investment opportunity, or the Sub-Adviser wishes to reduce the Fund's exposure to the company or a particular country or geographic region.

The Fund is classified as "non-diversified," which means that it may invest a larger percentage of its assets in a smaller number of issuers than a diversified fund.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

• Equity securities risk – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The

value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets,

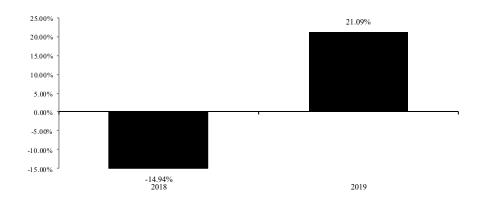

- confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Investing in China A Shares risk Investments in Class A Shares of Chinese companies involve certain risks and special considerations not typically associated with investments in U.S. companies, such as greater government control over the economy, political and legal uncertainty, currency fluctuations or blockage, the risk that the Chinese government may decide not to continue to support economic reform programs and the risk of nationalization or expropriation of assets. Additionally, the Chinese securities markets are emerging markets subject to the special risks applicable to developing and emerging market countries described elsewhere in this prospectus.
- *Investing through Stock Connect risk* The Fund may invest directly in China A shares through Stock Connect, and will be subject to the following risks: sudden changes in quota limitations, application of trading suspensions, differences in trading days between the PRC and Stock Connect, operational risk, clearing and settlement risk and regulatory and taxation risk.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Participation note risk An investment in a participation note involves additional risks beyond the risks normally associated with a direct investment in the underlying security and a participation note's performance may differ from the underlying security's performance. Holders of participation notes do not have the same rights as an owner of the underlying stock and are subject to the credit risk of the issuer, and participation notes are privately issued and may be illiquid.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Redemption risk Large redemption activity could result in the Fund being forced to sell portfolio securities at a loss or before the Adviser or Sub-Adviser would otherwise decide to do so. Large redemption activity in the Fund may also result in increased expense ratios, higher levels of realized capital gains or losses with respect to the Fund's portfolio securities, higher brokerage commissions, and other transaction costs.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Investments in IPOs risk IPOs issued by unseasoned companies with little or no operating history are risky and highly volatile.
- Commodity ETF risk In addition to the risks described under "exchange-traded funds investing risk," the value of the Fund's investment in ETFs that invest in commodity-related securities may be affected by changes in overall market movements or factors affecting a particular industry or commodity and may fluctuate significantly over short periods for a variety of factors, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, political and regulatory developments. Investments linked to the prices of commodities are considered speculative and may be more volatile than investments in other types of securities or instruments. The commodity markets are subject to temporary distortions or other disruptions due to a variety of factors, including the lack of liquidity in the markets, the participation of speculators and government regulation and intervention.
- *Portfolio turnover risk* Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

Summary Prospectus – April 27, 2020

JNL/Harris Oakmark Global Equity Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.68%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.15%
Total Annual Fund Operating Expenses ²	1.13%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Expense information has been restated to reflect current fees.

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period		
1/1/2019 - 12/31/2019	30%	

Principal Investment Strategies. Under normal market conditions, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of common stocks of U.S. and non-U.S. companies. The Fund invests in the securities of companies located in at least three countries. Typically, the Fund invests between 25-75% of its total assets in securities of U.S. companies and between 25-75% of its total assets in securities of non-U.S. companies. There are no geographic limits on the Fund's non-U.S. investments, and the Fund may invest in securities of companies located in developed or emerging markets. The Fund may invest in the securities of large-, mid-, and small-capitalization companies.

The Fund uses a value investment philosophy in selecting equity securities. This value investment philosophy is based upon the belief that, over time, a company's stock price converges with Harris Associate L.P.'s ("Sub-Adviser") estimate of the company's intrinsic value. By "intrinsic value," the Sub-Adviser means its estimate of the price a knowledgeable buyer would pay to acquire the entire business. The Fund's Sub-Adviser believes that investing in securities priced significantly below what the Sub-Adviser believes is a company's intrinsic value presents the best opportunity to achieve the Fund's investment objective.

The Sub-Adviser uses this value investment philosophy to identify companies that have discounted stock prices compared to what the Sub-Adviser believes are the companies' intrinsic values. In assessing such companies, the Sub-Adviser looks for the following characteristics, although not all of the companies selected will have all of these attributes: (1) free cash flows and intelligent investment of excess cash; (2) earnings that are growing and are reasonably predictable; and (3) a high level of ownership by management.

In making its investment decisions, the Sub-Adviser uses a "bottom-up" approach focused on individual companies, rather than focusing on specific economic factors or specific industries. To facilitate its selection of investments that meet the criteria described above, the Sub-Adviser uses independent, in-house research to analyze each company. The Sub-Adviser does not rely upon recommendations generated from other brokerage investment firms, generally referred to as the "Street." As part of this selection process, the Sub-Adviser's analysts typically visit companies and conduct other research on the companies and their industries.

Once the Sub-Adviser identifies a stock that it believes is selling at a significant discount compared to the Sub-Adviser's estimate of the company's intrinsic value and the company has one or more of the additional qualities mentioned above, the Sub-Adviser may consider buying that stock for the Fund. The Sub-Adviser usually sells a stock when the price approaches its estimated intrinsic value. This means the Sub-Adviser sets specific "buy" and "sell" targets for each stock held by the Fund. The Sub-Adviser also monitors each holding and adjusts these price targets as warranted to reflect changes in a company's fundamentals.

The Sub-Adviser believes that holding a relatively small number of stocks allows its "best ideas" to have a meaningful impact on the Fund's performance. Therefore, the Fund's portfolio typically holds thirty to sixty stocks, and as a result, a significant percentage of the Fund's total assets may at times be invested in a particular region, sector or industry.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect

a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.

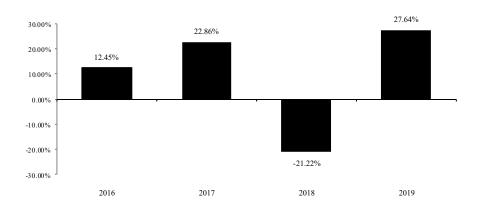

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective September 25, 2017, the Fund was combined with JNL/Red Rocks Listed Private Equity Fund (the "Acquired Fund") with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the

prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

Summary Prospectus – April 27, 2020

JNL/Heitman U.S. Focused Real Estate Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek to achieve long-term total return.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.65%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.15%
Total Annual Fund Operating Expenses	1.10%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Heitman U.S. Focused Real Estate Fund Class A				
	1 year	3 years	5 years	10 years
	\$112	\$350	\$606	\$1,340

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	172%

Principal Investment Strategies. Under normal market conditions, the Fund seeks to achieve its investment objective by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities issued by real estate companies operating in the United States, including real estate investment trusts ("REITs"). The Fund's investments in equity securities may include common stocks, preferred stocks, and securities offered in initial public offerings ("IPOs"). The Fund may invest in these equity securities directly or indirectly through investments in other investment companies, including exchange-traded funds ("ETFs"). The Fund defines a real estate company as any company that derives at least 50% of its revenue from, or has at least 50% of its assets in, real estate. The Fund considers a real estate company to be operating in the United States if the real estate company: (i) is organized in the United States, (ii) trades principally in a United States market, or (iii) derives at least 50% of its revenue from or has at least 50% of its assets located in, the United States. The Fund typically invests in equity securities issued by small to medium capitalization real estate companies, but the Fund's investments are not limited to a particular capitalization range.

Heitman Real Estate Securities LLC, the Fund's sub-adviser ("Sub-Adviser") makes investment decisions through a bottom-up strategy, focusing on individual security selection. To guide the portfolio construction process, the Sub-Adviser incorporates both quantitative and qualitative analysis in real estate securities. The Sub-Adviser analyzes factors such as management, financial condition, cash flow, and company's growth potential estimates to select companies in the real estate industry that it believes will make attractive long-term investments. The research process includes an evaluation of the commercial real estate supply and demand dynamics, management, strategy, property quality, financial strength and corporate structure. Judgments with respect to risk control, geographic and property sector variety, liquidity and other factors are considered and drive the Sub-Adviser's investment decisions. In an effort to achieve its goal, the Fund may engage in active and frequent trading.

The Sub-Adviser may also consider environmental, social, and governance factors in its fundamental investment analysis.

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Real estate investment risk Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a

sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.

- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Investments in IPOs risk IPOs issued by unseasoned companies with little or no operating history are risky and highly volatile.
- Regulatory investment limits risk The U.S. "Federal Securities Laws" may limit the amount a Fund may invest in certain securities. These limits may be Fund specific or they may apply to the investment manager. As a result of these regulatory limitations under the Federal Securities Laws, and the asset management and financial industry business activities of the investment manager and its affiliates, the investment manager and the Funds may be prohibited from or limited in effecting transactions in certain securities. The investment manager and the Fund may encounter trading limitations or restrictions because of aggregation issues or other regulatory requirements. The Federal Securities Laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These regulatory investment limits may increase the Fund's expenses and may limit the Fund's performance.
- Preferred stock risk Preferred stock represents an equity interest in a company that generally entitles the holder to receive, in preference to the holders of other stocks such as common stocks, dividends and a fixed share of the proceeds resulting from a liquidation of the company.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests

in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- ESG (Environmental, Social & Governance) investment strategy risk The Fund's ESG investment strategy limits the types and number of investment opportunities available to the Fund and, as a result, the Fund may underperform other funds that do not have an ESG focus. The Fund's ESG investment strategy may result in the Fund investing in securities or industry sectors that underperform the market as a whole or underperform other funds screened for ESG standards. In addition, the Index Provider may be unsuccessful in creating an index composed of companies that exhibit positive ESG characteristics.

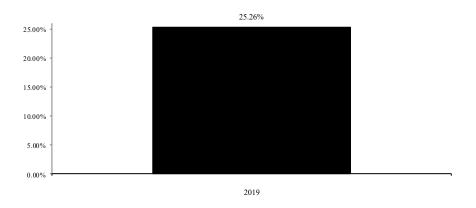

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective December 31, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Wilshire US RESI TR USD Index with the MSCI US REIT Index as the Fund's primary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

Summary Prospectus – April 27, 2020

JNL/Invesco Diversified Dividend Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital and, secondarily, current income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.53%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Acquired Fund Fees and Expenses ²	0.02%	
Total Annual Fund Operating Expenses	1.00%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/Invesco Diversified Dividend Fund Class A			
1 year	3 years	5 years	10 years
\$102	\$318	\$552	\$1,225

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	5%

Principal Investment Strategies. The Fund invests primarily in dividend-paying equity securities. The principal type of equity security in which the Fund invests is common stock.

The Fund invests in securities that Invesco Advisers, Inc. ("Invesco" or "Sub-Adviser") believes are undervalued based on various valuation measures.

The Fund may invest up to 25% of its net assets in securities of foreign issuers.

In selecting investments, Invesco seeks to identify dividend-paying issuers with strong profitability, solid balance sheets and capital allocation policies that support sustained or increasing dividends and share repurchases. Through fundamental research, financial statement analysis and the use of several valuation techniques, Invesco estimates a target price for each security over a 2-3 year investment horizon. Invesco seeks to manage risk by utilizing a valuation framework, careful stock selection and a rigorous buy-and-sell discipline and incorporate an assessment of the potential reward relative to the downside risk to determine a fair valuation over the investment horizon. When evaluating cyclical businesses, Invesco seeks companies that have normalized earnings power greater than that implied by their current market valuation and that return capital to shareholders via dividends and share repurchases. Invesco then constructs a portfolio that it believes provides the best total return profile, which is created by seeking a combination of price appreciation potential, dividend income and capital preservation.

Invesco maintains a rigorous sell discipline and considers selling or trimming a position in a stock when it no longer materially meets Invesco's investment criteria, including when (1) a stock reaches its fair valuation (target price); (2) a company's fundamental business prospects deteriorate; or (3) a more attractive investment opportunity presents itself.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

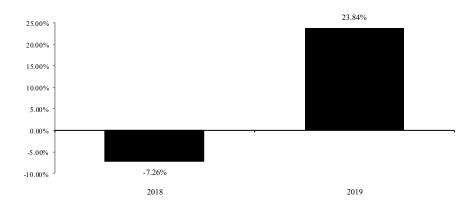

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

Summary Prospectus – April 27, 2020

JNL/Invesco Global Real Estate Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is high total return.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.59%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Total Annual Fund Operating Expenses	1.05%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Invesco Global Real Estate Fund Class A			
1 year	3 years	5 years	10 years
\$107	\$334	\$579	\$1,283

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	52%

Principal Investment Strategies. The Fund seeks to meet its investment objective by investing, normally, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the securities of real estate and real estate-related issuers and derivatives and other instruments that have economic characteristics similar to such securities. The Fund's common stock investments may also include China A-shares (shares of companies based on mainland China that trade on the Shanghai Stock Exchange and the Shenzhen Stock Exchange). The Fund invests primarily in real estate investment trusts ("REITs"), depositary receipts and equity securities (including common and preferred stock, and convertible stock) of domestic and foreign issuers. The Fund invests, under normal circumstances, in securities of issuers located in at least three different countries, including the United States. The Fund may invest up to 20% of its net assets in securities of issuers located in emerging markets countries, i.e., those that are in the initial stages of their industrial cycles. These companies include REITs or other real estate operating companies.

Investment in equity and debt securities of companies unrelated to the real estate industry are generally limited to securities that the portfolio managers believe are undervalued and have potential for growth of capital. The Fund may purchase debt securities including U.S. Treasury and agency bonds and notes. It may also invest up to 10% of its total assets in non-investment grade debt securities (commonly known as "junk-bonds") of real estate and real estate-related issuers.

The Fund also may engage in short sales of securities.

The Fund can invest in derivative instruments including forward foreign currency contracts.

The Fund can use forward foreign currency contracts to hedge against adverse movements in the foreign currencies in which portfolio securities are denominated; though the Fund has not historically used these instruments.

The Fund may invest in securities of issuers of all capitalization sizes. Real estate companies tend to have smaller asset bases compared with other market sectors, therefore, the Fund may hold a significant amount of securities of small- and mid-capitalization issuers.

The Fund will concentrate its investments in the securities of domestic and foreign real estate and real estate-related companies. For purposes of this concentration, real estate and real estate-related companies shall consist of companies (i) where at least 50% of its assets, gross income or net profits are attributable to ownership, construction, management, or sale of residential, commercial or industrial real estate, including listed equity REITs that own property, and mortgage REITs which make short-term construction and development mortgage loans or which invest in long-term mortgages or mortgage pools, or (ii) whose products and services are related to the real estate industry, such as manufacturers and distributors of building supplies and financial institutions which issue or service mortgages.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Real estate investment risk Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Investing in China A Shares risk Investments in Class A Shares of Chinese companies involve certain risks and special considerations not typically associated with investments in U.S. companies, such as greater government control over the economy, political and legal uncertainty, currency fluctuations or blockage, the risk that the Chinese government may decide not to continue to support economic reform programs and the risk of nationalization or expropriation of assets. Additionally, the Chinese securities markets are emerging markets subject to the special risks applicable to developing and emerging market countries described elsewhere in this prospectus.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.

- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Convertible securities risk Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Preferred stock risk* Preferred stock represents an equity interest in a company that generally entitles the holder to receive, in preference to the holders of other stocks such as common stocks, dividends and a fixed share of the proceeds resulting from a liquidation of the company.

• Short sales risk – A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.

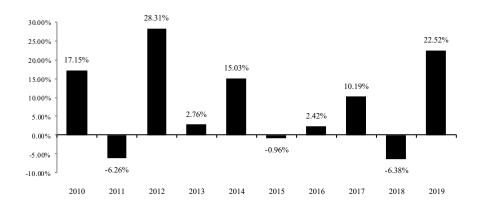

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the FTSE EPRA/Nareit Developed Real Estate Index with the FTSE EPRA/Nareit Global Real Estate Index as the Fund's primary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Invesco International Growth Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term growth of capital.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.52%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	0.99%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

	JNL/Invesco International Growth Fund Class A			
Г	1 year	3 years	5 years	10 years
	\$101	\$315	\$547	\$1,213

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	25%

Principal Investment Strategies. The Fund seeks to achieve its objective by primarily investing in equity securities and depositary receipts of foreign issuers. The Fund focuses its investments in common and preferred stock and invests, under normal circumstances in securities of companies located in at least three countries in the developed markets of Western Europe and the Pacific Basin. The Fund may also invest no more than 30% of its total assets in emerging markets securities. Emerging markets countries are those countries that are in the initial stages of their industrial cycles. The Schedule of Investments included in the Fund's annual and semi-annual reports identifies the countries in which the Fund has historically invested, as of the date of the reports.

A depositary receipt is generally issued by a bank or financial institution and represents an ownership interest in the common stock or other equity securities of a foreign company.

The Fund invests primarily in securities of issuers that are considered by the Fund's portfolio managers to have potential for earnings or revenue growth.

The Fund invests primarily in the securities of large-capitalization issuers; however, the Fund may invest a significant amount of its net assets in the securities of mid-capitalization issuers.

The Fund considers an issuer to be a large-capitalization issuer if it has a market capitalization, at the time of purchase, within the range of the largest and smallest capitalized companies included in the Russell 1000® Index during the most recent 11-month period (based on month-end data) plus the most recent data during the current month. As of December 31, 2019, the capitalization of companies in the Russell 1000® Index ranged from \$823 million to \$1.304 trillion.

The Fund considers an issuer to be a mid-capitalization issuer if it has a market capitalization, at the time of purchase, within the range of the largest and smallest capitalized companies included in the Russell Midcap® Index during the most recent 11-month period (based on month-end data) plus the most recent data during the current month. As of December 31, 2019, the capitalization of companies in the Russell Midcap® Index ranged from \$823 million to \$78.7 billion.

The Fund also invests in China A-shares (shares of companies based in mainland China that trade on the Shanghai Stock Exchange and The Shenzhen Stock Exchange).

The Fund can invest in derivative instruments including forward foreign currency contracts and futures contracts.

The Fund can utilize forward foreign currency contracts to mitigate the risk of foreign currency exposure. A forward foreign currency contract is an agreement between parties to exchange a specified amount of currency at a specified future time at a specified rate. Forward foreign currency contracts are used to protect against uncertainty in the level of future foreign currency exchange rates. The Fund can use these contracts to hedge against adverse movements in the foreign currencies in which portfolio securities are denominated, though the Fund has typically not used these instruments.

The Fund can invest in futures contracts, including index futures, to seek exposure to certain asset classes. The use of such futures contracts is primarily intended to manage cash balances on a short-term basis, though the managers may on occasion use such instruments, where appropriate, to manage other elements of the Fund. A futures contract is a standardized agreement between two parties to buy or sell a specified quantity of an underlying asset at a specified price at a specified future time. The value of the futures contract tends to increase and decrease in tandem with the value of the underlying asset. Futures contracts are bilateral agreements, with both the purchaser and the seller equally obligated to complete the transaction. Depending on the terms of the particular contract, futures contracts are settled by purchasing an offsetting contract, physically delivering the underlying asset on the settlement date or paying a cash settlement amount on the settlement date.

The Sub-Adviser employs a disciplined investment strategy that emphasizes fundamental research. The fundamental research primarily focuses on identifying quality growth companies and is supported by quantitative analysis, portfolio construction and risk management. The strategy primarily focuses on identifying issuers that the Sub-Adviser believes have sustainable above-average earnings growth, efficient capital allocation, and attractive prices. Investments for the portfolio are selected bottom-up on a security-by-security basis. The focus is on the strengths of individual issuers, rather than sector or country trends. The Sub-Adviser may

consider selling a security for several reasons, including when (1) its price changes such that they believe it has become too expensive, (2) the original investment thesis for the company is no longer valid, or (3) a more compelling investment opportunity is identified.

The Fund's investments in the types of securities described in this prospectus vary from time to time, and, at any time, the Fund may not be invested in all of the types of securities described in this prospectus. The Fund may also invest in securities and other investments not described in this prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Investing in China A Shares risk Investments in Class A Shares of Chinese companies involve certain risks and special considerations not typically associated with investments in U.S. companies, such as greater government control over the economy, political and legal uncertainty, currency fluctuations or blockage, the risk that the Chinese government may decide not to continue to support economic reform programs and the risk of nationalization or expropriation of assets. Additionally, the

- Chinese securities markets are emerging markets subject to the special risks applicable to developing and emerging market countries described elsewhere in this prospectus.
- Investing through Stock Connect risk The Fund may invest directly in China A shares through Stock Connect, and will be subject to the following risks: sudden changes in quota limitations, application of trading suspensions, differences in trading days between the PRC and Stock Connect, operational risk, clearing and settlement risk and regulatory and taxation risk.
- Pacific Rim investing risk The Pacific Rim economies are in various stages of economic development. Many of the Pacific Rim economies may be intertwined, so they may experience recessions at the same time. Furthermore, many of the Pacific Rim economies are characterized by high inflation, undeveloped financial services sectors, heavy reliance on international trade, frequent currency fluctuations, devaluations, or restrictions, political and social instability, and less efficient markets. If the Fund concentrates investments in Pacific Rim markets, the Fund's performance is expected to be closely tied to social, political, and economic conditions within the Pacific Rim region and to be more volatile than the performance of more geographically diversified funds.
- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Mid-capitalization and small-capitalization investing risk* The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For

example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.

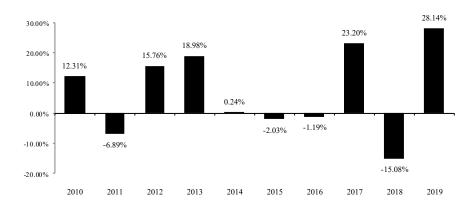

- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the

prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Invesco Small Cap Growth Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term growth of capital.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.65%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.11%	
Total Annual Fund Operating Expenses	1.06%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	JNL/Invesco Small Cap Growth Fund Class A			
ĺ	1 year	3 years	5 years	10 years
ĺ	\$108	\$337	\$585	\$1,294

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	31%

Principal Investment Strategies. The Fund seeks to meet this objective by investing, normally, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in securities of small-capitalization companies, at the time of purchase. The Fund invests primarily in equity securities. The principal type of equity security in which the Fund invests is common stock. The Fund considers a company to be a small-capitalization company if it has a market capitalization, at the time of purchase, no larger than the largest capitalized company included in the Russell 2000® Index during the most recent 11-month period (based on month-end data) plus the most recent data during the current month. As of December 31, 2019, the market capitalization resulting from this formula was \$7.2 billion.

The Fund may also invest up to 25% of its total assets in foreign securities. The Fund may also invest up to 20% of its assets in equity securities of issuers that have market capitalizations in other market capitalization ranges.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.

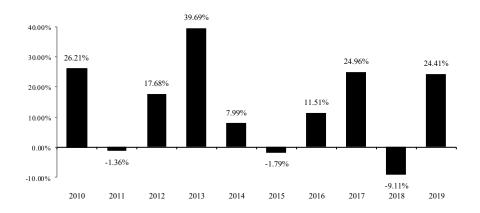

- Information technology sector risk Information technology companies face intense competition and potentially rapid product obsolescence. They are also heavily dependent on intellectual property rights and may be adversely affected by the loss or impairment of those rights.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Clay Manley	2008	Portfolio Manager, Invesco

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/JPMorgan Global Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to maximize long-term total return.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses	
(Expenses that you pay each year as a percentage of the value of your investment)	Clare A
	Class A
Management Fee	0.60%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ^{1,2}	0.18%
Acquired Fund Fees and Expenses ³	0.19%
Total Annual Fund Operating Expenses ⁵	1.27%
Less Waiver/Reimbursement ⁴	0.17%
Total Annual Fund Operating Expenses After Waiver/Reimbursement ⁵	1.10%

- ¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- 2 "Other Expenses" are based on amounts incurred during the period ended December 31, 2019. The amount includes financing costs associated with secured borrowings. The annualized ratios of financing costs related to secured borrowings were 0.01%. The Fund's actual financing costs may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's involvement with secured borrowings and the costs associated with those transactions, each of which is expected to vary over time.
- ³ Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.
- ⁴ JNAM has contractually agreed to waive a varying portion of its management fee in an amount equivalent to the Acquired Funds Fees and Expenses ("AFFE") attributable to the Fund's investment in funds managed by the Sub-Adviser, J.P. Morgan Investment Management Inc. (each a "JPMorgan Underlying Fund"). The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter

unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.

⁵ Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/JPMorgan Global Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$112	\$386	\$681	\$1,519

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	188%

Portfolio turnover for the period of January 1, 2019 to June 23, 2019 is from the prior sub-adviser, AllianceBernstein L.P.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by allocating among strategies managed by unaffiliated investment managers, Ivy Investment Management Company ("Ivy") and J.P. Morgan Investment Management Inc. ("JPMorgan," and together with Ivy, the "Sub-Advisers"). Each of the Sub-Advisers generally provides day-to-day management for a designated portion of the Fund's assets. Ivy serves as the sub-adviser only with respect to certain private investments held by the Fund. As of the date of this prospectus, it is contemplated that the duration of Ivy's involvement as sub-adviser to the Fund will be for however long it takes to sell these private investments.

The Fund has significant flexibility to invest in a broad range of equity, fixed income, and alternative asset classes in the U.S. and other markets throughout the world, both developed and emerging. JPMorgan uses a flexible asset allocation approach in constructing the Fund's portfolio.

Under normal circumstances, the Fund will invest at least 40% of its total assets in countries other than the United States unless JPMorgan determines that conditions are not favorable. If JPMorgan determines that conditions are not favorable, the Fund may invest under 40% of its total assets in non-U.S. countries provided that the Fund will not invest less than 30% of its total assets in non-U.S. countries under normal circumstances except for temporary defensive purposes. JPMorgan will invest in issuers in at least three countries other than the U.S. under normal circumstances. The Fund will invest across the full range of asset classes.

The Fund's equity investments may include common stock, preferred stock, exchange traded funds ("ETFs"), convertible securities, depositary receipts, warrants to buy common stocks, master limited partnerships ("MLPs"), and other unaffiliated mutual funds and ETFs advised by JPMorgan ("JPMorgan Funds") and, for the limited purposes described below, market cap weighted index ETFs that are managed by investment advisers that are unaffiliated with JPMorgan ("Unaffiliated Passive ETFs", and together with JPMorgan Funds, the "Underlying Funds"). The Fund is generally unconstrained by any particular capitalization with regard to its equity investments.

The Fund's fixed income investments may include bank obligations, convertible securities, U.S. Government securities (including agencies and instrumentalities), mortgage-backed and mortgage-related securities (which may include securities that are issued by non-governmental entities), domestic and foreign corporate bonds, high yield securities ("junk bonds"), loan assignments and participations, debt obligations issued or guaranteed by a foreign sovereign government or its agencies, authorities or political subdivisions, floating rate securities, inflation-indexed bonds, inflation-linked securities such as Treasury Inflation Protected Securities ("TIPS"), JPMorgan Funds, and, for the limited purposes described below, Unaffiliated Passive ETFs. The Fund is generally unconstrained with regard to the duration of its fixed income investments.

The Fund's alternative investments include securities that are not a part of the Fund's global equity or global fixed income investments. These investments may include individual securities (such as convertible securities, inflation-sensitive securities and preferred stock), JPMorgan Funds, ETFs, exchange traded notes ("ETNs"), exchange-traded commodities ("ETCs"), and, for the limited purposes described below, Unaffiliated Passive ETFs. The investments in this asset class may give the Fund exposure to:

market neutral strategies, long/short strategies, real estate (including real estate investment trusts ("REITS")), currencies, and commodities.

To the extent the Fund invests in the Underlying Funds, JPMorgan expects to select JPMorgan Funds without considering or canvassing the universe of unaffiliated underlying funds available, even though there may (or may not) be one or more unaffiliated underlying funds that investors might regard as more attractive for the Fund or that have superior returns. JPMorgan also generally expects to select a JPMorgan ETF unless JPMorgan determines the investment is not available to or appropriate for the Fund. To the extent JPMorgan determines that an investment in a JPMorgan ETF is not available to or appropriate for the Fund, only then will JPMorgan consider investing in an Unaffiliated Passive ETF. JPMorgan expects that, to the extent the Fund invests in ETFs, JPMorgan will primarily invest in passive ETFs. A "passive ETF" is a registered investment company that seeks to track the performance of a particular market security or index. The index may be a broad-based market index or it may relate to particular sectors, markets, regions or industries.

The Fund may also hold cash and cash equivalents.

In addition to direct investments in securities, derivatives, which are instruments that have a value based on another instrument, may also be used as substitutes for securities in which the Fund can invest. For example, in implementing equity market neutral strategies and macro-based strategies, the Fund may use a total return swap to establish both long and short positions in order to gain the desired exposure rather than physically purchasing and selling short each instrument. The Fund may use futures contracts, options, forwards, and swaps to more effectively gain targeted equity and fixed income exposure from its cash positions, to hedge investments, for risk management and to attempt to increase the Fund's gain. The Fund may use futures contracts, forward contracts, options (including options on interest rate futures contracts and interest rate swaps), swaps, and credit default swaps to help manage duration, sector and yield curve exposure and credit and spread volatility. The Fund may utilize exchange traded futures contracts for cash management and to gain exposure to equities pending investment in individual securities. To the extent that the Fund does not utilize underlying funds to gain exposure to commodities, it may utilize commodity linked derivatives or commodity swaps to gain exposure to commodities.

The Fund may invest in securities denominated in any currency. The Fund may utilize forward currency transactions to hedge exposure to non-dollar investments back to the U.S. dollar. The Fund may engage in short sales.

The Fund will likely engage in active and frequent trading.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.

- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- Corporate loan, sovereign entity loan, and bank loan risk Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank

Offered Rate ("LIBOR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.

- Real estate investment risk Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.
- Master limited partnership risk An investment in MLP units involves some risks that differ from an investment in the common stock of a corporation. Holders of MLP units have limited control on matters affecting the partnership. Investing in MLPs involves certain risks related to investing in the underlying assets of the MLPs and risks associated with pooled investment vehicles. MLPs holding credit-related investments are subject to interest rate risk and the risk of default on payment obligations by debt issuers. MLPs that concentrate in a particular industry or a particular geographic region are subject to risks associated with such industry or region. The benefit derived from the Fund's investment in MLPs is largely dependent on the MLPs being treated as partnerships for federal income tax purposes. Certain MLPs may be illiquid securities.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Exchange-traded note risk The value of an exchange-traded note ("ETN") may be influenced by maturity, level of supply and demand for the ETN, volatility and lack of liquidity in the underlying securities' markets, changes in the applicable interest rates, changes in the issuer's credit rating and economic, legal, political or geographic events that affect the referenced index. In addition, the notes issued by ETNs and held by the Fund are unsecured debt of the issuer.
- Short sales risk A short sale may be effected by selling a security that the Fund does not own. The Fund must borrow the security to make delivery to the buyer. The Fund is then obligated to replace the security borrowed by purchasing it subsequently at the market price at the time of replacement. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- Commodity risk Commodity prices can be extremely volatile and may be directly or indirectly affected by many factors, including changes in overall market movements, real or perceived inflationary trends, commodity index volatility, changes in interest rates or currency exchange rates, population growth and changing demographics, and factors affecting a particular industry or commodity, such as drought, floods, or other weather conditions, livestock disease, trade embargoes, competition from substitute products, transportation bottlenecks or shortages, fluctuations in supply and demand, tariffs, and international regulatory, political, and economic developments (e.g., regime changes and changes in economic activity levels).
- Commodity-linked derivatives risk The value of a commodity-linked derivative investment is typically based upon the price
 movements of a commodity, a commodity futures contract or commodity index, or some other readily measurable economic
 variable. The value of commodity-linked derivative instruments may be affected by changes in overall market movements,
 volatility of the underlying benchmark, changes in interest rates, or factors affecting a particular industry or commodity, such as
 drought, floods, weather, livestock disease, embargoes, tariffs and international economic, volatility in the spot market, and

political and regulatory developments. The value of commodity-linked derivatives will rise or fall in response to changes in the underlying commodity or related index. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. A liquid secondary market may not exist for certain commodity-linked derivatives, and there can be no assurance that one will develop. Commodity-linked derivatives also may be subject to credit and interest rate risks that generally affect the values of fixed-income securities. Therefore, at maturity, the Fund may receive more or less principal than it originally invested. The Fund may also receive interest payments that are more or less than the stated coupon interest payments.

- Convertible securities risk Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *Managed portfolio risk* As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Hedging instruments risk The Fund may attempt, from time to time, to hedge (protect) against currency risks, largely using forward foreign currency exchange contracts, where available and when, in the Sub-Adviser's opinion, it would be advantageous to the Fund. A forward foreign currency exchange contract is an agreement to buy or sell a specific currency at a future date and at a price set at the time of the contract. Forward foreign currency exchange contracts may reduce the risk of loss from a change in value of a currency, but they also limit any potential gains and do not protect against fluctuations in the value of the underlying position. For example, during periods when the U.S. dollar weakens in relation to a foreign currency, the Fund's use of a currency hedging program will result in lower returns than if no currency hedging programs were in effect. Forward foreign currency exchange contracts and put options are considered derivative investments, because their value and performance depend, at least in part, on the value and performance of an underlying asset. The Fund may also use futures, swaps, and other derivative instruments to hedge risk. The Fund's investment in derivatives may involve a small investment relative to the amount of risk assumed. To the extent the Fund enters into these transactions, its success will depend on the Sub-Adviser's ability to predict

market movements, and their use may have the opposite effect of that intended. Risks include potential loss due to the imposition of controls by a government on the exchange of foreign currencies, the loss of any premium paid to enter into the transaction, delivery failure, default by any other party, or inability to close out a position because the trading market becomes illiquid. In addition, for certain reasons, the Fund may not seek to establish a perfect correlation between such hedging instruments and the portfolio instruments being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. It is not possible to hedge fully or perfectly against any risk.

- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Preferred stock risk* Preferred stock represents an equity interest in a company that generally entitles the holder to receive, in preference to the holders of other stocks such as common stocks, dividends and a fixed share of the proceeds resulting from a liquidation of the company.
- TIPS and inflation-linked bonds risk The value of inflation-protected securities generally fluctuates in response to changes in real interest rates, which are tied to the relationship between nominal interest rates and the rate of inflation. As a result, if inflation rates were to rise at a faster rate than nominal rates, real interest rates might decline, leading to an increase in the value of inflation-protected securities. In contrast, if nominal interest rates increased at a faster rate than inflation, real interest rates might rise, leading to a decrease in the value of inflation-protected securities.
- Warrants risk If the price of the underlying stock does not rise above the exercise price before the warrant expires, the warrant generally expires without any value and the Fund loses any amount it paid for the warrant. As a result, investments in warrants may involve substantially more risk than investments in common stock. Warrants may trade in the same markets as their underlying stock; however, the price of the warrant does not necessarily move with the price of the underlying stock.
- Privately placed securities risk The Fund's investments may also include privately-placed securities, which are subject to resale restrictions. Investments in these securities usually will decrease a Fund's liquidity level to the extent the Fund may be unable to sell or transfer these securities due to restrictions on transfers or on the ability to find buyers interested in purchasing the securities. The illiquid nature of the market for privately placed securities, as well as the lack of publicly available information regarding these securities, may also adversely affect the Fund's ability to fair value such securities at certain times and could make it difficult for the Fund to sell them. The Fund could lose money on such investments.
- LIBOR replacement risk In addition to other interbank offered rates, the most common benchmark rate for floating rate securities is London Interbank Offered Rate (LIBOR), which is the rate of interest offered on short-term interbank deposits, as determined by trading between major international banks. The UK Financial Conduct Authority has announced that LIBOR rates will no longer be published after the end of 2021. The elimination of LIBOR may adversely affect the interest rates on, and value of, certain Fund investments for which the value is tied to LIBOR. Alternatives to LIBOR are established or in development in most major currencies, including the Secured Overnight Financing Rate (SOFR) that is intended to replace U.S. dollar LIBOR. Markets are slowly developing in response to these new reference rates. However, questions around the rate transition's effect on the liquidity of securities and how to appropriately adjust these rates at the time of transition remain undetermined for the Fund. The effects of discontinuation of LIBOR on the Fund will vary, and it is difficult to predict the full impact of the transition away from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new products, instruments and contracts are commercially accepted and market practices become more settled.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. Performance prior to June 24, 2019 reflects the Fund's results when managed by the former sub-adviser, AllianceBernstein L.P. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

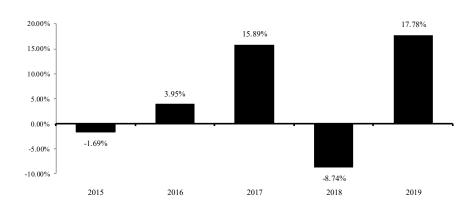

Effective April 27, 2020, the Fund will be combined with JNL/FPA + DoubleLine® Flexible Allocation Fund (the "Acquired Fund"), with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderate Index with the MSCI World Index (Net) as the Fund's primary benchmark.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund's replaced its secondary benchmark, 70% MSCI World Index (Net), 30% Bloomberg Barclays U.S. Treasury Index, with the 60% MSCI World Index (Net), 40% Bloomberg Barclays Global Aggregate Index.

W. Jeffery Surles, CFA	April 2020	Senior Vice President and Portfolio Manager, Ivy

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/JPMorgan Growth & Income Fund

(formerly, JNL/Franklin Templeton Mutual Shares Fund)
Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital growth over the long-term and to earn income from dividends.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.50%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.11%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses ³	0.92%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

³ Expense information has been restated to reflect current fees.

end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/JPMorgan Growth & Income Fund Class A			
1 year	3 years	5 years	10 years
\$94	\$293	\$509	\$1,131

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	22%

Portfolio turnover for the period of January 1, 2019 to December 31, 2019 is from the prior sub-adviser, Franklin Mutual Advisers, LLC.

Principal Investment Strategies. Under normal circumstances, the Fund invests at least 80% of its net assets (plus the amount of borrowings for investment purposes) in common stocks. J.P. Morgan Investment Management, Inc. ("Sub-Adviser") applies an active equity management style focused on identifying attractively valued securities given their growth potential over a long-term time horizon. The securities held by the Fund will predominantly be of companies with market capitalizations similar to those within the universe of the MSCI USA Value Index ("Index"), which includes both large cap and mid cap companies. As of the reconstitution of the Index on December 31, 2019, the market capitalizations of the companies in the Index ranged from \$518.3 million to \$553.8 billion.

The Fund may sell a security for several reasons, including a change in the company's fundamentals or if the Sub-Adviser believes the security is no longer attractively valued. Investments may also be sold if the Sub-Adviser identifies a stock that it believes offers a better investment opportunity.

While common stocks are the Fund's primary investment, the Fund may also invest in real estate investment trusts ("REITs") and depositary receipts. Depositary receipts are financial instruments representing a foreign company's publicly traded securities. A depositary receipt trades on a stock exchange in a country different from the company's local market.

Derivatives, which are instruments that have a value based on another instrument, exchange rate or index, may be used as substitutes for securities in which the Fund can invest. To the extent the Fund uses derivatives, the Fund will primarily use futures contracts to more effectively gain targeted equity exposure from its cash positions.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).

- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Mid-capitalization investing risk The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Real estate investment risk Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Redemption risk Large redemption activity could result in the Fund being forced to sell portfolio securities at a loss or before the Adviser or Sub-Adviser would otherwise decide to do so. Large redemption activity in the Fund may also result in increased expense ratios, higher levels of realized capital gains or losses with respect to the Fund's portfolio securities, higher brokerage commissions, and other transaction costs.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to April 27, 2020 reflects the Fund's results when managed by the former sub-adviser, Franklin Mutual Advisers, LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

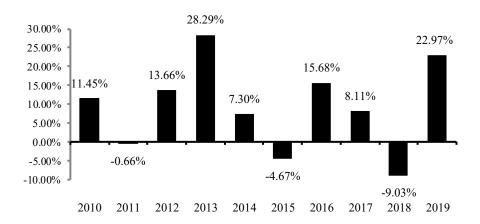

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 27, 2020, the Fund will be combined with JNL/PPM America Value Equity Fund (the "Acquired Fund"), with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective April 27, 2020, for consistency with the Fund's principal investment strategies, the Fund will replace the S&P 500 Index with the MSCI USA Value Index (which had been the Fund's secondary benchmark since June 24, 2019 under its former investment strategies) as the Fund's primary benchmark.

Annual Total Returns as of December 31

Class A

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/JPMorgan Hedged Equity Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek to provide capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.50%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ^{1,2}	0.16%	
Total Annual Fund Operating Expenses	0.96%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

^{2 &}quot;Other Expenses" are based on amounts incurred during the period ended December 31, 2019. The amount includes financing costs associated with secured borrowings. The annualized ratios of financing costs related to secured borrowings were 0.01%. The Fund's actual financing costs may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's involvement with secured borrowings and the costs associated with those transactions, each of which is expected to vary over time.

JNL/JPMorgan Hedged Equity Fund Class A				
1 year	3 years	5 years	10 years	
\$98	\$306	\$531	\$1,178	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	45%

Principal Investment Strategies. The Fund seeks to provide capital appreciation through participation in the broad equity markets while hedging overall market exposure relative to traditional long-only equity strategies. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities. The Fund seeks to achieve its investment objective by investing at least 80% of its assets in an "enhanced index," which primarily consist of common stocks of medium to large capitalization companies in the S&P 500 Index. The enhanced index is a portfolio benchmarked to the S&P 500 Index, subject to constraints based on tracking error, individual name holdings, and sector. Because the Fund uses an "enhanced index" strategy, not all of the stocks in the S&P 500 Index ("Index"), its primary benchmark, are included in the Fund, and the Fund's position in an individual stock may be overweighted or underweighted when compared to the Index. The Fund will also systematically purchase and sell exchange-traded put options and sell exchange-traded call options, employing an options overlay known as a "put/spread collar" strategy. The options may be based on the Index or on exchange-traded funds ("ETFs") that replicate the Index ("S&P 500 ETFs"). The combination of the diversified portfolio of equity securities, the downside hedge from long index put options, and the income from the short index call options is intended to provide the Fund with a portion of the returns associated with equity market investments while exposing investors to less risk than traditional long-only equity strategies. Specifically, the Fund seeks to provide a competitive risk-adjusted return over a full market cycle relative to the Index with lower volatility than traditional long-only equity strategies.

The Fund's combination of a diversified equity portfolio, with the "put/spread collar" options overlay strategy is designed to provide greater market protection than other equity investments, but may not always do so, particularly in rising equity markets when the Fund may underperform traditional equity strategies. In addition, as a result of the structure of the options overlay strategy, the Fund is not expected to provide market protection during times of low market volatility; during such periods, the Fund is expected to perform in line with broad equity markets.

The Fund may use futures contracts, primarily futures on indices, to more effectively gain targeted equity exposure from its cash positions and to hedge the Fund's portfolio if it is unable to purchase or write the necessary options for its overlay strategy.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives,

strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Hedging instruments risk The Fund may attempt, from time to time, to hedge (protect) against currency risks, largely using forward foreign currency exchange contracts, where available and when, in the Sub-Adviser's opinion, it would be advantageous to the Fund. A forward foreign currency exchange contract is an agreement to buy or sell a specific currency at a future date and at a price set at the time of the contract. Forward foreign currency exchange contracts may reduce the risk of loss from a change in value of a currency, but they also limit any potential gains and do not protect against fluctuations in the value of the underlying position. For example, during periods when the U.S. dollar weakens in relation to a foreign currency, the Fund's use of a currency hedging program will result in lower returns than if no currency hedging programs were in effect. Forward foreign currency exchange contracts and put options are considered derivative investments, because their value and performance depend, at least in part, on the value and performance of an underlying asset. The Fund may also use futures, swaps, and other derivative instruments to hedge risk. The Fund's investment in derivatives may involve a small investment relative to the amount of risk assumed. To the extent the Fund enters into these transactions, its success will depend on the Sub-Adviser's ability to predict market movements, and their use may have the opposite effect of that intended. Risks include potential loss due to the imposition of controls by a government on the exchange of foreign currencies, the loss of any premium paid to enter into the transaction, delivery failure, default by any other party, or inability to close out a position because the trading market becomes illiquid. In addition, for certain reasons, the Fund may not seek to establish a perfect correlation between such hedging instruments and the portfolio instruments being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. It is not possible to hedge fully or perfectly against any risk.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Options risk If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in

exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.

- Redemption risk Large redemption activity could result in the Fund being forced to sell portfolio securities at a loss or before the Adviser or Sub-Adviser would otherwise decide to do so. Large redemption activity in the Fund may also result in increased expense ratios, higher levels of realized capital gains or losses with respect to the Fund's portfolio securities, higher brokerage commissions, and other transaction costs.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

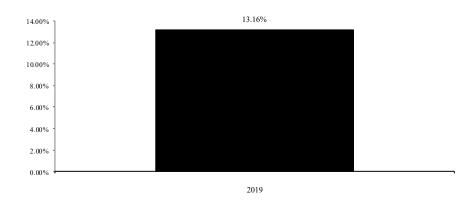

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 27, 2020, the Fund will be combined with the JNL/FAMCO Flex Core Covered Call Fund (the "Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/JPMorgan MidCap Growth Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek capital growth over the long-term.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.51%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.10%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	0.92%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

	JNL/JPMorgan MidCap Growth Fund Class A			
	1 year	3 years	5 years	10 years
Γ	\$94	\$293	\$509	\$1,131

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	48%

Principal Investment Strategies. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a broad portfolio of common stocks of companies with market capitalizations equal to those within the universe of Russell MidCap Growth Index stocks at the time of purchase. As of December 31, 2019, the market capitalization range for the Russell MidCap Growth Index was \$1.2 billion to \$78.7 billion.

The Fund may use derivatives to hedge various investments, for risk management and to increase the Fund's income or gain.

The Fund may also invest up to 20% of its total assets in all types of foreign securities.

The Fund maintains the flexibility to invest in securities of companies from a variety of sectors, but from time to time, based on economic conditions, the Fund may have significant investments in particular sectors.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially

those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

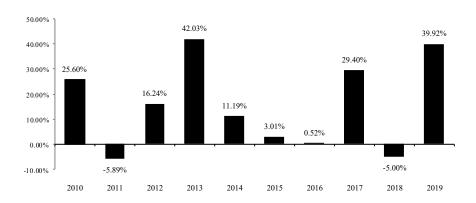

- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Information technology sector risk Information technology companies face intense competition and potentially rapid product obsolescence. They are also heavily dependent on intellectual property rights and may be adversely affected by the loss or impairment of those rights.
- *Portfolio turnover risk* Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/JPMorgan U.S. Government & Quality Bond Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to obtain a high level of current income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.29%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.11%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	0.71%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

	JNL/JPMorgan U.S. Government & Quality Bond Fund Class A			
ſ	1 year	3 years	5 years	10 years
ľ	\$73	\$227	\$395	\$883

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	16%

Principal Investment Strategies. The Fund under normal circumstances invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in U.S. Treasury securities, obligations issued by agencies or instrumentalities of the U.S. Government (which may not be backed by the U.S. Government) and mortgage-backed securities, that are supported either by the full faith and credit of the U.S. Government or their own credit, collateralized mortgage obligations issued by private issuers, and repurchase agreements related to the principal investments. J.P. Morgan Investment Management Inc. ("Sub-Adviser") actively manages the portfolio's interest rate exposure, yield curve positioning, sector allocation and security selection. Mortgage-backed securities selections are determined by reference to mathematical models that reflect certain payment assumptions and estimates of future economic factors. The Fund may also invest in high-quality corporate debt securities. All securities in the Fund are investment grade at the time of purchase.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

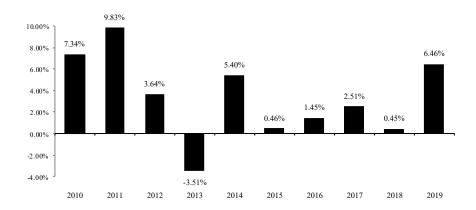

- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Managed portfolio risk* As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	35%

Principal Investment Strategies. Under normal market conditions, the Fund invests at least 80% of its assets (net assets plus any amount of borrowings made for investment purposes) in equity securities, principally common stocks, of non-U.S. companies whose principal activities are located in countries represented by the Morgan Stanley Capital International ("MSCI") Europe, Australasia and Far East ("EAFE") Index that Lazard Asset Management LLC, the Fund's sub-adviser (the "Sub-Adviser"), believes are undervalued based on their earnings, cash flow or asset values. The Sub-Adviser utilizes a bottom-up stock selection process, seeking attractive investments on an individual company basis. The Sub-Adviser believes that stock returns over time are driven by the sustainability and direction of financial productivity, balanced by valuation. However, the Sub-Adviser believes that financial markets will sometimes evaluate these factors inefficiently, presenting investment opportunities balanced by financial productivity.

As of the date of this prospectus, the countries represented by the MSCI EAFE Index include: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, and the United Kingdom. The Fund may also invest in other developed countries, including Canada, that are not represented in the index.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an

industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Government regulatory risk Certain industries or sectors, including, but not limited to, real estate, financial services, utilities, oil and natural gas exploration and production, and health care are subject to increased regulatory requirements. There can be no guarantee that companies in which the Fund invests will meet all applicable regulatory requirements. Certain companies could incur substantial fines and penalties for failing to meet government regulatory requirements. These requirements may also result in additional compliance expenses and costs. Such increased regulatory compliance costs could hurt a company's performance.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Fund's Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Market risk* Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor

sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.

- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

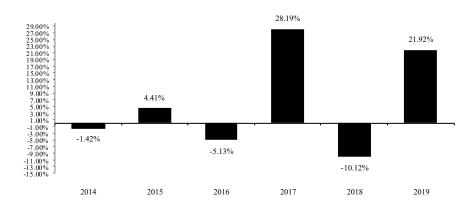

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/Lazard International Strategic Equity Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/Loomis Sayles Global Growth Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term growth of capital.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses	
(Expenses that you pay each year as a percentage of the value of your i	nvestment)
	Class A
Management Fee	0.55%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.15%
Total Annual Fund Operating Expenses	1.00%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Loomis Sayles Global Growth Fund Class A			
1 year	3 years	5 years	10 years
\$102	\$318	\$552	\$1,225

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	18%

Principal Investment Strategies. Under normal market conditions, the Fund will invest primarily in equity securities, including common stocks and depositary receipts. The Fund will invest in securities that provide exposure to no fewer than three countries, which will include the U.S. In addition, the Fund will invest at least 40% of its assets in securities of companies that maintain their principal place of business or conduct their principal business activities outside the U.S., companies that have their securities traded on non-U.S. exchanges, or companies that have been formed under the laws of non-U.S. countries. Notwithstanding the foregoing, a security is not considered to be foreign if it is included in the U.S. equity indices published by S&P Global Ratings or Russell Investments or if the security's "country of risk" defined by Bloomberg is the United States. The Fund may also invest up to 30% of its assets in emerging markets securities. The Fund considers a security to be an emerging markets security if its "country of risk" is included within the MSCI Emerging & Frontier Markets Index. The Fund focuses on stocks of large capitalization companies, but the Fund may invest in companies of any size.

The Fund normally invests across a wide range of sectors and industries. Loomis, Sayles & Company, L.P., the Fund's sub-adviser ("Sub-Adviser") employs a growth style of equity management, which means that the Fund seeks to invest in companies with sustainable competitive advantages, long-term structural growth drivers, attractive cash flow returns on invested capital, and management teams focused on creating long-term value for shareholders. The Sub-Adviser also aims to invest in companies when they trade at a significant discount to the estimate of intrinsic value.

The Fund will consider selling a portfolio investment when the Sub-Adviser believes an unfavorable structural change occurs within a given business or the markets in which it operates, a critical underlying investment assumption is flawed, when a more attractive reward-to-risk opportunity becomes available, when the current price fully reflects intrinsic value, or for other investment reasons which the Sub-Adviser deems appropriate.

The Fund may also engage in foreign currency transactions (including foreign currency forwards and foreign currency futures) for hedging purposes, invest in options for hedging and investment purposes and invest in securities issued pursuant to Rule 144A under the Securities Act of 1933 ("Rule 144A securities"). Under normal market conditions, the Sub-Adviser does not intend to hedge currency risk, which may cause the Fund to incur losses that would not have been incurred had the risk been hedged. Except as provided above, the Fund is not limited in the percentage of its assets that it may invest in these instruments.

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or
 perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor
 sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged
 and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular
 issuer, industry or the securities market as a whole.

- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Rule 144A securities risk Rule 144A securities are securities offered as exempt from registration with the SEC, but may be treated as liquid securities because there is a market for such securities. Rule 144A securities may have an active trading market, but carry the risk that the active trading market may not continue. To the extent that institutional buyers become, for a time, uninterested in purchasing Rule 144A securities, investing in such securities could increase the Fund's level of illiquidity.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are

tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Leverage risk Certain derivative transactions involve the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.

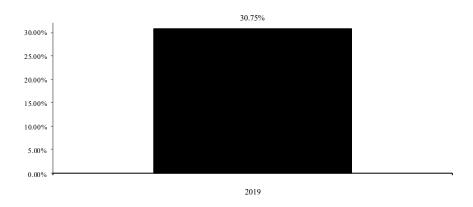

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 27, 2020, the Fund will be combined with the JNL/Franklin Templeton Global Fund, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/Lord Abbett Short Duration Income Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek a high level of income consistent with preservation of capital.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.35%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.15%
Total Annual Fund Operating Expenses	0.80%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser") and are based on estimated amounts for the current fiscal year.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Lord Abbett Short Duration Income Fund Class A			
1 year	3 years	5 years	10 years
\$82	\$255	\$444	\$990

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance. The Fund does not have a portfolio turnover rate as of the date of this Prospectus as it commenced operations on the date of this Prospectus.

Principal Investment Strategies. The Fund invests primarily in various types of short-duration debt (or fixed-income) securities. Under normal conditions, the Fund seeks to achieve its investment objective by investing at least 65% of its net assets in investment-grade debt securities of various types. Such investments primarily include:

- Corporate debt securities of U.S. issuers;
- Corporate debt securities of non-U.S. (including emerging market) issuers that are denominated in U.S. dollars;
- Mortgage-backed, mortgage-related, and other asset-backed securities, including privately issued mortgage-related securities and commercial mortgage-backed securities;
- Securities issued or guaranteed by the U.S. Government, its agencies, or instrumentalities; and
- Inflation-linked investments.

The Fund may invest in Treasury Inflation Protected Securities ("TIPS"), which are U.S. Government bonds whose principal automatically is adjusted for inflation as measured by the Consumer Price Index for All Urban Consumers ("CPI-U"), and other inflation-indexed securities issued by the U.S. Department of Treasury. The Fund may invest up to 35% of its net assets in any one or a combination of the following types of fixed income securities and other instruments:

- High-yield debt securities (commonly referred to as "lower-rated" or "junk" bonds);
- Debt securities of non-U.S. (including emerging market) issuers that are denominated in foreign currencies;
- Senior loans, including bridge loans, novations, assignments, and participations; and
- Convertible securities, including convertible bonds and preferred stocks.

The Fund will not invest more than 25% of its total assets in any industry; however, this limitation does not apply to mortgage-backed securities, privately issued mortgage-related securities, or securities issued by the U.S. Government or its agencies and instrumentalities. The Fund may, and typically does, invest substantially in commercial mortgage-backed securities ("CMBS"), including lower-rated CMBS.

The Fund attempts to manage interest rate risk through its management of the average duration of the securities it holds in its portfolio. Under normal conditions, the Fund will maintain its average dollar-weighted duration range between one and three years. The duration of a security takes into account the expected pattern of all payments of interest and principal on the security over time, including how these payments are affected by changes in interest rates.

The Fund may use derivatives to hedge against risk or to gain investment exposure. Currently, the Fund expects to invest in derivatives consisting principally of futures, forwards, options, and swaps. The Fund may use derivatives to seek to enhance returns, to attempt to hedge some of its investment risk, to manage portfolio duration, as a substitute for holding the underlying asset on which the derivative instrument is based, or for cash management purposes. For example, the Fund may invest in or sell short U.S. Treasury futures, securities index futures (such as the Markit CMBX Index, a synthetic tradable index referencing a basket of CMBS), other futures, and/or currency forwards to adjust the Fund's related exposures or for other portfolio management reasons.

The Fund buys and sells securities using a relative value-oriented investment process, meaning the Fund generally seeks more investment exposure to securities believed to be undervalued and less investment exposure to securities believed to be overvalued. The Fund combines top-down and bottom-up analysis to construct its portfolio, using a blend of quantitative and fundamental research. As part of its top-down analysis, the Fund evaluates global economic conditions, including monetary, fiscal, and regulatory policy, as well as the political and geopolitical environment, in order to identify and assess opportunities and risks across different segments of the fixed income market. The Fund employs bottom-up analysis to identify and select securities for investment by the Fund based on in-depth company, industry, and market research and analysis. The Fund may actively rotate sector exposure based on its assessment of relative value. The Fund engages in active and frequent trading of its portfolio securities.

The Fund may sell a security when the Fund believes the security is less likely to benefit from the current market and economic environment, shows signs of deteriorating fundamentals, or has reached its valuation target, among other reasons. The Fund seeks to remain fully invested in accordance with its investment objective. The Fund may, however, deviate entirely from the investment strategy described above for temporary defensive purposes. The Fund may miss certain investment opportunities if defensive strategies are used and thus may not achieve its investment objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- Commercial mortgage-backed securities risk Commercial mortgage-backed securities include securities that reflect an interest in, and are secured by, mortgage loans on commercial real property. Many of the risks of investing in commercial mortgage-backed securities reflect the risks of investing in the real estate securing the underlying mortgage loans. These risks reflect the effects of local and other economic conditions on real estate markets, the ability of tenants to make loan payments, and the ability of a property to attract and retain tenants. Commercial mortgage-backed securities may be less liquid and exhibit greater price volatility than other types of mortgage- or asset-backed securities.

- Convertible securities risk Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- TIPS and inflation-linked bonds risk The value of inflation-protected securities generally fluctuates in response to changes in real interest rates, which are tied to the relationship between nominal interest rates and the rate of inflation. As a result, if inflation rates were to rise at a faster rate than nominal rates, real interest rates might decline, leading to an increase in the value of inflation-protected securities. In contrast, if nominal interest rates increased at a faster rate than inflation, real interest rates might rise, leading to a decrease in the value of inflation-protected securities.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Senior loans risk The senior loans in which the Fund invests are usually rated below investment grade. The amount of public information with respect to loans may be less extensive than that available for registered or exchange listed securities. An economic downturn generally leads to a higher non-payment rate, and a senior loan may lose significant value before a default occurs. A secured senior loan may not be adequately collateralized. Moreover, any specific collateral used to secure a senior loan may decline in value or become illiquid, which would adversely affect the senior loan's value.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. Performance for the Fund has not been included because the Fund commenced operations on the date of this Prospectus. Performance, which provides some indication of the risks of investing in the Fund, will be available once the Fund has completed one full calendar year of operations.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

JNL/Mellon Index 5 Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.00%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.06%	
Acquired Fund Fees and Expenses ²	0.27%	
Total Annual Fund Operating Expenses	0.63%	

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/Mellon Index 5 Fund Class A			
1 year	3 years	5 years	10 years
\$64	\$202	\$351	\$786

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	13%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of the following Funds ("Underlying Funds"):

- 20% in the JNL/Mellon S&P 500 Index Fund;
- 20% in the JNL/Mellon S&P 400 MidCap Index Fund;
- 20% in the JNL/Mellon Small Cap Index Fund;
- 20% in the JNL/Mellon International Index Fund; and
- 20% in the JNL/Mellon Bond Index Fund.

Under all market conditions, the Fund seeks to maintain the aforementioned target weights to the Underlying Funds, although market movements may result in some variance around the target weights. The daily flows in and out of the Fund are allocated in a manner to help minimize dispersion from the target weights of the Underlying Funds.

Some of the Underlying Funds may utilize a number of derivatives in order to execute their investment strategy, although derivatives are not utilized as a primary strategy. Some of the Underlying Funds, particularly the JNL/Mellon International Index Fund, will hold a significant amount of foreign securities in order to execute their investment strategy.

The investment policies of the Underlying Funds are described elsewhere in this Prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such
 factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate
 mix of asset classes of Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in
 market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's/Underlying Fund's shares, changes in the composition of the index, and the Fund's/Underlying Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The

value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

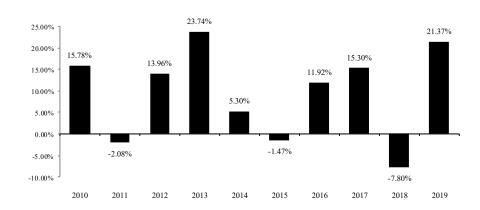

Effective June 24, 2019, the Fund was combined with the JNL/Mellon Capital 10 x 10 Fund (the "Acquired Fund") with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Aggressive Index with the Morningstar Moderately Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 20% S&P 500 Index, 20% S&P Midcap 400 Index, 20% S&P SmallCap 600 Index, 20% MSCI EAFE Index (Net), 20% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

JNL/Mellon Emerging Markets Index Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to track the performance of a benchmark index that measures the investment return of stocks issued by companies located in emerging market countries.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses			
(Expenses that you pay each year as a percentage of the value of your investment)			
	Class A		
Management Fee	0.25%		
Distribution and/or Service (12b-1) Fees	0.30%		
Other Expenses ¹	0.18%		
Total Annual Fund Operating Expenses	0.73%		

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Mellon Emerging Markets Index Fund Class A			
1 year	3 years	5 years	10 years
\$75	\$233	\$406	\$906

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	12%

Principal Investment Strategies. The Fund seeks to invest under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in securities included in the MSCI Emerging Markets Index ("Index"), including depositary receipts representing securities of the Index; which may be in the form of American Depositary receipts ("ADRs"), Global Depositary receipts ("GDRs") and European Depositary receipts ("EDRs").

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through statistical procedures. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the performance of the Index by investing all or substantially all of its assets in the securities that comprise the Index. Indexing may offer a cost-effective investment approach to gaining diversified market exposure, over the long-term.

When attempting to replicate the Index, portfolio turnover is typically limited to what the Index adds and deletes, contract owner contributions and withdrawals, fund of fund purchases and redemptions, and reinvestment income. The replicated portfolio does not require rebalancing as a result of market movement. It is rebalanced automatically with the change in share price.

The Fund will use to a significant degree derivative instruments, such as options, futures, and options on futures (including those relating to securities, indexes, foreign currencies and interest rates), forward contracts, swaps and hybrid instruments (typically structured notes), as a substitute for investing directly in equities, bonds and currencies in connection with its investment strategy. The Fund also may use such derivatives as part of a hedging strategy or for other purposes related to the management of the Fund. Derivatives may be entered into on established exchanges or through privately negotiated transactions referred to as over-the-counter derivatives. The Fund also may purchase or sell securities on a forward commitment (including "TBA" (to be announced) basis). These transactions involve a commitment by the Fund to purchase or sell particular securities with payment and delivery taking place at a future date and permit the Fund to lock in a price or yield on a security it owns or intends to purchase, regardless of future changes in interest rates or market conditions.

The Fund also may invest in derivatives securities to manage cash flows and equitize dividend accruals.

In addition, the Fund may also invest in exchange-traded funds ("ETFs"). ETFs may be used in the Fund to invest cash until such time as the Fund purchases local securities. ETFs may also be used to gain exposure to local markets that may be closed, or that are expensive or difficult to trade in local shares.

The Fund may concentrate its investments in an industry or group of industries to the extent that the Index the Fund is designed to track is also so concentrated.

As of the date of this prospectus, the countries represented by the Index include: United Arab Emirates, Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, Indonesia, India, South Korea, Mexico, Malaysia, Pakistan, Peru, Philippines, Poland, Qatar, Russia, Taiwan, Thailand, Turkey, and South Africa.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

• Emerging markets and less developed countries risk – Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or

other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- China risk The Chinese economy is generally considered an emerging market and can be significantly affected by economic and political conditions and policy in China and surrounding Asian countries. A relatively small number of Chinese companies represents a large portion of China's total market and thus may be more sensitive to adverse political or economic circumstances and market movements. The economy of China differs, often unfavorably, from the U.S. economy in such respects as structure, general development, government involvement, wealth distribution, rate of inflation, growth rate, allocation of resources and capital reinvestment, among others. Under China's political and economic system, the central government has historically exercised substantial control over virtually every sector of the Chinese economy through administrative regulation and/or state ownership. In addition, expropriation, including nationalization, confiscatory taxation, political, economic or social instability or other developments could adversely affect and significantly diminish the values of the Chinese companies in which the Fund invests. The Chinese securities markets are subject to more frequent trading halts and low trading volume, resulting in substantially less liquidity and greater price volatility. These and other factors could have a negative impact on the Fund's performance and increase the volatility of an investment in the Fund.
- Russia investment risk A Fund may invest a portion of its assets in securities issued by companies located in Russia. Because of the recent formation of the Russian securities markets as well as the underdeveloped state of Russia's banking system, settlement, clearing and registration of securities transactions are subject to significant risks. With the implementation of the National Settlement Depository ("NSD") in Russia as a recognized central securities depository, title to Russian equity securities is now based on the records of the NSD and not the registrars. Although the implementation of the NSD is generally expected to decrease the risk of loss in connection with recording and transferring title to securities, issues resulting in loss still might occur. In addition, issuers and registrars are still prominent in the validation and approval of documentation requirements for corporate action processing in Russia. Because the documentation requirements and approval criteria vary between registrars and/or issuers, there remain unclear and inconsistent market standards in the Russian market with respect to the completion and submission of corporate action elections. To the extent that the Fund suffers a loss relating to title or corporate actions relating to its portfolio securities, it may be difficult for the Fund to enforce its rights or otherwise remedy the loss.

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures

contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

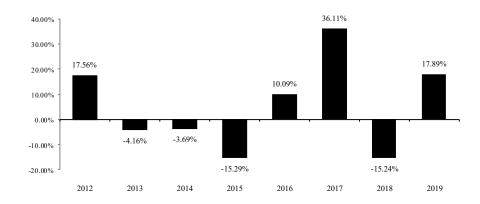

- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

Class A

Best Quarter (ended 3/31/2012): 13.44%; Worst Quarter (ended 9/30/2015): -17.45%

Average Annual Total Returns as of 12/31/2019

	1 year		Life of Fund (August 29, 2011)

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/Mellon Equity Income Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek total return (consisting of capital appreciation and income).

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.45%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.16%
Total Annual Fund Operating Expenses	0.91%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Mellon Equity Income Fund Class A			
1 year	3 years	5 years	10 years
\$93	\$290	\$504	\$1,120

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	58%

Principal Investment Strategies. Under normal market conditions, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities. The Fund seeks to focus on dividend-paying stocks and other investments and investment techniques that provide income, including covered call strategies. Mellon Investments Corporation, the Fund's sub-adviser (the "Sub-Adviser"), chooses stocks through a disciplined investment process that combines computer modeling techniques, fundamental analysis, and risk management. The Fund will emphasize those stocks with value characteristics, although it also may purchase growth stocks. The Sub-Adviser's investment process is designed to provide investors with investment exposure to sector weightings and risk characteristics generally similar to those of the S&P 500 Value Index.

The Fund's equity investments may include common stocks, preferred stocks, convertible securities, and American Depositary Receipts ("ADRs"), including those purchased in initial public offerings. The Fund may also invest in fixed income securities and money market instruments.

The Fund may, but is not required to, use derivatives, such as options, futures, and options on futures (including those relating to stocks, indices, and interest rates), as a substitute for investing directly in an underlying asset, to increase returns or income, or as a part of a hedging strategy.

The Fund may invest in securities issued by companies in the financial services sector.

The Fund primarily invests in securities of U.S. companies and does not currently intend to invest more than 15% in foreign securities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of a security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.

- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Convertible securities risk Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- Options risk If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Investments in IPOs risk IPOs issued by unseasoned companies with little or no operating history are risky and highly volatile.
- *Managed portfolio risk* As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market

changes), financial markets may fluctuate or overall prices may decline, or the Fund's Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

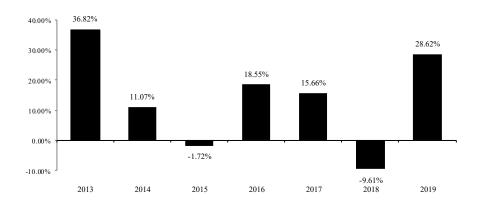

Effective June 24, 2019, the Fund was combined with JNL/Epoch Global Shareholder Yield Fund (the "Acquired Fund"), with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

The performance data includes the performance of the JNL/Mellon Equity Income Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Effective October 14, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the S&P 500 Value Index with the MSCI USA Value Index as the Fund's primary benchmark.

Annual Total Returns as of December 31

Class A

Best Quarter (ended 3/31/2013): 11.59%; Worst Quarter (ended 12/31/2018): -14.16%

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

JNL/Mellon MSCI KLD 400 Social Index Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek to track the investment results of an index composed of U.S. companies that have positive environmental, social and governance characteristics as identified by the index provider.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses	
(Expenses that you pay each year as a percentage of the value of your in	vestment)
	Class A
Management Fee	0.25%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.20%
Total Annual Fund Operating Expenses	0.75%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Mellon MSCI KLD 400 Social Index Fund Class A			
1 year	3 years	5 years	10 years
\$77	\$240	\$417	\$930

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	12%

Principal Investment Strategies. The Fund seeks to track the investment results of the MSCI KLD 400 Social Index (the "Index"), which is a free float-adjusted market capitalization index designed to target U.S. companies that have positive environmental, social and governance ("ESG") characteristics. As of December 31, 2019, the Index consisted of 402 companies identified by MSCI Inc. (the "Index Provider" or "MSCI") from the universe of companies included in the MSCI USA IMI Index, which targets 99% of the market coverage of stocks that are listed for trading on the New York Stock Exchange ("NYSE"), NASDAQ Stock Market and the NYSE MKT LLC. MSCI analyzes each eligible company's ESG performance using proprietary ratings covering ESG criteria. The ratings identify the following six to ten issues: climate change, natural resources, pollution and waste, environmental opportunities, human capital, product liability, stakeholder opposition, social opportunities, corporate governance, and corporate behavior. The ESG criteria includes, but is not limited to, a company's level of exposure relating to a material issue and the company's management process of that issue. To assess a company's exposure to and management of ESG risks and opportunities, the MSCI collects data from at a segment or geographic level from academic, government datasets; publicly filed company reports; government databases; media; and similar sources. Companies that MSCI determines have significant involvement in the following businesses are not eligible for the Index: alcohol, tobacco, gambling, civilian firearms, nuclear power, military weapons, adult entertainment and genetically modified organisms. The Index may include large-, mid- or small capitalization companies. Components of the Index primarily include consumer discretionary, healthcare and information technology companies. The components of the Index, and the degree to which these components represent certain industries, are likely to change over time.

Mellon Investments Corporation ("Sub-Adviser") uses a "passive" or indexing approach to try to achieve the Fund's investment objective. Unlike many investment companies, the Fund does not try to "beat" the index it tracks and does not seek temporary defensive positions when markets decline or appear overvalued.

The Fund does not employ traditional methods of active investment management, such as actively buying and selling bonds based upon interest rate bets or sector rotation. Indexing may offer a cost-effective approach to gaining diversified market exposure over the long-term.

The Fund generally invests at least 90% of its assets in securities of the Index and in depositary receipts representing securities of the Index. The Fund may invest the remainder of its assets in certain futures, options and swap contracts, cash and cash equivalents, including shares of money market funds advised by the Sub-Adviser or its affiliates, as well as in securities not included in the Index, but which the Sub-Adviser believes will help the Fund track the Index. The Fund seeks to track the investment results of the Index before fees and expenses of the Fund.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may invest in exchange-traded funds ("ETFs") to assist with fund rebalances and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund seeks to track the investment results of the Index, which is a free float-adjusted market capitalization index designed to target U.S. companies that have ESG characteristics. The Fund's investments may be concentrated in certain industries to the extent such industries are represented in the Index.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

• ESG (Environmental, Social & Governance) investment strategy risk – The Fund's ESG investment strategy limits the types and number of investment opportunities available to the Fund and, as a result, the Fund may underperform other funds that do not have an ESG focus. The Fund's ESG investment strategy may result in the Fund investing in securities or industry sectors that

underperform the market as a whole or underperform other funds screened for ESG standards. In addition, the Index Provider may be unsuccessful in creating an index composed of companies that exhibit positive ESG characteristics.

- License termination risk The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer,

such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.

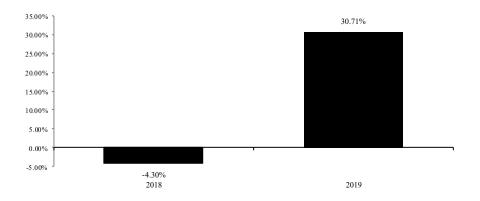

- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to track the performance of the S&P 500[®] Index. The Fund is constructed to mirror the S&P 500 Index to provide long-term capital growth.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.11%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.12%	
Total Annual Fund Operating Expenses	0.53%	

¹ "Other Expenses" include an Administrative Fee of 0.09% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	JNL/Mellon S&P 500 Index Fund Class A			
Ī	1 year	3 years	5 years	10 years
Ī	\$54	\$170	\$296	\$665

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	5%

Principal Investment Strategies. The Fund seeks to invest under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the S&P 500 Index in proportion to their market capitalization weighting in the S&P 500 Index. The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the S&P 500 Index through statistical procedures. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the S&P 500 Index by investing all or substantially all of its assets in the stocks that make up the S&P 500 Index. As of December 31, 2019, the market capitalization range of the S&P 500 Index is \$2.90 billion to \$1.30 trillion. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term.

When attempting to replicate a capitalization-weighted index such as the S&P 500 Index, portfolio turnover is reduced to what the index adds and deletes, contract owner contributions and withdrawals, and reinvestment income. The replicated portfolio does not require rebalancing as a result of market movement. The Fund is managed to reflect the composition of the Index and will rebalance as needed to reflect changes in the composition of the Index.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- License termination risk The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.

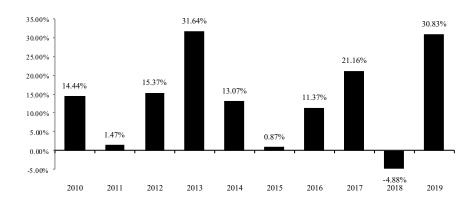

- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts.

You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to track the performance of the S&P MidCap 400 Index. The Fund is constructed to mirror the index to provide long-term capital growth by investing in equity securities of medium capitalization-weighted domestic corporations.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

TAT /	A 1	1 1	1
INOL	App]	ucar	ne
	- PP		

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.14%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.12%	
Total Annual Fund Operating Expenses	0.56%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Mellon S&P 400 MidCap Index Fund Class A			
1 year	3 years	5 years	10 years
\$57	\$179	\$313	\$701

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	18%

Principal Investment Strategies. The Fund invests, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the S&P MidCap 400 Index in proportion to their market capitalization weighting in the S&P MidCap 400 Index. The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the S&P MidCap 400 Index through statistical procedures. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the S&P MidCap 400 Index by investing all or substantially all of its assets in the stocks that make up the S&P MidCap 400 Index. As of December 31, 2019, the market capitalization range of the S&P MidCap 400 Index is \$1.10 billion to \$12.64 billion. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long term.

When attempting to replicate a capitalization-weighted index such as the S&P MidCap 400 Index, portfolio turnover is reduced to what the index adds and deletes, contract owner contributions and withdrawals, and reinvestment of income. The replicated portfolio does not require rebalancing as a result of market movement. It is rebalanced automatically with the change in share prices of the securities owned. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- License termination risk The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.

- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

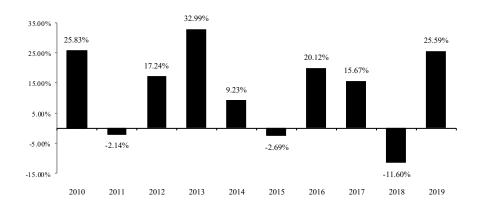

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 27, 2020, the Fund will be combined with JNL/S&P Mid 3 Fund (the "Acquired Fund"), with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Investment Objective. The investment objective of the Fund is to track the performance of the S&P SmallCap 600 Index. The Fund is constructed to mirror the index to provide long-term growth of capital by investing in equity securities of small- to mid-size domestic companies.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.14%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.13%	
Total Annual Fund Operating Expenses	0.57%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Mellon Small Cap Index Fund Class A			
1 year	3 years	5 years	10 years
\$58	\$183	\$318	\$714

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	29%

Principal Investment Strategies. The Fund invests, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the S&P SmallCap 600 Index in proportion to their market capitalization weighting in the S&P SmallCap 600 Index. The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the S&P SmallCap 600 Index through statistical procedures. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the S&P SmallCap 600 Index by investing all or substantially all of its assets in the stocks that make up the S&P SmallCap 600 Index. As of December 31, 2019, the market capitalization range for the S&P SmallCap 600 Index was \$97.88 million to \$6.79 billion.

When attempting to replicate a capitalization-weighted index such as the S&P SmallCap 600 Index, portfolio turnover is reduced to what the index adds and deletes, contract owner contributions and withdrawals, and reinvestment of income. The replicated portfolio does not require rebalancing as a result of market movement. It is rebalanced automatically with the change in share prices of the securities owned. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may lend its securities to increase its income.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- License termination risk The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or

improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.

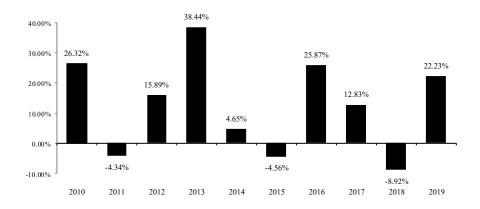

- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts.

You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to track the performance of the Morgan Stanley Capital International ("MSCI") Europe Australia Far East ("EAFE") Index. The Fund is constructed to mirror the index to provide long-term capital growth by investing in international equity securities attempting to match the characteristics of each country within the index.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your in	vestment)
	Class A
Management Fee	0.16%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.17%
Total Annual Fund Operating Expenses	0.63%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Mellon International Index Fund Class A			
1 year	3 years	5 years	10 years
\$64	\$202	\$351	\$786

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	4%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the MSCI EAFE Index or derivative securities economically related to the MSCI EAFE Index. The Fund seeks to track the performance and characteristics of the MSCI EAFE Index.

To implement this strategy, the Fund may invest up to 50% of its net asset value in financial futures, a type of derivative, to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. In addition, the Fund may use foreign currency forward contracts, a type of derivative, to maintain the approximate currency exposure of the MSCI EAFE Index. The Fund's use of financial futures and foreign currency forward contracts is intended to assist replicating the investment performance of the Index.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the MSCI EAFE Index through statistical procedures. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective approach to gaining diversified market exposure over the long term. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other

foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

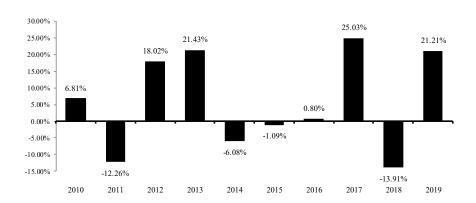

- License termination risk The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use
 techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market
 decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively
 managed funds that realign their portfolios more frequently based on the real-time market trends.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Mellon Bond Index Fund Class A			
1 year	3 years	5 years	10 years
\$58	\$183	\$318	\$714

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	62%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in fixed-income securities that seek to track the performance and certain characteristics of the Bloomberg Barclays U.S. Aggregate Bond Index ("Index") that Mellon Investments Corporation ("Mellon" or "Sub-Adviser") believes to be important. Research and experience indicate that it is impractical to attempt to fully replicate most broad fixed-income securities market indices. The Index includes thousands of issues, many of which may be illiquid and unavailable in the secondary markets. Additionally, reinvestment of cash flows would be costly in a full replication environment, as it would entail trading many issues in uneven amounts. Given these difficulties, the Sub-Adviser utilizes a statistical sampling approach that combines analysis and the experience and judgment of its investment professionals.

Through the statistical sampling approach, the Sub-Adviser selects what it believes is a representative basket of securities in order to match the important risk characteristics of the Index. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through statistical procedures. The Fund does not employ traditional methods of active investment management, such as actively buying and selling bonds based upon interest rate bets or sector rotation. Indexing may offer a cost-effective approach to gaining diversified market exposure over the long-term.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *Credit risk* The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-

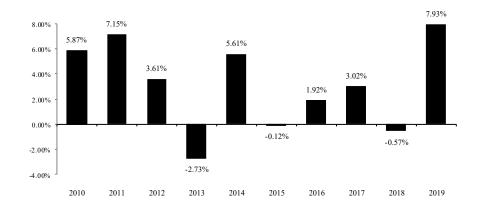

- income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- Extension risk When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- *Portfolio turnover risk* Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

JNL/Mellon DowSM Index Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is total return through a combination of capital appreciation and dividend income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	2%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the thirty securities which comprise the Dow Jones Industrial Average ("DJIA"), with the weight of each security in the Fund substantially corresponding to the weight of such security in the DJIA. The thirty securities are adjusted from time to time to conform to periodic changes to the identity and/or relative weightings in the DJIA.

Certain provisions of the Investment Company Act of 1940, as amended (the "1940 Act") may limit the ability of the Fund to invest in certain securities beyond certain percentage limitations.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may invest in securities issued by companies in the financial services sector.

The Fund is "non-diversified" under the 1940 Act and may invest more of its assets in fewer issuers than "diversified" mutual funds.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.
- License termination risk The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or

investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Limited management, trading cost and rebalance risk Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

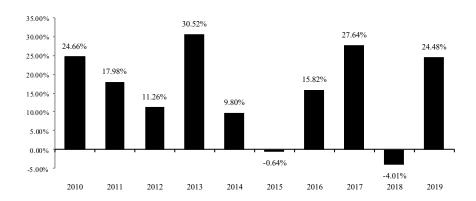

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the Fund, then a series of the JNL Variable Fund LLC for periods before the Fund's registration statement became effective.

Effective April 27, 2020, the Fund will be combined with JNL/Mellon S&P 1500 Value Index Fund (the "Acquired Fund"), a series of JNL Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to track the performance of the MSCI World Index. The Fund is constructed to mirror the index to provide long-term capital growth by investing in international equity securities attempting to match the characteristics of each country within the index.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

JNL/Mellon MSCI World Index Fund Class A					
1 year 3 years 5 years 10 years					
\$68 \$214 \$373 \$835					

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	4%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the MSCI World Index or derivative securities economically related to the MSCI World Index. The Fund seeks to track the performance and characteristics of the MSCI World Index.

To implement this strategy, the Fund may invest up to 50% of its net asset value in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index. In addition, the Fund may use foreign currency forward contracts, a type of derivative, to maintain the approximate currency exposure of the MSCI World Index.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through statistical procedures. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. Indexing may offer a cost-effective approach to gaining diversified market exposure over the long term. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the MSCI World Index.

The Fund may obtain exposure to non-U.S. companies through investment in depositary receipts such as American, Global, and European Depositary Receipts (ADRs, GDRs, and EDRs).

Certain provisions of the Investment Company Act of 1940, as amended (the "1940 Act"), and the Internal Revenue Code of 1986, as amended, may limit the ability of the Fund to invest in certain securities beyond certain percentage limitations.

The Fund may invest in securities issued by companies in the financial services sector.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- *License termination risk* The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the

licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.

- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

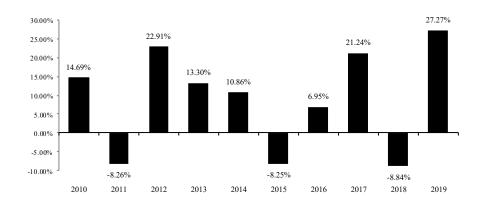

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance information prior to September 25, 2017 shown reflects the Fund's results when managed by the sub-adviser utilizing a different investment strategy. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/Mellon MSCI World Index Fund, then a series of the JNL Variable Fund LLC, for periods before the Fund's registration statement became effective.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

JNL/Mellon Nasdaq[®] 100 Index Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is total return.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

ſ	\$68	\$214	\$373	\$835

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	10%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in the securities which comprise the NASDAQ 100 Index® ("Index"). The Fund seeks to invest under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the Index in proportion to their market capitalization weighting in the Index.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through statistical procedures. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the securities that make up the Index. The Index includes 100 of the largest non-financial domestic and international companies listed on the Nasdaq Stock Market. The Index reflects companies across high-growth industry groups including computer hardware and software, telecommunications, retail/wholesale trade and biotechnology.

Certain provisions of the Investment Company Act of 1940, as amended (the "1940 Act") may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of assets, consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest in the securities of non-U.S. issuers.

The Fund is "non-diversified" under the 1940 Act and may invest more of its assets in fewer issuers than "diversified" mutual funds.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset,

interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The performance information shown prior to April 25, 2016 reflects the Fund's results when utilizing a different investment strategy. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

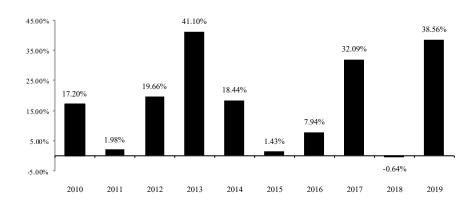

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the Fund, then a series of the JNL Variable Fund LLC for periods before the Fund's registration statement became effective.

Effective April 27, 2020, the Fund will be combined with JNL/Mellon S&P 1500 Growth Index Fund (the "Acquired Fund"), a series of JNL Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

JNL/Mellon Communication Services Sector Fund Class A			
1 year	3 years	5 years	10 years
\$68	\$214	\$373	\$835

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	54%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the MSCI USA IMI Communication Services Index ("Index") in proportion to their market capitalization weighting in the Index.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through statistical procedures. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. Indexing may eliminate the chance that a Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection. As of December 31, 2019, the market capitalization range of the Index was \$684.24 million to \$449.41 billion.

The Fund's ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index.

Certain provisions of the Investment Company Act of 1940, as amended (the "1940 Act") may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may lend its securities to increase its income.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is "non-diversified" under the 1940 Act and may invest more of its assets in fewer issuers than "diversified" mutual funds.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.

- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use
 techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market
 decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively
 managed funds that realign their portfolios more frequently based on the real-time market trends.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements.

This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

• Portfolio turnover risk – Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

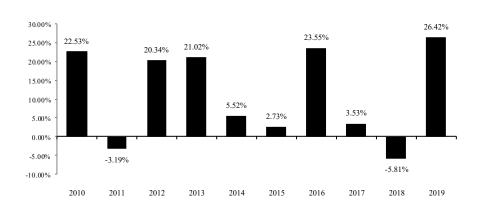

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/Mellon Communication Services Sector Fund, then a series of the JNL Variable Fund LLC, for periods before the Fund's registration statement became effective.

Effective October 14, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the MSCI USA IMI Communication Services 25/50 Index with the MSCI USA IMI Communication Services Index as the Fund's primary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

JNL/Mellon Consumer Discretionary Sector Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The objective of the Fund is total return through capital appreciation and dividend income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.18%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Total Annual Fund Operating Expenses	0.64%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

JNL/Mellon Consumer Discretionary Sector Fund Class A			
1 year	3 years	5 years	10 years
\$65	\$205	\$357	\$798

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	4%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its (net assets plus the amount of any borrowings made for investment purposes) assets in the stocks in the MSCI USA IMI Consumer Discretionary Index ("Index") in proportion to their market capitalization weighting in the Index.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through statistical procedures. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. Indexing may eliminate the chance that a Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection. As of December 31, 2019, the market capitalization range of the Index was \$122.57 million to \$776.94 billion.

The Fund's ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index.

Certain provisions of the Investment Company Act of 1940, as amended (the "1940 Act") may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is "non-diversified" under the 1940 Act and may invest more of its assets in fewer issuers than "diversified" mutual funds.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Non-diversification risk* The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the

market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its

investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

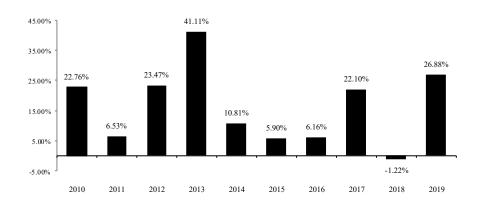

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/Mellon Consumer Discretionary Sector Fund, then a series of the JNL Variable Fund LLC, for periods before the Fund's registration statement became effective.

Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The objective of the Fund is total return through capital appreciation and dividend income.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.22%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.17%	
Total Annual Fund Operating Expenses	0.69%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Mellon Consumer Staples Sector Fund Class A					
1 year 3 years 5 years 10 years					
\$70 \$221 \$384 \$859					

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	25%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the MSCI USA IMI Consumer Staples Index ("Index") in proportion to their market capitalization weighting in the Index. The consumer staples sector currently consists of companies representing food and staples retailing, food, beverage, and tobacco companies, and household and personal products companies. The Fund may concentrate in certain industries in the consumer staples sector to the extent such industries are represented in the Index. The Index measures the performance of the consumer staples sector of the U.S. equity market. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Index. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. Indexing may eliminate the chance that the Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection. As of December 31, 2019, the market capitalization range of the Index was \$166.81 million to \$312.58 billion.

The Fund's ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index.

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act"), may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is "non-diversified" under the 1940 Act and may invest more of its assets in fewer issuers than "diversified" mutual funds.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage

risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.

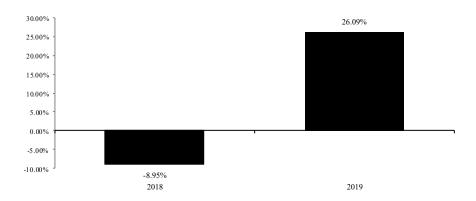

- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/Mellon Energy Sector Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The objective of the Fund is total return through capital appreciation and dividend income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

\$65	\$205	\$357	\$798	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	8%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the MSCI USA IMI Energy Index ("Index") in proportion to their market capitalization weighting in the Index.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through statistical procedures. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. Indexing may eliminate the chance that a Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection. As of December 31, 2019, the market capitalization range of the Index was \$122.96 million to \$295.25 billion.

The Fund's ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index.

Certain provisions of the Investment Company Act of 1940, as amended (the "1940 Act") may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is "non-diversified" under the 1940 Act and may invest more of its assets in fewer issuers than "diversified" mutual funds.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Non-diversification risk* The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the

market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its

investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

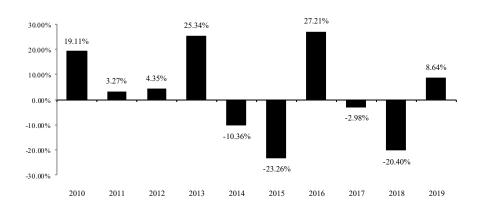

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/Mellon Energy Sector Fund, then a series of the JNL Variable Fund LLC, for periods before the Fund's registration statement became effective.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

1 year	3 years	5 years	10 years
\$65	\$205	\$357	\$798

Period	
1/1/2019 - 12/31/2019	4%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the securities in the MSCI USA IMI Financials Index ("Index") in proportion to their market capitalization weighting in the Index.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through statistical procedures. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. Indexing may eliminate the chance that a Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection. As of December 31, 2019, the market capitalization range of the Index was \$109.87 million to \$445.73 billion.

The Fund's ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index.

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act") and the Bank Holding Company Act of 1953, as amended, may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is "non-diversified" under the 1940 Act and may invest more of its assets in fewer issuers than "diversified" mutual funds.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or

investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.

- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities

and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

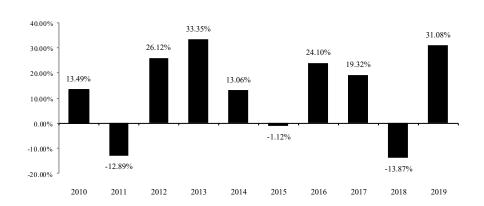

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/Mellon Financial Sector Fund, then a series of the JNL Variable Fund LLC, for periods before the Fund's registration statement became effective.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Mellon Healthcare Sector Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The objective of the Fund is total return through capital appreciation and dividend income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.17%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Total Annual Fund Operating Expenses	0.63%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Mellon Healthcare Sector Fund Class A			
1 year	3 years	5 years	10 years
\$64	\$202	\$351	\$786

Period	
1/1/2019 - 12/31/2019	5%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the securities in the MSCI USA IMI Health Care Index ("Index") in proportion to their market capitalization weighting in the Index.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through statistical procedures. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. Indexing may eliminate the chance that a Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection. As of December 31, 2019, the market capitalization range of the Index was \$41.02 million to \$384.98 billion.

The Fund's ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index.

Certain provisions of the Investment Company Act of 1940, as amended (the "1940 Act") may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is "non-diversified" under the 1940 Act and may invest more of its assets in fewer issuers than "diversified" mutual funds.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the

market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its

investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

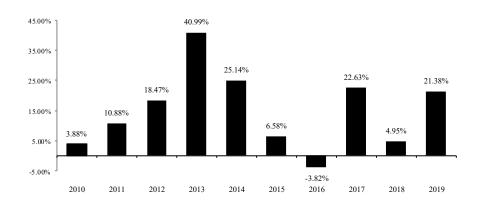

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/Mellon Healthcare Sector Fund, then a series of the JNL Variable Fund LLC, for periods before the Fund's registration statement became effective.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Mellon Industrials Sector Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The objective of the Fund is total return through capital appreciation and dividend income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

nnual Fund Operating Expenses Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.23%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.17%	
Total Annual Fund Operating Expenses	0.70%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Mellon Industrials Sector Fund Class A			
1 year	3 years	5 years	10 years
\$72	\$224	\$390	\$871

Period	
1/1/2019 - 12/31/2019	48%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the MSCI USA IMI Industrials Index ("Index") in proportion to their market capitalization weighting in the Index. The Fund may concentrate in certain industries in the industrials sector to the extent such industries are represented in the Index. The Index measures the performance of the industrials sector of the U.S. equity market. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Index. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. Indexing may eliminate the chance that the Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection. As of December 31, 2019, the market capitalization range of the Index was \$155.18 million to \$174.14 billion.

The Fund's ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index.

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act"), may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis, currently quarterly, to reflect changes in the composition of the Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is "non-diversified" under the 1940 Act and may invest more of its assets in fewer issuers than "diversified" mutual funds.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Non-diversification risk* The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the

market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- *Portfolio turnover risk* Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or

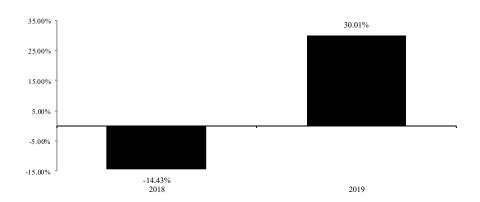

as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those

insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Mellon Information Technology Sector Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The objective of the Fund is total return through capital appreciation and dividend income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.17%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.17%
Total Annual Fund Operating Expenses	0.64%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Mellon Information Technology Sector Fund Class A			
1 year	3 years	5 years	10 years
\$65	\$205	\$357	\$798

Period	
1/1/2019 - 12/31/2019	7%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks in the MSCI USA IMI Information Technology Index ("Index") in proportion to their market capitalization weighting in the Index.

The Fund employs a passive investment approach, called indexing, which attempts to replicate the investment performance of the Index through statistical procedures. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. Indexing may eliminate the chance that a Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection. As of December 31, 2019, the market capitalization range of the Index was \$120.29 million to \$1.327 trillion.

The Fund's ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index.

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act") may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is "non-diversified" under the 1940 Act and may invest more of its assets in fewer issuers than "diversified" mutual funds.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- *Non-diversification risk* The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the

market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its

investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

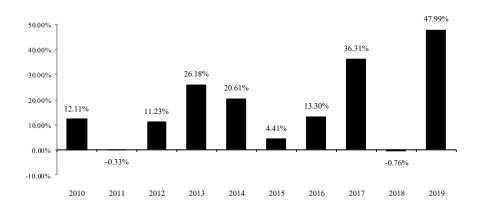

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/Mellon Information Technology Sector Fund, then a series of the JNL Variable Fund LLC, for periods before the Fund's registration statement became effective.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Mellon Materials Sector Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The objective of the Fund is total return through capital appreciation and dividend income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.24%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.17%
Total Annual Fund Operating Expenses	0.71%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	JNL/Mellon Materials Sector Fund Class A				
Γ	1 year	3 years	5 years	10 years	
Γ	\$73	\$227	\$395	\$883	

Period	
1/1/2019 - 12/31/2019	50%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the MSCI USA IMI Materials Index ("Index") in proportion to their market capitalization weighting in the Index. The Fund may concentrate in certain industries in the materials sector to the extent such industries are represented in the Index. The Index measures the performance of the materials sector of the U.S. equity market. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Index. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. Indexing may eliminate the chance that the Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection. As of December 31, 2019, the market capitalization range of the Index was \$159.22 million to \$115.09 billion.

The Fund's ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index.

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act"), may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is "non-diversified" under the 1940 Act and may invest more of its assets in fewer issuers than "diversified" mutual funds.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the

market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

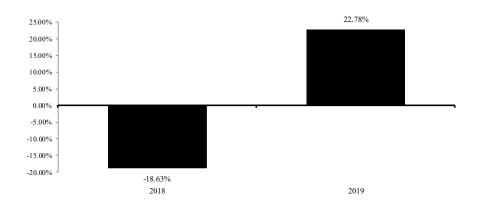

• Portfolio turnover risk – Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Mellon Real Estate Sector Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The objective of the Fund is total return through capital appreciation and dividend income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.21%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.17%	
Total Annual Fund Operating Expenses	0.68%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Mellon Real Estate Sector Fund Class A			
1 year	3 years	5 years	10 years
\$69	\$218	\$379	\$847

Period	
1/1/2019 - 12/31/2019	36%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the MSCI USA IMI Real Estate Index ("Index") in proportion to their market capitalization weighting in the Index. The Fund may concentrate in certain industries in the real estate sector to the extent such industries are represented in the Index. The Index measures the performance of the real estate sector of the U.S. equity market. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Index. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. Indexing may eliminate the chance that the Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection. As of December 31, 2019, the market capitalization range of the Index was \$123.70 million to \$101.74 billion.

The Fund's ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index.

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act"), may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund is "non-diversified" under the 1940 Act and may invest more of its assets in fewer issuers than "diversified" mutual funds.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the

market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

- Real estate investment risk Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

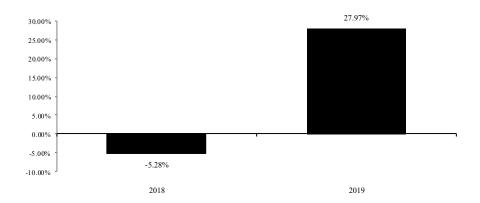

- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or
 in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction
 costs, which may reduce performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Mellon Utilities Sector Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The objective of the Fund is total return through capital appreciation and dividend income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.20%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Total Annual Fund Operating Expenses	0.66%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	JNL/Mellon Utilities Sector Fund Class A				
ĺ	1 year	3 years	5 years	10 years	
ĺ	\$67	\$211	\$368	\$822	

Period	
1/1/2019 - 12/31/2019	28%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the stocks included in the MSCI USA IMI Utilities Index ("Index") in proportion to their market capitalization weighting in the Index. The Fund may concentrate in certain industries in the utilities sector to the extent such industries are represented in the Index. The Index measures the performance of the utilities sector of the U.S. equity market. The Fund seeks to achieve its objective by utilizing a replication investment approach, called indexing, which attempts to replicate the investment performance of the Index. Indexing may offer a cost-effective investment approach to gaining sector exposure over the long term. Indexing may eliminate the chance that the Fund will outperform the Index, but also may reduce some of the risk of active management, such as poor security selection. As of December 31, 2019, the market capitalization range of the Index was \$442.89 million to \$116.02 billion.

The Fund's ability to achieve significant correlation with the performance of the Index may be affected by changes in shareholder flows, securities markets and changes in the composition of the Index.

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act") and the Internal Revenue Code of 1986, as amended, may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may also invest in a combination of exchange-traded funds ("ETFs") and cash to maintain correlation to its index, to assist with index rebalances, and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund is "non-diversified" under the 1940 Act, as amended, and may invest more of its assets in fewer issuers than "diversified" mutual funds.

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the

market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

- Government regulatory risk Certain industries or sectors, including, but not limited to, real estate, financial services, utilities, oil and natural gas exploration and production, and health care are subject to increased regulatory requirements. There can be no guarantee that companies in which the Fund invests will meet all applicable regulatory requirements. Certain companies could incur substantial fines and penalties for failing to meet government regulatory requirements. These requirements may also result in additional compliance expenses and costs. Such increased regulatory compliance costs could hurt a company's performance.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its

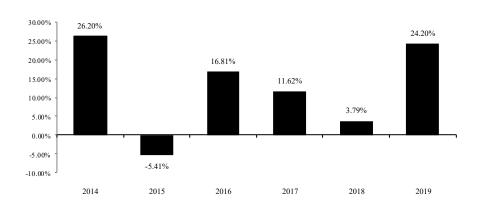

investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/MFS Mid Cap Value Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

nnual Fund Operating Expenses xpenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.55%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.11%	
Total Annual Fund Operating Expenses	0.96%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/MFS Mid Cap Value Fund Class A				
1 year	3 years	5 years	10 years	
\$98	\$306	\$531	\$1,178	

Period	
1/1/2019 - 12/31/2019	22%

Principal Investment Strategies. The Fund seeks to meet its objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in issuers with medium market capitalizations.

Massachusetts Financial Services Company ("Sub-Adviser" or "MFS") generally defines medium market capitalization issuers as issuers with market capitalizations similar to those of issuers included in the Russell Midcap® Value Index over the last 13 months at the time of purchase. As of December 31, 2019, the capitalization range of the Russell Midcap® Value Index was between \$472.52 billion and \$35.11 billion. Issuers whose market capitalizations fall outside this definition after purchase continue to be considered to have a medium market capitalization for purposes of the 80% policy.

MFS normally invests the Fund's assets primarily in equity securities. Equity securities include common stocks, equity interests in real estate investment trusts ("REITs"), and other securities that represent an ownership interest (or right to acquire an ownership interest) in a company or other issuer.

MFS focuses on investing the Fund's assets in the stocks of companies it believes are undervalued compared to their perceived worth (value companies). Value companies tend to have stock prices that are low relative to their earnings, dividends, assets, or other financial measures.

MFS may invest the Fund's assets in foreign securities.

MFS normally invests the Fund's assets across different industries and sectors, but MFS may invest a significant percentage of the Fund's assets in issuers in a single industry or sector.

MFS uses an active bottom-up investment approach to buying and selling investments for the Fund. Investments are selected primarily based on fundamental analysis of individual issuers and their potential in light of their financial condition, and market, economic, political, and regulatory conditions. Factors considered may include analysis of an issuer's earnings, cash flows, competitive position, and management ability. MFS may also consider the environmental, social, and governance (ESG) factors in its fundamental investment analysis. Quantitative screening tools that systematically evaluate an issuer's valuation, price and earnings momentum, earnings quality, and other factors may also be considered.

- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged

- and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Real estate investment risk Real estate is affected by general economic conditions and legal, cultural or technological developments. When growth is slowing, demand for property decreases and prices may decline, which could impact the value of mortgage-backed securities that may be held by the Fund. Real estate company share prices may drop because of the failure of borrowers to pay their loans and poor management.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.

• Accounting risk – The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to April 24, 2017, reflects the Fund's results when managed by the former sub-adviser, Goldman Sachs Assets Management, L.P. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

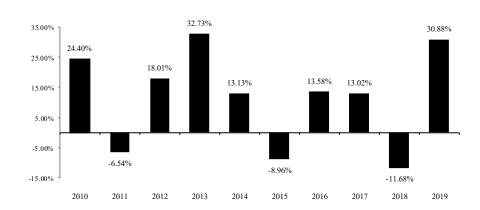

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective August 13, 2018, the Fund was combined with JNL/Invesco Mid Cap Value Fund with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the JNL/Invesco Mid Cap Value Fund.

Effective April 27, 2020, the Fund will be combined with JNL/PPM America Mid Cap Value Fund, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the JNL/PPM America Mid Cap Value Fund.

You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to provide total return by tracking the performance, net of expenses, of the Morningstar® Wide Moat Focus IndexSM.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees :)

(fees paid	directly f	from you	ur investment
Not Applic	able		

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.20%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.27%	
Total Annual Fund Operating Expenses	0.77%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Morningstar Wide Moat Index Fund Class A				
	1 year	3 years	5 years	10 years
	\$79	\$246	\$428	\$954

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	73%

Principal Investment Strategies. The Fund seeks to invest under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the securities in the Morningstar® Wide Moat Focus IndexSM ("Index"). The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term.

The Index is comprised of securities issued by companies that Morningstar, Inc. ("Morningstar") determines to have sustainable competitive advantages based on a proprietary methodology that considers quantitative and qualitative factors ("wide moat companies"). Wide moat companies are selected from the universe of companies represented in the Morningstar® US Market IndexSM, a broad market index. The Index targets a select group of wide moat companies: those that according to Morningstar's equity research team are attractively priced as of each biannual Index review.

Out of the companies in the Morningstar[®] US Market IndexSM that Morningstar determines are wide moat companies, Morningstar selects companies to be included in the Index as determined by the ratio of Morningstar's estimate of fair value of the issuer's common stock to the price. Morningstar's equity research fair value estimates are calculated using a standardized, proprietary valuation model. Wide moat companies are not limited by market capitalizations.

The Fund intends to hold the same number of securities as the Index. As of December 31, 2019, the Index included 49 securities of companies with a market capitalization range of between approximately \$1.7 billion to \$1.20 trillion and a weighted average market capitalization of \$143.5 billion. These amounts are subject to change. The Index is divided into two sub-portfolios and employs a staggered rebalance methodology: one sub-portfolio reconstitutes in December and June, the other in March and September.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may invest in exchange-traded funds ("ETFs") to assist with Fund rebalances and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

Mellon Investments Corporation, the Fund's sub-adviser (Sub-Adviser"), uses a "passive" or "indexing" approach to try to achieve the Fund's investment objective. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis.

The Fund may concentrate its investments in an industry or group of industries to the extent the Index that the Fund is designed to track is also concentrated.

The Fund is a "non-diversified" fund, as defined in the 1940 Act, and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

• Equity securities risk – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry,

such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- License termination risk The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

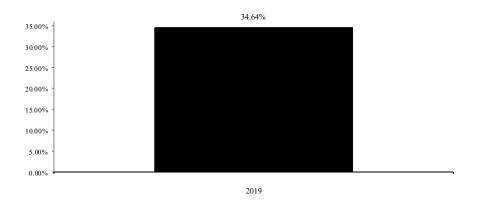

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 27, 2020, the Fund will be combined with the JNL/The London Company Focused U.S. Equity Fund (the "Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Summary Prospectus – April 27, 2020

JNL/Neuberger Berman Commodity Strategy Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek total return.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.45%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Acquired Fund Fees and Expenses ²	0.03%	
Total Annual Fund Operating Expenses	0.93%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/Neuberger Berman Commodity Strategy Fund Class A			
1 year	3 years	5 years	10 years
\$95	\$296	\$515	\$1,143

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	94%

Principal Investment Strategies. The Fund seeks to achieve its goal by investing under normal circumstances in commodity-linked derivative instruments and fixed-income instruments. Commodities are assets that have tangible properties, such as oil, natural gas, agricultural products or metals.

The Fund seeks to gain long and short exposure to the commodity markets by investing, directly or indirectly, in futures contracts on individual commodities and other commodity-linked derivative instruments. The performance of these commodity-linked derivative instruments is expected to correspond to the performance of the commodity underlying the derivative instrument, without requiring the Fund to invest directly in commodities.

Companies with similar characteristics may be grouped together in broad categories called sectors. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund.

Fund assets not invested in commodity-linked derivative instruments will be invested in fixed income securities, cash or cash equivalent instruments, or money market mutual funds.

The Fund may hold commodity-linked derivative instruments that provide leveraged exposure to commodities so that the Fund's investment exposure to commodities (through their use of commodity-linked derivative instruments) may, at times, equal or slightly exceed the Fund's net assets.

In managing the Fund's commodity investments, the Fund's sub-adviser, Neuberger Berman Investment Advisers LLC (the "Sub-Adviser") seeks to identify investment opportunities using quantitative investment models and fundamental analyses with an emphasis on risk management in an attempt to take advantage of both short-term and long-term opportunities in commodity markets. By managing a broadly diversified portfolio of commodity investments with an active investment approach, the Sub-Adviser seeks to provide returns that are not highly correlated with other major asset classes. The Fund may take short positions in one or more separate commodities. The short positions used by the Fund primarily involve buying a derivative on a commodity in anticipation that the price of the commodity will decline.

The Sub-Adviser will use various quantitative models employing strategies intended to identify investment opportunities and determine portfolio weightings in different commodity sectors and markets. These strategies include: (i) a risk-balancing strategy that considers the total portfolio risk the Sub-Adviser believes to be associated with each commodity; (ii) a strategy that endeavors to assess top down macro variables among various commodity sectors (such as, energy, industrial, precious metals, agricultural, livestock and softs (e.g., sugar, cotton, cocoa and coffee)); and/or (iii) a strategy that endeavors to assess the outlook for individual commodities within each commodity sector.

From time to time, the Fund's investment program may emphasize a particular sector of the commodities markets. If the Fund emphasizes one or more sectors, the performance of investments in the Fund will likely be affected by events affecting the performance of those sectors.

The Fund's fixed income investments will be mainly in investment grade fixed income securities and are intended to provide liquidity and preserve capital and may serve as collateral for the Fund's derivative instruments. These may include fixed income securities issued by the U.S. Government and its agencies and instrumentalities, bank certificates of deposit, mortgage backed securities, asset-backed securities, and corporate securities. The Fund considers fixed income securities to be investment grade if, at the time of investment, they are rated within the four highest categories by at least one independent credit rating agency or, if unrated, are determined by the Sub-Adviser to be of comparable quality.

The Fund may invest in cash or cash equivalent instruments. Because the Fund will use derivatives to gain exposure to commodities and because derivatives may not require the Fund to deposit the full notional amount of the investment, the Fund may invest a significant amount of its assets in money market mutual funds or other fixed income instruments, as described above. The Fund's use of commodity-linked derivative instruments to obtain long and short exposure to the commodity markets may result in leverage,

which amplifies the risks that are associated with the commodities underlying the derivative instruments. The Fund's aggregate investment exposure, as measured on a notional basis, may be greater than 100% of the Fund's total assets from time to time.

Although the Fund invests primarily in domestic securities and other instruments, it may also invest in foreign securities and other instruments.

In an effort to achieve its goal, the Fund may engage in active and frequent trading.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Asset-based securities risk Asset-based securities are typically fixed-income securities whose value is related to the market price of certain commodities, interests, and other items, such as precious metals, as well as other assets, such as credit card receivables. Although the market price of these securities is expected to follow the market price of the related assets, there may not be perfect correlation. There are special risks associated with certain types of assets that will also affect the value of asset-based securities related to those assets. For an example of such special risks, please refer to "Precious metals related securities risk."
- Call risk Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates.
- Commodities regulatory risk Commodity-related operating companies typically are subject to significant foreign, federal, state and local government regulation in virtually every aspect of their operations, including how facilities are constructed, maintained and operated, environmental and safety controls, and the prices they may charge for the products and services they provide. The U.S. Commodity Futures Trading Commission ("CFTC") and the exchanges on which futures contracts are traded are authorized to take extraordinary actions in the event of a market emergency, including, for example, increasing margin requirements, establishing daily limits and suspending trading. In addition, compliance with certain CFTC requirements may increase the Fund's expenses. Future regulatory developments may impact the Fund's ability to invest in commodity-linked derivatives.
- Commodity risk Commodity prices can be extremely volatile and may be directly or indirectly affected by many factors, including changes in overall market movements, real or perceived inflationary trends, commodity index volatility, changes in interest rates or currency exchange rates, population growth and changing demographics, and factors affecting a particular industry or commodity, such as drought, floods, or other weather conditions, livestock disease, trade embargoes, competition from substitute products, transportation bottlenecks or shortages, fluctuations in supply and demand, tariffs, and international regulatory, political, and economic developments (e.g., regime changes and changes in economic activity levels).
- Commodity-linked derivatives risk The value of a commodity-linked derivative investment is typically based upon the price movements of a commodity, a commodity futures contract or commodity index, or some other readily measurable economic variable. The value of commodity-linked derivative instruments may be affected by changes in overall market movements, volatility of the underlying benchmark, changes in interest rates, or factors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs and international economic, volatility in the spot market, and political and regulatory developments. The value of commodity-linked derivatives will rise or fall in response to changes in the underlying commodity or related index. Investments in commodity-linked derivatives may be subject to greater volatility than non-derivative based investments. A liquid secondary market may not exist for certain commodity-linked derivatives, and there can be no assurance that one will develop. Commodity-linked derivatives also may be subject to credit and interest rate risks that generally affect the values of fixed-income securities. Therefore, at maturity, the Fund may receive more or less principal than it originally invested. The Fund may also receive interest payments that are more or less than the stated coupon interest payments.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- *Credit risk* The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.

- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Extension risk When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.

- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Fund's Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Portfolio turnover risk* Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Prepayment risk During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

• Volatility risk – The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.

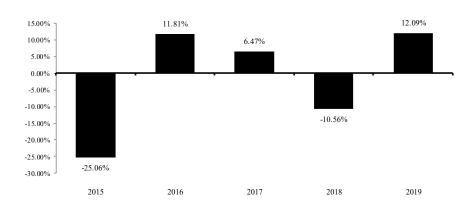

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/Neuberger Berman Commodity Strategy Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Annual Total Returns as of December 31

Class A

Best Quarter (ended 6/30/2016): 11.04%; Worst Quarter (ended 9/30/2015): -14.49%

Average Annual Total Returns as of 12/31/2019

			Life of Fund (April 28,
	1 year	5 year	2014)
JNL/Neuberger Berman Commodity Strategy Fund (Class A)	12.09%	-2.21%	-6.27%

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

Neuberger Berman Investment Advisers LLC ("NBIA")

Portfolio Managers:

	Joined Fund Management	
Name:	Team In:	Title:
Hakan Kaya	April 2014	Managing Director, NBIA
Thomas A. Sontag	April 2014	Managing Director, NBIA
David Yi Wan	April 2016	Senior Vice President, NBIA

Messrs. Wan, Kaya and Sontag are primarily responsible for the day-to-day management of the Fund's investments in commodity-linked derivative instruments. Mr. Sontag is primarily responsible for the day-to-day management of the Fund's fixed-income securities.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

Summary Prospectus – April 27, 2020

JNL/Neuberger Berman Strategic Income Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek high current income with a secondary objective of long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.48%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Total Annual Fund Operating Expenses	0.94%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	JNL/Neuberger Berman Strategic Income Fund Class A			
	1 year	3 years	5 years	10 years
ſ	\$96	\$300	\$520	\$1,155

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	95%

Principal Investment Strategies. To pursue its investment objective, the Fund invests primarily in a diversified mix of fixed rate and floating rate debt securities. The Fund's investments may include securities issued by domestic and foreign governments, corporate entities, and trust structures. The Fund may invest in a broad array of securities, including: securities issued or guaranteed as to principal or interest by the U.S. Government or any of its agencies or instrumentalities; corporate bonds; commercial paper; currencies and non-U.S. securities; mortgage-backed securities and other asset-backed securities; and loans. Securities in which the Fund may invest may be structured as fixed rate debt; floating rate debt; and debt that may not pay interest at the time of issuance.

The Fund may invest in debt securities across the credit spectrum, including investment grade securities, below investment grade securities ("high yield bonds," commonly called "junk bonds") and unrated securities. The Fund may invest without limit in below investment grade securities. The Fund considers debt securities to be below investment grade if, at the time of investment, they are rated below the four highest categories by at least one independent credit rating agency or, if unrated, are deemed by the Sub-Adviser to be of comparable quality. The Fund does not normally invest in or continue to hold securities that are in default or have defaulted with respect to the payment of interest or repayment of principal, but may do so depending on market conditions. The Fund may invest in securities whose ratings imply an imminent risk of default with respect to such payments.

The Fund may also invest without limit in derivative instruments as a means of hedging risk and/or for investment purposes, which may include altering the Fund's exposure to interest rates, sectors and individual issuers. These derivative instruments may include, but are not limited to, futures, forward foreign currency contracts, and swaps, such as total return swaps, credit default swaps and interest rate swaps.

The Fund may also invest without limit in foreign securities, but normally will not invest more than 50% of its total assets at the time of investment in obligations of issuers in emerging market countries. The Fund considers emerging market countries to be countries included in the JPMorgan Emerging Markets Bond Index - Global Diversified, the JPMorgan Corporate Emerging Markets Bond Index - Diversified, the JPMorgan Emerging Local Markets Index or the JPMorgan Government Bond Index - Emerging Markets Global Diversified, as well as those countries which are not defined as a High Income Organization for Economic Cooperation and Development (OECD) member country by the World Bank.

Additionally, the Fund may invest in convertible securities and preferred securities. The Fund may also engage in when-issued and delayed delivery transactions (such as to-be-announced mortgage-backed securities), which involve a commitment by the Fund to purchase securities that will be issued at a later date. The Fund may also hold short-term securities including cash, cash equivalents and other debt obligations.

The Fund may invest in debt securities of any maturity and does not have a target average duration.

In an effort to achieve its investment objective, the Fund may engage in active and frequent trading.

The Fund has the ability to invest in other investment companies, such as exchange-traded funds, money market funds, unit investment trusts, and open-end and closed-end funds, including affiliated investment companies.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Call risk Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates.
- Corporate loan, sovereign entity loan, and bank loan risk Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less

exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.

- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Currency transaction risk Non-U.S. currency forward contracts, options, swaps, or other derivatives contracts on non-U.S. currencies involve a risk of loss if currency exchange rates move against the Fund. Forward contracts may not be guaranteed by an exchange or clearinghouse and a default by the counterparty may result in a loss to the Fund. Governmental authorities may impose credit controls to limit the level of forward trading to the detriment of the Fund. Neither the U.S. Commodities Future Trading Commission nor the U.S. banking authorities regulate forward currency transactions through banks. In respect of such trading, the Fund is subject to the risk of bank failure or the inability of or refusal by a bank to perform with respect to such contracts.
- Debt securities ratings risk The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Distressed securities risk Distressed securities risk refers to the uncertainty of repayment of defaulted securities and obligations of distressed issuers. Because the issuer of such securities is likely to be in a distressed financial condition, repayment of distressed or defaulted securities (including insolvent issuers or issuers in payment or covenant default, in workout or restructuring or in bankruptcy or insolvency proceedings) is subject to significant uncertainties. Insolvency laws and practices in foreign jurisdictions are different than those in the U.S. and the effect of these laws and practices may be less favorable and predictable than in the U.S. Investments in defaulted securities and obligations of distressed issuers are considered highly speculative.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.

- Extension risk When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Investment in money market funds risk Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. An investment in a money market fund is not insured or guaranteed by a Federal Deposit Insurance Corporation or any other government agency. Although such funds seek to maintain a net asset value of \$1.00 per share, it is possible to lose money by investing in a money market fund.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Managed portfolio risk* As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market

- changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Portfolio turnover risk* Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Prepayment risk During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- Sovereign debt risk Investments issued by a governmental entity are subject to the risk that the governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt due to, among other things, cash flow problems, insufficient foreign currency reserves, political considerations, the relative size of the governmental entity's debt position in relation to the economy or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies. If a governmental entity defaults, it may ask for more time in which to pay its debt, request additional loans or otherwise restructure its debt. There is no legal process for collecting sovereign debt that a government does not pay nor are there bankruptcy proceedings through which all or part of the sovereign debt may be collected.
- Structured investments risk A structured investment is a derivative security designed to offer a return linked to a particular underlying security, currency, commodity or market. Structured investments may come in various forms including notes (such as exchange-traded notes), warrants and options to purchase securities. A Fund will typically use structured investments to gain exposure to a particular underlying security, currency, commodity or market when direct access to the security, currency, commodity, or market is limited or inefficient from a tax or cost standpoint. There can be no assurance that structured investments will trade at the same price or have the same value as the underlying security, currency, commodity or market. Investments in structured investments involve risks including, but not limited to, issuer risk, counterparty risk and market risk. Holders of structured investments bear risks of the underlying investment and are subject to issuer or counterparty risk because a Fund is relying on the creditworthiness of such issuer or counterparty and has no rights with respect to the underlying investment. Certain structured investments may be thinly traded or have a limited trading market and may have the effect of increasing a Fund's illiquidity to the extent that a Fund, at a particular point in time, may be unable to find qualified buyers for these securities.
- TIPS and inflation-linked bonds risk The value of inflation-protected securities generally fluctuates in response to changes in real interest rates, which are tied to the relationship between nominal interest rates and the rate of inflation. As a result, if inflation rates were to rise at a faster rate than nominal rates, real interest rates might decline, leading to an increase in the value of inflation-protected securities. In contrast, if nominal interest rates increased at a faster rate than inflation, real interest rates might rise, leading to a decrease in the value of inflation-protected securities.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- When-issued and delayed delivery securities and forward commitments risk When-issued, delayed delivery securities and forward commitments transactions arise when securities are purchased by the Fund with payment and delivery taking place in the future in order to secure what is considered to be an advantageous price or yield to the Fund at the time of entering into the transaction. When-issued and delayed delivery securities and forward commitments involve the risk that the security the Fund buys will lose value prior to its delivery. There also is the risk that the security will not be issued or that the other party to the

transaction will not meet its obligation. If this occurs, the Fund loses both the investment opportunity for the assets it set aside to pay for the security and any gain in the security's price.

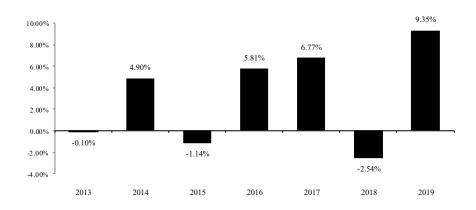

• LIBOR replacement risk – In addition to other interbank offered rates, the most common benchmark rate for floating rate securities is London Interbank Offered Rate (LIBOR), which is the rate of interest offered on short-term interbank deposits, as determined by trading between major international banks. The UK Financial Conduct Authority has announced that LIBOR rates will no longer be published after the end of 2021. The elimination of LIBOR may adversely affect the interest rates on, and value of, certain Fund investments for which the value is tied to LIBOR. Alternatives to LIBOR are established or in development in most major currencies, including the Secured Overnight Financing Rate (SOFR) that is intended to replace U.S. dollar LIBOR. Markets are slowly developing in response to these new reference rates. However, questions around the rate transition's effect on the liquidity of securities and how to appropriately adjust these rates at the time of transition remain undetermined for the Fund. The effects of discontinuation of LIBOR on the Fund will vary, and it is difficult to predict the full impact of the transition away from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new products, instruments and contracts are commercially accepted and market practices become more settled.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

Summary Prospectus – April 27, 2020

JNL/PIMCO Income Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The primary investment objective of the Fund is to maximize current income. Long-term capital appreciation is a secondary objective.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.49%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Total Annual Fund Operating Expenses	0.94%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/PIMCO Income Fund Class A			
1 year	3 years	5 years	10 years
\$96	\$300	\$520	\$1,155

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	365%

Principal Investment Strategies. The Fund seeks to achieve its investment objectives by investing, under normal circumstances, at least 65% of its total assets in a multi-sector portfolio of Fixed-Income Instruments of varying maturities, which may be represented by forwards or derivatives such as options, futures contracts or swap agreements. "Fixed-Income Instruments" include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities. The Fund will seek to maintain a high and consistent level of dividend income by investing in a broad array of fixed-income sectors and utilizing income efficient implementation strategies. The capital appreciation sought by the Fund generally arises from decreases in interest rates or improving credit fundamentals for a particular sector or security.

The Fund will generally allocate its assets among several investment sectors, without limitation, which may include: (i) high yield securities ("junk bonds") and investment grade corporate bonds of issuers located in the United States and non-U.S. countries, including emerging market countries; (ii) fixed-income securities issued by U.S. and non-U.S. governments (including emerging market governments), their agencies and instrumentalities; (iii) mortgage-related and other asset backed securities; and (iv) foreign currencies, including those of emerging market countries. However, the Fund is not required to gain exposure to any one investment sector, and the Fund's exposure to any one investment sector will vary over time. The average portfolio duration of this Fund normally varies from zero to eight years based on Pacific Investment Management Company LLC's ("PIMCO") forecast for interest rates. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates.

The Fund may invest up to 50% of its total assets in high yield securities rated below investment grade by Moody's Investors Service, Inc. ("Moody's"), or equivalently rated by S&P Global Ratings ("S&P") or Fitch, Inc. ("Fitch"), or if unrated, determined by PIMCO to be of comparable quality (except such 50% limitation shall not apply to the Fund's investments in mortgage- and asset-backed securities). In addition, the Fund may invest, without limitation, in securities denominated in foreign currencies. The Fund may invest up to 20% of its total assets in securities and instruments that are economically tied to emerging market countries (this limitation does not apply to investment grade sovereign debt denominated in the local currency with less than 1 year remaining to maturity, which means the Fund may invest in such instruments without limitation subject to any applicable legal or regulatory limitation). The Fund will normally limit its foreign currency exposure (from non-U.S. dollar denominated securities or currencies) to 10% of its total assets.

The Fund may invest, without limitation, in derivative instruments, such as options, futures contracts or swap agreements, or in mortgage- or asset backed securities, subject to applicable law and any other restrictions described in the Fund's prospectus or Statement of Additional Information.

The Fund may purchase or sell securities on a when-issued, delayed delivery or forward commitment basis and may engage in short sales. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buy backs or dollar rolls). The Fund may also invest up to 10% of its total assets in preferred securities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Call risk Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be

volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.

- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer,

such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.

- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- *Portfolio turnover risk* Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Short sales risk A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- Sovereign debt risk Investments issued by a governmental entity are subject to the risk that the governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt due to, among other things, cash flow problems, insufficient foreign currency reserves, political considerations, the relative size of the governmental entity's debt position in relation to the economy or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies. If a governmental entity defaults, it may ask for more time in which to pay its debt, request additional loans or otherwise restructure its debt. There is no legal process for collecting sovereign debt that a government does not pay nor are there bankruptcy proceedings through which all or part of the sovereign debt may be collected.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

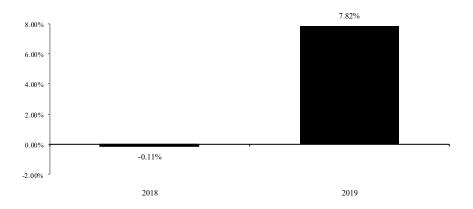

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective April 27, 2020, the Fund will be combined with JNL/Neuberger Berman Currency Fund, a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the JNL/Neuberger Berman Currency Fund.

Effective April 27, 2020, the Fund will be combined with JNL/Scout Unconstrained Bond Fund, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the JNL/Scout Unconstrained Bond Fund.

Summary Prospectus – April 27, 2020

JNL/PIMCO Investment Grade Credit Bond Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek maximum total return, consistent with preservation of capital and prudent investment management.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.35%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ^{1,2}	0.27%	
Total Annual Fund Operating Expenses	0.92%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the

^{2 &}quot;Other Expenses" are based on amounts incurred during the period ended December 31, 2019. The amount includes financing costs associated with secured borrowings. The annualized ratios of financing costs related to secured borrowings were 0.02%. The Fund's actual financing costs may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's involvement with secured borrowings and the costs associated with those transactions, each of which is expected to vary over time.

end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/PIMCO Investment Grade Credit Bond Fund Class A			
1 year	3 years	5 years	10 years
\$94	\$293	\$509	\$1,131

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	183%

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of investment grade fixed income securities of varying maturities, which may be represented by forwards, repurchase agreements, reverse repurchase agreements or loan participations and assignments or derivatives such as options, futures contracts or swap agreements. Assets not invested in investment grade corporate fixed income securities may be invested in other types of Fixed Income Instruments. "Fixed Income Instruments" include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public-or private-sector entities. The average portfolio duration of this Fund normally varies within two years (plus or minus) of the duration of the Bloomberg Barclays U.S. Credit Index, as calculated by Pacific Investment Management Company LLC, the Fund's sub-adviser (the "Sub-Adviser"). Duration is a measure of the expected life of a fixed income security that is used to determine the sensitivity of a security's price to changes in interest rates.

The Fund invests primarily in investment grade debt securities, but may invest up to 15% of its total assets in high yield securities ("junk bonds"), as rated Moody's Investors Service, Inc. ("Moody's"), Standard and Poor's Ratings Services ("S&P") or Fitch, Inc. ("Fitch"), or, if unrated, determined by the Sub-Adviser to be of comparable quality. The Fund may invest up to 30% of its total assets in securities denominated in foreign currencies, and may invest beyond this limit in U.S. dollar-denominated securities of foreign issuers. The Fund may invest up to 30% of its total assets in securities and instruments that are economically tied to emerging market countries. The Fund will normally limit its foreign currency exposure (from non-U.S. dollar-denominated securities or currencies) to 20% of its total assets.

The Fund may invest, without limitation, in derivative instruments, such as options, futures contracts or swap agreements, or in mortgage-or asset-backed securities, subject to applicable law and any other restrictions described in the Fund's Prospectus or Statement of Additional Information ("SAI"). The Fund may purchase or sell securities on a when-issued, delayed delivery or forward commitment basis and may engage in short sales. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buy backs or dollar rolls). The "total return" sought by the Fund consists of income earned on the Fund's investments, plus capital appreciation, if any, which generally arises from decreases in interest rates, foreign currency appreciation, or improving credit fundamentals for a particular sector or security. The Fund may also invest up to 10% of its total assets in preferred securities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Call risk Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates.
- Corporate loan, sovereign entity loan, and bank loan risk Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.

- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Debt securities ratings risk The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Extension risk When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Interest rate risk* When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Fund's Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- Options risk If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- *Preferred stock risk* Preferred stock represents an equity interest in a company that generally entitles the holder to receive, in preference to the holders of other stocks such as common stocks, dividends and a fixed share of the proceeds resulting from a liquidation of the company.
- Prepayment risk During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- Repurchase agreements, purchase and sale contracts risk If the other party to a repurchase agreement or purchase and sale contract defaults on its obligation under the agreement, the Fund may suffer delays and incur costs or lose money in exercising its rights under the agreement. If the seller fails to repurchase the security under a repurchase agreement or purchase and sale contract, and the market value of the security declines, the Fund may lose money.
- Reverse repurchase agreements risk Reverse repurchase agreements involve the sale of securities held by the Fund with an agreement to repurchase the securities at an agreed-upon price, date and interest payment. Reverse repurchase agreements involve the risk that the other party may fail to return the securities in a timely manner or at all. The Fund could lose money if the value of collateral held by the Fund, including the value of the investments made with the cash received from the sale of securities, is less than the value of the securities sold by the Fund. These events could also trigger adverse tax consequences to the Fund.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- Short sales risk A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- Sovereign debt risk Investments issued by a governmental entity are subject to the risk that the governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt due to, among other things, cash flow problems, insufficient foreign currency reserves, political considerations, the relative size of the governmental entity's debt position in relation to the economy or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies. If a governmental entity defaults, it may ask for more time in which to pay its debt, request additional loans or otherwise restructure its debt. There is no legal process for collecting sovereign debt that a government does not pay nor are there bankruptcy proceedings through which all or part of the sovereign debt may be collected.

- Structured investments risk A structured investment is a derivative security designed to offer a return linked to a particular underlying security, currency, commodity or market. Structured investments may come in various forms including notes (such as exchange-traded notes), warrants and options to purchase securities. A Fund will typically use structured investments to gain exposure to a particular underlying security, currency, commodity or market when direct access to the security, currency, commodity, or market is limited or inefficient from a tax or cost standpoint. There can be no assurance that structured investments will trade at the same price or have the same value as the underlying security, currency, commodity or market. Investments in structured investments involve risks including, but not limited to, issuer risk, counterparty risk and market risk. Holders of structured investments bear risks of the underlying investment and are subject to issuer or counterparty risk because a Fund is relying on the creditworthiness of such issuer or counterparty and has no rights with respect to the underlying investment. Certain structured investments may be thinly traded or have a limited trading market and may have the effect of increasing a Fund's illiquidity to the extent that a Fund, at a particular point in time, may be unable to find qualified buyers for these securities.
- Swaps risk Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject to the general risks relating to derivatives described herein. The Dodd–Frank Act mandates a new regulatory framework for trading swaps in the United States. Standardized swaps will be required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The regulations to implement the Dodd-Frank Act are still being developed so there may be further changes to the system intended to safeguard the collateral of parties to swaps.
- When-issued and delayed delivery securities and forward commitments risk When-issued, delayed delivery securities and forward commitments transactions arise when securities are purchased by the Fund with payment and delivery taking place in the future in order to secure what is considered to be an advantageous price or yield to the Fund at the time of entering into the transaction. When-issued and delayed delivery securities and forward commitments involve the risk that the security the Fund buys will lose value prior to its delivery. There also is the risk that the security will not be issued or that the other party to the transaction will not meet its obligation. If this occurs, the Fund loses both the investment opportunity for the assets it set aside to pay for the security and any gain in the security's price.
- LIBOR replacement risk In addition to other interbank offered rates, the most common benchmark rate for floating rate securities is London Interbank Offered Rate (LIBOR), which is the rate of interest offered on short-term interbank deposits, as determined by trading between major international banks. The UK Financial Conduct Authority has announced that LIBOR rates will no longer be published after the end of 2021. The elimination of LIBOR may adversely affect the interest rates on, and value of, certain Fund investments for which the value is tied to LIBOR. Alternatives to LIBOR are established or in development in most major currencies, including the Secured Overnight Financing Rate (SOFR) that is intended to replace U.S. dollar LIBOR. Markets are slowly developing in response to these new reference rates. However, questions around the rate transition's effect on the liquidity of securities and how to appropriately adjust these rates at the time of transition remain undetermined for the Fund. The effects of discontinuation of LIBOR on the Fund will vary, and it is difficult to predict the full impact of the transition away from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new products, instruments and contracts are commercially accepted and market practices become more settled.

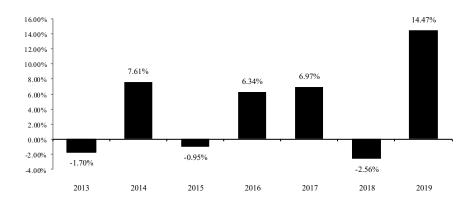

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/PIMCO Investment Grade Credit Bond Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the

Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

JNL/PIMCO Real Return Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek maximum real return, consistent with preservation of real capital and prudent investment management.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.38%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ^{1,2}	0.99%	
Total Annual Fund Operating Expenses	1.67%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

² "Other Expenses" are based on amounts incurred during the period ended December 31, 2019. The amount includes the costs associated with the Fund's short sales on equity securities. When a cash dividend is declared on a security for which the Fund holds a short position, the Fund incurs the obligation to pay an amount equal to that dividend to the lender of the shorted security. In addition, the Fund incurs borrowing fees related to short sale transactions. The annualized ratios of dividend expense on short sales and borrowing fees related to short sales to assets for the period were 0.86%. The Fund's actual dividend expense and borrowing fees on securities sold short in future periods may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's short positions, the actual dividends paid with respect to the securities the Fund sells short, and the actual timing of the Fund's short sale transactions, each of which is expected to vary over time. The annualized ratios of dividend expense on short sales and borrowing fees related to short sales have been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/PIMCO Real Return Fund Class A				
1 year 3 years 5 years 10 years				
\$170	\$526	\$907	\$1,976	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	225%

Principal Investment Strategies. The Fund seeks its investment objective by investing under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in inflation-indexed bonds of varying maturities issued by the U.S. and non-U.S. governments, their agencies or instrumentalities, and corporations, which may be represented by forwards or derivatives such as options, futures contracts, or swap agreements. Assets not invested in inflation-indexed bonds may be invested in other types of fixed-income instruments. "Fixed-income instruments" include bonds, debt securities and other similar instruments issued by various U.S. and non-U.S. public- or private-sector entities. Inflation-indexed bonds are fixed-income securities that are structured to provide protection against inflation. The value of the bond's principal or the interest income paid on the bond is adjusted to track changes in an official inflation measure. The U.S. Treasury uses the Consumer Price Index for All Urban Consumers ("CPI-U") as the inflation measure. Inflation-indexed bonds issued by a foreign government are generally adjusted to reflect a comparable inflation index, calculated by that government. "Real return" equals total return less the estimated rate of inflation, which is typically measured by the change in an official inflation measure, such as CPI-U. The average portfolio duration of this Fund normally varies within three years (plus or minus) of the duration of the Bloomberg Barclays U.S. TIPS Index, as calculated by Pacific Investment Management Company LLC ("PIMCO"). For these purposes, in calculating the Fund's average portfolio duration, PIMCO includes the real duration of the inflation-indexed portfolio.

The Fund invests primarily in investment grade securities, but may invest up to 10% of its total assets in high yield securities ("junk bonds") rated B or higher by Moody's or equivalently rated by S&P Global Ratings or Fitch Inc., or, if unrated, determined by PIMCO to be of comparable quality (except that within such 10% limitation, the Fund may invest in mortgage-related securities rated below B). The Fund also may invest up to 30% of its total assets in securities denominated in foreign currencies, and may invest beyond this limit in U.S. dollar denominated securities of foreign issuers. The Fund may invest up to 15% of its total assets in securities and instruments that are economically tied to emerging market countries. Foreign currency exposure (from non-U.S. dollar-denominated securities or currencies) normally will be limited to 20% of the Fund's total assets.

The Fund may invest all of its assets in derivative instruments, such as futures, options, or swap agreements, or in mortgage or asset-backed securities. The Fund may purchase or sell securities on a when-issued basis, delayed delivery or forward commitment basis and may engage in short sales. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts or by using other investment techniques (such as buybacks or dollar rolls). The Fund may also invest up to 10% of its total assets in preferred securities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Call risk Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be

volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.

- Debt securities ratings risk The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Extension risk When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the

costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Inflation-indexed securities risk Inflation-indexed securities have a tendency to react to changes in real interest rates. Real interest rates represent nominal (stated) interest rates lowered by the anticipated effect of inflation. In general, the price of an inflation-indexed security can decrease when real interest rates increase, and can increase when real interest rates decrease. Interest payments on inflation-indexed securities will fluctuate as the principal and/or interest is adjusted for inflation and can be unpredictable. In periods of deflation, the Fund may not receive any income from such investments. In certain interest rate environments, such as when real interest rates are rising faster than normal interest rates, inflation-indexed securities may experience greater losses than other fixed-income securities with similar durations.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- Options risk If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in

- exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or
 in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction
 costs, which may reduce performance.
- Prepayment risk During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- Short sales risk A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- Swaps risk Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject to the general risks relating to derivatives described herein. The Dodd–Frank Act mandates a new regulatory framework for trading swaps in the United States. Standardized swaps will be required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The regulations to implement the Dodd–Frank Act are still being developed so there may be further changes to the system intended to safeguard the collateral of parties to swaps.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

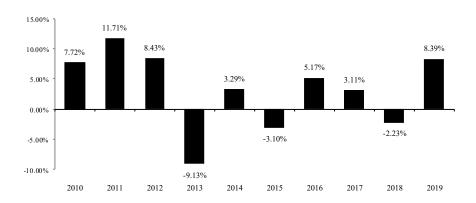

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective August 13, 2018, the Fund was combined with JNL Real Assets Fund ("Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

JNL/PPM America Floating Rate Income Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek to provide a high level of current income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.46%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.16%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	0.93%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/PPM America Floating Rate Income Fund Class A				
	1 year	3 years	5 years	10 years
	\$95	\$296	\$515	\$1,143

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	36%

Principal Investment Strategies. Under normal circumstances, the Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in income-producing floating rate instruments, including floating rate loans, floating rate notes, other floating rate debt securities, structured products (including, commercial mortgage-backed securities, asset-backed securities, and collateralized loan obligations which are debt securities typically issued by special purpose vehicles and secured by loans), and repurchase agreements.

Additionally, for purposes of satisfying the 80% requirement, the Fund has the ability to invest in other investment companies, such as exchange-traded funds ("ETFs") comprised of the securities described above, short term bond funds and floating rate funds. The Fund generally uses ETFs as a tool to obtain exposure to the securities in which it primarily invests. Money market holdings with a remaining maturity of less than 60 days will be deemed floating rate assets for purposes of the 80% requirement.

The Fund invests primarily in U.S. dollar denominated senior floating rate loans of domestic and foreign borrowers ("Senior Loans"). Senior Loans typically are of below investment grade quality and have below investment grade credit ratings, which ratings are associated with securities having high risk and speculative characteristics, and are commonly known as "junk bonds."

The Fund may also invest in secured and unsecured subordinated loans, second lien loans and subordinated bridge loans ("Junior Loans"), debtor-in-possession loans, mezzanine loans, fixed-income debt obligations, corporate bonds and money market instruments. Junior Loans typically are of below investment grade quality and have below investment grade credit ratings, which rating are associated with securities having high risk and speculative characteristics. While the Fund may invest in loans with no credit rating or without any credit rating restrictions, under normal circumstances PPM America, Inc. ("Sub-Adviser") currently expects that the average credit ratings of the Fund's loan facilities will primarily be between BB-/Ba3 and B/B2 as determined by Moody's Investors Service, Inc. ("Moody's"), S&P Global Ratings ("S&P") or Fitch, Inc. ("Fitch"), or if unrated, determined by the Sub-Adviser to be of comparable quality, though the average credit rating of the Fund's loan portfolio may be outside of this range from time to time.

The Fund may invest up to 20% of its net assets in cash and non-floating rate debt securities, including lower-rated debt securities ("high yield"), commonly known as "junk bonds," and equity securities. Below investment grade securities typically offer a higher yield, but generally carry more risks than higher rated securities with similar maturities. As a result, an investment in below investment grade securities is considered speculative.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Corporate loan, sovereign entity loan, and bank loan risk Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.

- Senior loans risk The senior loans in which the Fund invests are usually rated below investment grade. The amount of public information with respect to loans may be less extensive than that available for registered or exchange listed securities. An economic downturn generally leads to a higher non-payment rate, and a senior loan may lose significant value before a default occurs. A secured senior loan may not be adequately collateralized. Moreover, any specific collateral used to secure a senior loan may decline in value or become illiquid, which would adversely affect the senior loan's value.
- Second lien loans risk Second lien loans generally are subject to similar risks as those associated with investments in senior loans. Because second lien loans are subordinated and thus lower in priority of payment to senior loans, they are subject to the additional risk that the cash flow of the borrower and property securing the loan or debt, if any, may be insufficient to meet scheduled payments after giving effect to the senior secured obligations of the borrower.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- Consumer discretionary risk If a Fund invests a significant portion of its assets in issuers in the consumer discretionary sector of the market, the Fund may be more affected by events influencing the consumer discretionary sector than a fund that is more diversified across numerous sectors. An investment in issuers in the consumer discretionary sector can be significantly affected by the performance of the overall economy, interest rates, competition and consumer confidence. Success of these companies can depend heavily on disposable household income and consumer spending. Changes in demographics and consumer tastes can also affect the demand for, and success of, products of consumer discretionary companies.
- High-yield bonds, lower-rated bonds, and unrated securities risk High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Prepayment risk During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Debt securities ratings risk The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- LIBOR replacement risk In addition to other interbank offered rates, the most common benchmark rate for floating rate securities is London Interbank Offered Rate (LIBOR), which is the rate of interest offered on short-term interbank deposits, as determined by trading between major international banks. The UK Financial Conduct Authority has announced that LIBOR rates will no longer be published after the end of 2021. The elimination of LIBOR may adversely affect the interest rates on, and value of, certain Fund investments for which the value is tied to LIBOR. Alternatives to LIBOR are established or in development in most major currencies, including the Secured Overnight Financing Rate (SOFR) that is intended to replace U.S. dollar LIBOR. Markets are slowly developing in response to these new reference rates. However, questions around the rate transition's effect on the liquidity of securities and how to appropriately adjust these rates at the time of transition remain undetermined for the Fund. The effects of discontinuation of LIBOR on the Fund will vary, and it is difficult to predict the full impact of the transition away from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new products, instruments and contracts are commercially accepted and market practices become more settled.

- *Income risk* The Fund is subject to the risk that the income generated from the Fund's investments may decline in the event of falling interest rates. Income risk may be high if the Fund's income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund's distributions to shareholders may decline when interest rates fall.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Managed portfolio risk* As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Temporary defensive positions and large cash positions risk In anticipation of, or in response to, adverse market or other conditions, or atypical circumstances such as unusually large cash inflows or redemptions, and/or Fund mergers or rebalances, the Fund may temporarily hold all or a significant portion of its assets in cash, cash equivalents, affiliated and unaffiliated money market funds, or high quality debt instruments. Taking a defensive or large cash position may reduce the potential for appreciation of the portfolio and may affect performance.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated

with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.

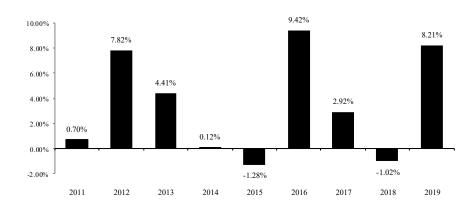

• Investment in money market funds risk – Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. An investment in a money market fund is not insured or guaranteed by a Federal Deposit Insurance Corporation or any other government agency. Although such funds seek to maintain a net asset value of \$1.00 per share, it is possible to lose money by investing in a money market fund.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

JNL/PPM America High Yield Bond Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to maximize current income. As a secondary objective, the Fund seeks capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.33%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.11%	
Acquired Fund Fees and Expenses ²	0.02%	
Total Annual Fund Operating Expenses	0.76%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/PPM America High Yield Bond Fund Class A			
1 year	3 years	5 years	10 years
\$78	\$243	\$422	\$942

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	75%

Principal Investment Strategies. The Fund invests under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in high-yield, high-risk debt securities ("junk bonds") and related investments that are rated below investment grade (i.e., rated below BBB- or Baa3) by at least one major credit rating agency, or, if not rated by any credit rating agency, determined to be below investment-grade quality by PPM America, Inc. ("Sub-Adviser"). Below investment grade securities could include split-rated securities, which are securities that are rated as investment grade by at least one credit rating agency but rated below investment grade by another agency. Below investment grade securities offer a higher yield, but generally carry more risks than higher rated securities with similar maturities. As a result, an investment in below investment grade securities is considered speculative.

The Fund may also invest up to 20% of its total assets in equity securities (other than preferred stock, in which the Fund may invest without limit). The Fund may invest in securities sold pursuant to Rule 144A of the Securities Act of 1933, as amended. Rule 144A securities are restricted securities that can be resold to qualified institutional buyers but not to the general public. The Fund may also invest in bank loans.

The Fund may also invest up to 35% of its total assets in securities of foreign issuers. To the extent that the Fund invests in emerging market debt rated below BBB- or Baa3 by at least one major credit rating agency, or, if not rated by any credit rating agency, determined by Sub-Adviser to be below investment-grade quality, this will be considered as an investment in a high-yield security for purposes of the 80% investment minimum requirement.

Additionally, the Fund has the ability to invest in other investment companies, such as exchange-traded funds ("ETFs"), money market funds, unit investment trusts and open-end and closed-end funds, including affiliated investment companies. For purposes of satisfying the 80% requirement, the Fund may invest in high yield ETFs comprised of the securities described above. The Fund generally uses high yield ETFs as a tool to obtain exposure to the securities in which it primarily invests.

In seeking to maximize income, the Sub-Adviser seeks to identify the best relative value investment opportunities across various debt sectors by analyzing overall economic conditions within and among these sectors. In pursuing capital appreciation, the Sub-Adviser looks for those companies that it believes have the highest potential for improving credit fundamentals. In light of the risks associated with high yield securities, the Sub-Adviser takes various factors into consideration in evaluating the creditworthiness of an issuer.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged

and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.

- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Distressed debt risk The Fund may invest in securities of issuers that are, or are about to be, involved in reorganizations, financial restructurings, or bankruptcy (also known as "distressed debt"). Such distressed debt securities involve substantial risk in addition to the risks of investing in lower-grade debt securities. To the extent that the Fund invests in distressed debt, the Fund is subject to the risk that it may lose a portion or all or its investment in the distressed debt and may incur higher expenses trying to protect its interests in distressed debt.
- *Income risk* The Fund is subject to the risk that the income generated from the Fund's investments may decline in the event of falling interest rates. Income risk may be high if the Fund's income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund's distributions to shareholders may decline when interest rates fall.
- Corporate loan, sovereign entity loan, and bank loan risk Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- Senior loans risk The senior loans in which the Fund invests are usually rated below investment grade. The amount of public information with respect to loans may be less extensive than that available for registered or exchange listed securities. An economic downturn generally leads to a higher non-payment rate, and a senior loan may lose significant value before a default occurs. A secured senior loan may not be adequately collateralized. Moreover, any specific collateral used to secure a senior loan may decline in value or become illiquid, which would adversely affect the senior loan's value.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Debt securities ratings risk The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund,

and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Call risk Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates.
- Rule 144A securities risk Rule 144A securities are securities offered as exempt from registration with the SEC, but may be treated as liquid securities because there is a market for such securities. Rule 144A securities may have an active trading market, but carry the risk that the active trading market may not continue. To the extent that institutional buyers become, for a time, uninterested in purchasing Rule 144A securities, investing in such securities could increase the Fund's level of illiquidity.
- Second lien loans risk Second lien loans generally are subject to similar risks as those associated with investments in senior loans. Because second lien loans are subordinated and thus lower in priority of payment to senior loans, they are subject to the additional risk that the cash flow of the borrower and property securing the loan or debt, if any, may be insufficient to meet scheduled payments after giving effect to the senior secured obligations of the borrower.
- Prepayment risk During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Investment in money market funds risk Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. An investment in a money market fund is not insured or guaranteed by a Federal Deposit Insurance Corporation or any other government agency. Although such funds seek to maintain a net asset value of \$1.00 per share, it is possible to lose money by investing in a money market fund.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- *Mezzanine securities risk* Mezzanine securities carry the risk that the issuer will not be able to meet its obligations and that the equity securities purchased with the mezzanine investments may lose value.
- LIBOR replacement risk In addition to other interbank offered rates, the most common benchmark rate for floating rate securities is London Interbank Offered Rate (LIBOR), which is the rate of interest offered on short-term interbank deposits, as determined by trading between major international banks. The UK Financial Conduct Authority has announced that LIBOR rates will no longer be published after the end of 2021. The elimination of LIBOR may adversely affect the interest rates on, and value of, certain Fund investments for which the value is tied to LIBOR. Alternatives to LIBOR are established or in development in most major currencies, including the Secured Overnight Financing Rate (SOFR) that is intended to replace U.S. dollar LIBOR. Markets are slowly developing in response to these new reference rates. However, questions around the rate transition's effect on the liquidity of securities and how to appropriately adjust these rates at the time of transition remain undetermined for the Fund. The effects of discontinuation of LIBOR on the Fund will vary, and it is difficult to predict the full impact of the transition away

from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new products, instruments and contracts are commercially accepted and market practices become more settled.

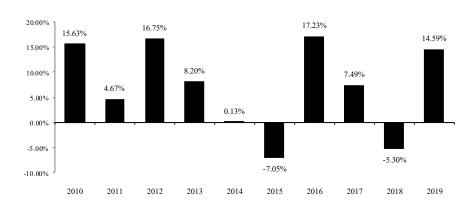

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, the Fund was combined with JNL/PPM America Long Short Credit Fund ("Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

JNL/PPM America Small Cap Value Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term growth of capital.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.57%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.11%	
Total Annual Fund Operating Expenses	0.98%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/PPM America Small Cap Value Fund Class A			
1 year	3 years	5 years	10 years
\$100	\$312	\$542	\$1,201

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	31%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing, primarily, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) under normal market conditions in a diversified portfolio of equity securities of U.S. companies within the range of securities of the S&P SmallCap 600 Index ("Index") at the time of initial purchase. The market capitalization range of the Index will vary with market conditions over time, and was \$97 million to \$6.76 billion as of December 31, 2019.

If the market capitalization of a company held by the Fund moves outside the then-current Index range, the Fund may, but is not required to, sell such company's securities. Equity securities include common and preferred stocks and securities with economic characteristics similar to those of common stock, such as rights and warrants.

PPM America, Inc. ("Sub-Adviser") employs a value investing style that can be purchased at a significant discount relative to the market. The Sub-Adviser utilizes fundamental research with a focus on bottom up security selection using a range of quantitative and qualitative factors. These factors include a company's financial condition, competitive position and management team strength. The investment process is focused on appraising companies rather than forecasting earnings. This process involves understanding the reasons why securities are undervalued and identifying potential for positive change. With a focus on security selection, sector and industry weightings are primarily the residual of bottom-up stock selection.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.

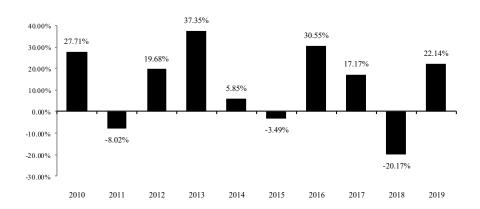

- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to realize maximum total return, consistent with the preservation of capital and prudent investment management.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.39%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.11%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	0.81%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/PPM America Total Return Fund Class A				
	1 year	3 years	5 years	10 years
	\$83	\$259	\$450	\$1,002

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	95%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified portfolio of fixed-income investments of U.S. and foreign issuers such as government, corporate, mortgage-backed securities and other asset-backed securities and cash equivalents. The Fund's average portfolio duration normally varies within two years (plus or minus) of the duration of the Bloomberg Barclays U.S. Aggregate Bond Index. Duration is a measure of a bond price's sensitivity to a change in interest rates. Generally, the longer a bond's duration, the greater its price sensitivity to a change in interest rates. For example, portfolio duration of two years means that if interest rates increased by one percent, the value of the portfolio would decrease by approximately two percent. The Fund seeks to manage duration versus the duration of the benchmark as a reflection of its expectation for future changes in interest rates.

The Fund may invest up to 20% of its total assets in securities rated below investment grade (sometimes referred to as "high yield" securities or "junk bonds"), including floating rate loans and securities of distressed companies. High yield or junk bonds are bonds that are rated below investment grade (i.e., rated below BBB- or Baa3) by at least one major credit rating agency or, if not rated by any credit rating agency, deemed to be below investment-grade quality by PPM America, Inc. ("Sub-Adviser"). Investment grade securities could include split-rated securities, which are securities that are rated as investment grade by at least one credit rating agency but rated below investment grade by another agency. Below investment grade securities offer a higher yield, but generally carry more risks than higher rated securities with similar maturities. As a result, an investment in below investment grade securities is considered speculative. The Fund may invest up to 30% of its total assets in securities denominated in foreign currencies of which up to 15% may include securities of issuers based in emerging markets. Emerging market countries are generally considered to be countries with developing economies or markets and may include any country recognized to be an emerging market country by the International Monetary Fund, MSCI, Inc. or Standard & Poor's Corporation or recognized to be a developing country by the United Nations. The Fund may invest without limit in U.S. dollar-denominated securities or currencies) such that foreign currency exposure will normally be limited to 10% of the Fund's total assets.

For purposes of satisfying the 80% requirement, the Fund may also invest in derivative instruments that have economic characteristics similar to the fixed income instruments mentioned above such as options, futures contracts or swap agreements. Specifically, the Fund may use futures to hedge duration or to increase the Fund's exposure to interest rate or yield curve risk. The Fund may also use credit default swaps or credit default swap indices (CDX) to increase or decrease the Fund's exposure to credit risk or to hedge credit risk in a particular name, industry or sector. The Fund may invest without limitation in derivative instruments. The Fund may, without limitation, seek to obtain market exposure to the securities in which it primarily invests by entering into purchase and sale contracts of mortgage pools or by using other investment techniques (such as dollar rolls).

Additionally, the Fund has the ability to invest in money market funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-

- income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- *Income risk* The Fund is subject to the risk that the income generated from the Fund's investments may decline in the event of falling interest rates. Income risk may be high if the Fund's income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund's distributions to shareholders may decline when interest rates fall.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services
- Prepayment risk During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- Call risk Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates.
- Asset-based securities risk Asset-based securities are typically fixed-income securities whose value is related to the market price of certain commodities, interests, and other items, such as precious metals, as well as other assets, such as credit card receivables. Although the market price of these securities is expected to follow the market price of the related assets, there may not be perfect correlation. There are special risks associated with certain types of assets that will also affect the value of asset-based securities related to those assets. For an example of such special risks, please refer to "Precious metals related securities risk."
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Debt securities ratings risk The use of credit ratings in evaluating debt securities can involve certain risks, including the risk that the credit rating may not reflect the issuer's current financial condition or events since the security was last rated by a rating agency. Credit ratings may be influenced by conflicts of interest or based on historical data that no longer apply or are accurate.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Extension risk When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.

- When-issued and delayed delivery securities and forward commitments risk When-issued, delayed delivery securities and forward commitments transactions arise when securities are purchased by the Fund with payment and delivery taking place in the future in order to secure what is considered to be an advantageous price or yield to the Fund at the time of entering into the transaction. When-issued and delayed delivery securities and forward commitments involve the risk that the security the Fund buys will lose value prior to its delivery. There also is the risk that the security will not be issued or that the other party to the transaction will not meet its obligation. If this occurs, the Fund loses both the investment opportunity for the assets it set aside to pay for the security and any gain in the security's price.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Rule 144A securities risk Rule 144A securities are securities offered as exempt from registration with the SEC, but may be treated as liquid securities because there is a market for such securities. Rule 144A securities may have an active trading market, but carry the risk that the active trading market may not continue. To the extent that institutional buyers become, for a time, uninterested in purchasing Rule 144A securities, investing in such securities could increase the Fund's level of illiquidity.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

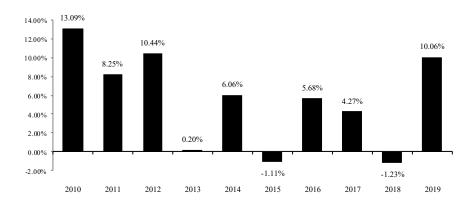

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data below includes the performance of the JNL/PPM America Total Return Fund, then a series of JNL Investors Series Trust, for periods before the Fund's registration statement became effective.

Annual Total Returns as of December 31

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts.

You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

JNL/RAFI® Fundamental Asia Developed Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to track the performance of the RAFI® Fundamental Asia Developed Index.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.19%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.19%	
Total Annual Fund Operating Expenses ²	0.68%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Expense information has been restated to reflect current fees.

JNL/RAFI® Fundamental Asia Developed Fund Class A			
1 year	3 years	5 years	10 years
\$69	\$218	\$379	\$847

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	168%

Portfolio turnover for the period of January 1, 2019, to June 23, 2019 is for the Fund when operating under its former investment strategy and name, JNL/Mellon Capital Pacific Rim 30 Fund.

Principal Investment Strategies. The Fund invests, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the component securities ("Component Securities") of the RAFI Fundamental Asia Developed Index (the "Index"). The Fund may invest the remainder of its assets in cash, securities, and instruments that are not Component Securities but which Mellon Investments Corporation, the Fund's sub-adviser ("Sub-Adviser"), believes will help the Fund track its Index. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term.

The Index is constructed by RAFI Indices, LLC (the "Index Provider"). The Index Provider uses a fundamental weighting approach to construct the Index, which includes a diversified universe of securities from developed Asian countries. A company's eligibility for the universe is determined by the company's relative size based on its fundamental weight, calculated using adjusted sales, cash flow, dividends and buybacks, and book value.

As of December 31, 2019, the Index consisted of 600 Component Securities. The Index is reconstituted annually and rebalanced on a quarterly staggered basis on the last business day of March, June, and September and the third Friday of December. The Index is split into four equal parts (tranches), and each tranche has equal weight at the March rebalance. Each tranche is rebalanced once a year to target weights determined for that quarter.

The Sub-Adviser uses a "passive" or "indexing" approach to try to achieve the Fund's investment objective. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may also invest in exchange-traded funds ("ETFs") to assist with index rebalances and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest, without limitation, in equity and equity-related securities, including common and preferred securities, from developed Asian countries. In addition to futures, as described above, the Fund may also invest in other derivative instruments, such as options or swap agreements.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

• Equity securities risk – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- Asian investment risk Investing in Asia involves many of the same risks as investing in foreign securities. In addition, since Asia includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Asia and to be more volatile than the performance of more geographically diversified funds.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- License termination risk The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.
- Limited management, trading cost and rebalance risk Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain

risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.

• Exchange-traded funds investing risk — An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.

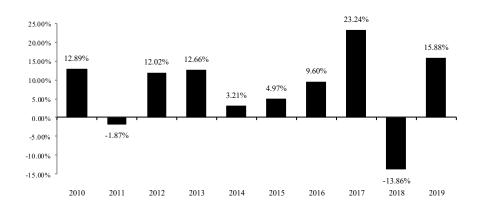

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to June 24, 2019 reflects the results when the Fund's principal investment strategies were different, and the Fund's benchmark was the MSCI Pacific Index (Net). The RAFI Fundamental Asia Developed Index (Gross) represents the total return of the index over the applicable periods (total return assumes no taxation of foreign dividends whereas Fund shareholders would experience taxation of foreign dividends). The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund's primary benchmark, the MSCI Pacific Index (Net), was replaced with the RAFI Fundamental Asia Developed Index (Net). Consistent with the Fund's principal investment strategies, the Fund uses the MSCI Pacific Index (Net) as its secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

JNL/RAFI® Fundamental Europe Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to track the performance of the RAFI® Fundamental Europe Index.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.19%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.20%	
Total Annual Fund Operating Expenses ²	0.69%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Expense information has been restated to reflect current fees.

JNL/RAFI® Fundamental Europe Fund Class A			
1 year	3 years	5 years	10 years
\$70	\$221	\$384	\$859

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	137%

Portfolio turnover for the period of January 1, 2019, to June 23, 2019 is for the Fund when operating under its former investment strategy and name, JNL/Mellon Capital European 30 Fund.

Principal Investment Strategies. The Fund invests, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the component securities ("Component Securities") of the RAFI Fundamental Europe Index (the "Index"). The Fund may invest the remainder of its assets in cash, securities, and instruments that are not Component Securities but which Mellon Investments Corporation, the Fund's sub-adviser ("Sub-Adviser"), believes will help the Fund track its Index. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term.

The Index is constructed by RAFI Indices, LLC (the "Index Provider"). The Index Provider uses a fundamental weighting approach to construct the Index, which includes a diversified universe of securities from developed European countries. A company's eligibility for the universe is determined by the company's relative size based on its fundamental weight, calculated using adjusted sales, cash flow, dividends and buybacks, and book value.

As of December 31, 2019, the Index consisted of 354 Component Securities. The Index is reconstituted annually and rebalanced on a quarterly staggered basis on the last business day of March, June, and September and the third Friday of December. The Index is split into four equal parts (tranches), and each tranche has equal weight at the March rebalance. Each tranche is rebalanced once a year to target weights determined for that quarter.

The Sub-Adviser uses a "passive" or "indexing" approach to try to achieve the Fund's investment objective. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may also invest in exchange-traded funds ("ETFs") to assist with index rebalances and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest, without limitation, in equity and equity-related securities, including common and preferred securities, from developed European countries. In addition to futures, as described above, the Fund may also invest in other derivative instruments, such as options or swap agreements.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with

investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- License termination risk The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.
- Limited management, trading cost and rebalance risk Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor

sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.

- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.

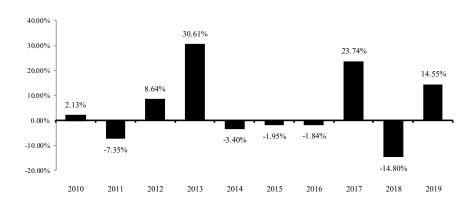

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to June 24, 2019 reflects the Fund's results when the Fund's principal investment strategies were different, and the Fund's benchmark was the MSCI Europe Index (Net). The RAFI Fundamental Europe Index (Gross) represents the total return of the index over the applicable periods (total return assumes no taxation of foreign dividends where as Fund shareholders would experience taxation of foreign dividends). The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund's primary benchmark, the MSCI Europe Index (Net), was replaced with the RAFI Fundamental Europe Index (Gross). Consistent with the Fund's principal investment strategies, the Fund uses the MSCI Europe Index (Net) as its secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/RAFI® Fundamental U.S. Small Cap Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to track the performance of the RAFI[®] Fundamental U.S. Small Company Index.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses	
(Expenses that you pay each year as a percentage of the value of your in	vestment)
	Class A
Management Fee	0.18%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.20%
Total Annual Fund Operating Expenses ²	0.68%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Expense information has been restated to reflect current fees.

Ī	JNL/RAFI® Fundamental U.S. Small Cap Fund Class A			
Ī	1 year	3 years	5 years	10 years
ſ	\$69	\$218	\$379	\$847

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	182%

Portfolio turnover for the period of January 1, 2019, to June 23, 2019 is that of the JNL/Mellon Capital S&P® SMid 60 Fund, the Fund's predecessor and a series of JNL Variable Fund LLC.

Principal Investment Strategies. The Fund invests, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the component securities ("Component Securities") of the RAFI Fundamental U.S. Small Company Index (the "Index"). The Fund may invest the remainder of its assets in cash, securities, and instruments that are not Component Securities but which Mellon Investments Corporation, the Fund's sub-adviser ("Sub-Adviser"), believes will help the Fund track its Index. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term.

The Index is constructed by RAFI Indices, LLC (the "Index Provider"). The Index Provider uses a fundamental weighting approach to construct the Index, which includes a diversified universe of U.S. small companies determined by the relative size of each company based on a company's fundamental footprint, including adjusted sales, cash flow, dividends and buybacks, and book value.

As of December 31, 2019, the Index consisted of 805 Component Securities. The Index is reconstituted annually and rebalanced on a quarterly staggered basis on the last business day of March, June, and September and the third Friday of December. The Index is split into four equal parts (tranches), and each tranche has equal weight at the March rebalance. Each tranche is rebalanced once a year to target weights determined for that quarter.

The Sub-Adviser uses a "passive" or "indexing" approach to try to achieve the Fund's investment objective. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may also invest in exchange-traded funds ("ETFs") to assist with index rebalances and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest, without limitation, in U.S. equity and equity-related securities, including common and preferred securities. In addition to futures, as described above, the Fund may also invest in other derivative instruments, such as options or swap agreements.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.

- License termination risk The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.
- Limited management, trading cost and rebalance risk Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

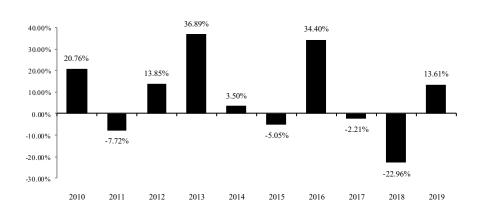

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's predecessor fund's (JNL/Mellon Capital S&P® SMid 60 Fund) performance from year to year and by showing how the Fund's predecessor fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the predecessor fund. Performance prior to June 24, 2019 reflects the predecessor fund's results when the predecessor fund's primary benchmark was the S&P MidCap 400 Index and its secondary benchmark was the S&P SmallCap 600 Index. Effective June 24, 2019, for consistency with the Fund's principal investment strategy, the Fund's primary benchmark became the RAFI® Fundamental U.S. Small Company Index (Gross) and its secondary benchmark became the MSCI USA Small Cap Index (Gross). The predecessor fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The Fund commenced operations on June 24, 2019. Performance shown below is from the JNL/Mellon Capital S&P® SMid 60 Fund, a series of JNL Variable Fund LLC, for below periods before the Fund's registration statement became effective.

^{*} Prior to April 29, 2019, the Fund Management team information shown is for the JNL/Mellon Capital S&P® SMid 60 Fund, the Fund's predecessor fund.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/RAFI® Multi-Factor U.S. Equity Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to track the performance of the RAFI® Multi-Factor U.S. Index.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
	Class A
Management Fee	0.17%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.19%
Total Annual Fund Operating Expenses ²	0.66%

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Expense information has been restated to reflect current fees.

	JNL/RAFI® Multi-Factor U.S. Equity Fund Class A				
	1 year	3 years	5 years	10 years	
ſ	\$67	\$211	\$368	\$822	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	153%

Portfolio turnover for the period of January 1, 2019, to June 23, 2019 is that of the JNL/Mellon Capital JNL 5 Fund, the Fund's predecessor and a series of JNL Variable Fund LLC.

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing under normal circumstances at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in the component securities ("Component Securities") of the RAFI Multi-Factor U.S. Index (the "Index"). The Fund may invest the remainder of its assets in cash, securities, and instruments that are not Component Securities but which Mellon Investments Corporation, the Fund's sub-adviser ("Sub-Adviser"), believes will help the Fund track its Index. The Index is designed to provide long-only exposure to multiple equity factors that seek to produce attractive long-term returns, and which may lower risk compared to less diversified strategies. The Fund attempts to replicate the Index by investing all or substantially all of its assets in the stocks that make up the Index. Indexing may offer a cost-effective investment approach to gaining diversified market exposure over the long-term.

The Index is constructed by RAFI Indices, LLC (the "Index Provider"). The Index Provider uses a rules-based approach to construct five factor portfolios within the Index. The Index equally weights each of the factor portfolios into a combined portfolio of stocks that are weighted by their fundamental size (e.g., earnings, revenues, book value).

The Index consists of five "factor portfolios," each of which emphasizes one of the following factors: value, low volatility, quality, momentum, and size.

The value factor emphasizes companies with high ratio of company fundamental weight to its market capitalization weight.

The low volatility factor emphasizes companies with low risk measure calculated as the variance of a company's daily excess return over five years explained by global, local country groups, and global industry excess returns.

The quality factor emphasizes companies that are high in profitability and low in investment spending.

The momentum factor emphasizes stocks with high momentum.

The size factor is the equal weight of the small company portions, based on a company's fundamental weight, of the other four factors. A company's fundamental weight may be adjusted by a "free float factor," which is the ratio of the total market capitalization of the shares of the company in free float to the total market capitalization of the company.

For the value, low volatility, and quality "factor portfolios," eligible securities are ranked by their factor score, and the top 25% of companies by fundamental weight are selected for inclusion within that "factor portfolio." For the momentum "factor portfolio," eligible securities are ranked by their momentum score and the top 50% of companies by fundamental weight are selected for inclusion.

The Index is reconstituted on an annual basis and rebalanced on a quarterly basis. As of December 31, 2019, the Index consisted of 887 Component Securities. The Index allocates an equal weight to each factor at each quarterly rebalance. Each factor (other than momentum) is reconstituted annually on the last business day of March and rebalanced on a quarterly staggered basis on the last business day of March, June, and September and the third Friday of December. This staggered rebalancing is intended to diversify risk and decrease market impact. The momentum factor, unlike the other factors, is reconstituted and fully rebalanced quarterly.

The Sub-Adviser uses a "passive" or "indexing" approach to try to achieve the Fund's investment objective. The Fund does not employ traditional methods of active investment management, which involves the buying and selling of securities based upon security analysis.

The Fund may invest in financial futures, a type of derivative that may be used to obtain exposure to a variety of underlying assets, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective. The Fund's use of financial futures is intended to assist replicating the investment performance of the Index.

The Fund may also invest in exchange-traded funds ("ETFs") to assist with index rebalances and to meet redemption or purchase requests. The Fund's holdings are rebalanced on a regular basis to reflect changes in the composition of the Index.

The Fund may invest, without limitation, in U.S. equity and equity-related securities, including common and preferred securities. In addition to futures, as described above, the Fund may also invest in other derivative instruments, such as options or swap agreements.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- License termination risk The Fund may rely on licenses from a third party (licensor) that permit the Fund to use that party's intellectual property in connection with the Fund's name and/or investment strategies. The license may be terminated by the licensor, and as a result the Fund may lose its ability to use the licensed name or strategy, or receive important data from the licensor. Accordingly, a license may have a significant effect on the future operation of the Fund, including the need to change the investment strategy.
- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's shares, changes in the composition of the index, and the Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.
- Limited management, trading cost and rebalance risk Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage

risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.

- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

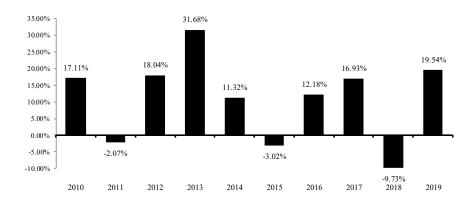

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's predecessor fund's (JNL/Mellon Capital JNL 5 Fund performance from year to year and by showing how the Fund's predecessor fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the predecessor fund. Performance prior to June 24, 2019 reflects the predecessor fund's results when the predecessor fund's primary benchmark was the S&P 500 Index. Effective June 24, 2019, for consistency with the Fund's principal investment strategy, the Fund's primary benchmark became the RAFI® Multi-Factor U.S. Index. The predecessor fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The Fund commenced operations on June 24, 2019. Performance shown below is from the JNL/Mellon Capital JNL 5 Fund, a series of JNL Variable Fund LLC, for below periods before the Fund's registration statement became effective.

^{*} Prior to April 29, 2019, the Fund Management team information shown is for the JNL/Mellon Capital JNL 5 Fund, the Fund's predecessor fund.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/T. Rowe Price Balanced Fund

(formerly, JNL/T. Rowe Price Managed Volatility Balanced Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objectives. The investment objective of the Fund is to seek capital growth, current income, and preservation of capital through a portfolio of stocks and fixed-income securities.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.55%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Total Annual Fund Operating Expenses	1.00%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. The impact of this waiver was less than 0.01% for the previous fiscal year.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/T. Rowe Price Balanced Fund Class A				
1 year 3 years 5 years 10 years				
\$102 \$318 \$552 \$1,225				

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	82%

Principal Investment Strategies. The Fund normally invests approximately 65% of its total assets in common stocks and 35% in fixed income securities. The Fund will invest at least 25% of its total assets in fixed income senior securities and may invest up to 35% of its total assets in foreign securities.

The Fund has significant flexibility to invest in a broad range of equity, fixed income, and alternative asset classes in the U.S. and other markets throughout the world, both developed and emerging.

When deciding upon overall allocations between stocks and fixed income securities, T. Rowe Price Associates, Inc. ("Sub-Adviser") may favor fixed income securities if the economy is expected to slow sufficiently to hurt corporate profit growth. When strong economic growth is expected, the Sub-Adviser may favor stocks. The Fund will invest in bonds, including foreign issues, which are primarily investment grade (i.e., assigned one of the four highest credit ratings by established credit rating agencies) and are chosen from across the entire government, corporate, and asset- and mortgage-backed securities markets. Maturities generally reflect the Sub-Adviser's outlook for interest rates. The Fund may at times invest significantly in certain sectors.

When selecting particular stocks, the Sub-Adviser will examine relative values and prospects among growth- and value-oriented stocks, domestic and international stocks, small- to large-cap stocks, and stocks of companies involved in activities related to commodities and other real assets. Domestic stocks are drawn from the overall U.S. market and international stocks are selected primarily from large companies in developed countries, although stocks in emerging markets may also be purchased. This process draws heavily upon the Sub-Adviser's proprietary stock research expertise. While the Fund maintains a well-diversified portfolio, the Sub-Adviser may at a particular time shift stock selection toward markets or market sectors that appear to offer attractive value and appreciation potential.

A similar security selection process applies to bonds. When deciding whether to adjust duration, credit risk exposure, or allocations among the various sectors (for example, high yield "junk" bonds, mortgage- and asset-backed securities, international bonds and emerging market bonds), the Sub-Adviser weighs such factors as the outlook for inflation and the economy, corporate earnings, expected interest rate movements and currency valuations, and the yield advantage that lower-rated bonds may offer over investment grade bonds.

In pursuing its investment objective, the Fund has the discretion to deviate from its normal investment criteria. These situations might arise when the Sub-Adviser believes a security could increase in value for a variety of reasons, including an extraordinary corporate event, a new product introduction or innovation, a favorable competitive development, or a change in management.

Securities may be sold for a variety of reasons, such as to effect a change in asset allocation, secure a gain, limit a loss, or redeploy assets into more promising opportunities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

• Equity securities risk – Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the

Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Extension risk When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- Prepayment risk During periods of falling interest rates, a debt security with a high interest rate may be prepaid before its expected maturity date. The Fund may have to reinvest the proceeds in an investment that may have lower yields than the yield on the prepaid debt security. In addition, prepayment rates are difficult to predict and the potential impact of prepayment on the price of a debt instrument depends on the terms of the instrument.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.

- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to August 13, 2018, reflects the Fund's results when managed by the former sub-adviser, Milliman Financial Risk Management LLC. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

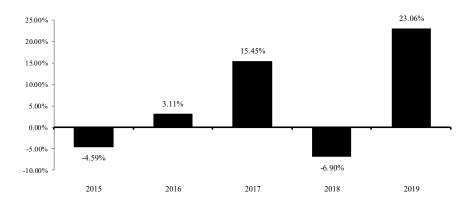

Effective June 24, 2019, the Fund was combined with JNL/AQR Risk Parity Fund (the "Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderate Index with the Morningstar Moderate Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 45% S&P 500 Index, 20% MSCI EAFE Index (Net), 35% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/T. Rowe Price Capital Appreciation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term capital appreciation by investing primarily in common stocks. It may also hold fixed income and other securities to help preserve principal value.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.53%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Total Annual Fund Operating Expenses	0.98%	

¹ "Other Expenses" include an Administrative Fee of 0.14% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. The impact of this waiver was less than 0.01% for the previous fiscal year.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through

which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/T. Rowe Price Capital Appreciation Fund Class A				
1 year	3 years	5 years	10 years	
\$100 \$312 \$542 \$1,201				

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	50%

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 50% of its total assets in common stocks. The remaining assets are generally invested in convertible securities, corporate and government debt (including mortgage- and asset-backed securities), bank loans (which represent an interest in amounts owed by a borrower to a syndicate of lenders), and foreign securities, in keeping with the Fund's objective. The Fund has significant flexibility to invest in a broad range of equity and fixed income securities. The Fund may invest up to 25% of its total assets in foreign securities.

The Fund's investments in common stocks generally fall into one of two categories: the larger category comprises long-term core holdings whose prices when T. Rowe Price Associates, Inc., the Fund's sub-adviser ("Sub-Adviser") buys them are considered low in terms of company assets, earnings, or other factors; the smaller category comprises opportunistic investments whose prices the Sub-Adviser expects to rise in the short term but not necessarily over the long term. There are no limits on the market capitalization of the issuers of the stocks in which the Fund may invest. Because the Sub-Adviser attempts to prevent losses as well as achieve gains, the Sub-Adviser typically uses a value approach in selecting investments. The Sub-Adviser's research team seeks to identify companies that seems undervalued by various measures, such as price/book value, and may be temporarily out of favor but the Sub-Adviser believes have good prospects for capital appreciation. The Sub-Adviser may establish relatively large positions in companies it finds particularly attractive. The Fund may at times invest significantly in certain sectors.

The Sub-Adviser seeks to reduce risk and to maximize gains and may seek to realize gains rather than lose them in market declines. In addition, the Sub-Adviser searches for attractive risk/reward values among all types of securities. The portion of the Fund invested in a particular type of security, such as common stocks, results largely from case-by-case investment decisions, and the size of the Fund's cash reserves may reflect the Sub-Adviser's ability to find companies that meet its valuation criteria rather than its market outlook.

The Fund may purchase bonds, convertible securities and bank loans for their income or other features or to gain additional exposure to a company. Maturity and quality are not necessarily major considerations, and there are no limits on the maturities or credit ratings of the debt instruments in which the Fund may invest. The Fund may not invest more than 25% of its total assets in below investment-grade debt securities ("junk bonds") and bank loans combined. If a security is split rated (i.e., rated investment grade by at least one rating agency and noninvestment grade by another rating agency), the higher rating will be used for purposes of this requirement. The Fund may invest up to 10% of total assets in mortgage- and asset-backed securities. The Fund may also write (i.e., sell) call options, primarily in an effort to protect against downside risk or to generate additional income.

The Fund may sell securities for a variety of reasons, such as to secure gains, limit losses, or redeploy assets into what the Sub-Adviser believes are more promising opportunities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially

those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Convertible securities risk Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Corporate loan, sovereign entity loan, and bank loan risk Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Options risk If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.

- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of a security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- *Managed portfolio risk* As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Fund's Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.

- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- *Volatility risk* The Fund may have investments that appreciate or depreciate significantly in value over short periods of time. This may cause the Fund's net asset value per share to experience significant appreciations or depreciations in value over short periods of time.
- LIBOR replacement risk In addition to other interbank offered rates, the most common benchmark rate for floating rate securities is London Interbank Offered Rate (LIBOR), which is the rate of interest offered on short-term interbank deposits, as determined by trading between major international banks. The UK Financial Conduct Authority has announced that LIBOR rates will no longer be published after the end of 2021. The elimination of LIBOR may adversely affect the interest rates on, and value of, certain Fund investments for which the value is tied to LIBOR. Alternatives to LIBOR are established or in development in most major currencies, including the Secured Overnight Financing Rate (SOFR) that is intended to replace U.S. dollar LIBOR. Markets are slowly developing in response to these new reference rates. However, questions around the rate transition's effect on the liquidity of securities and how to appropriately adjust these rates at the time of transition remain undetermined for the Fund. The effects of discontinuation of LIBOR on the Fund will vary, and it is difficult to predict the full impact of the transition away from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new products, instruments and contracts are commercially accepted and market practices become more settled.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

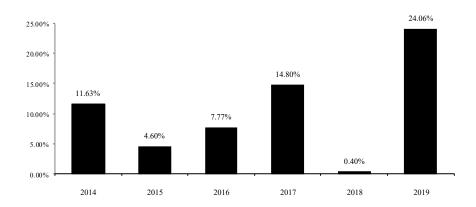

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/T. Rowe Price Capital Appreciation Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Consistent with the Fund's principal investment strategies, the Fund uses the 60% S&P 500 Index, 40% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

JNL/T. Rowe Price Established Growth Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is long-term capital growth through investments in stocks.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.43%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.10%	
Total Annual Fund Operating Expenses	0.83%	

¹ "Other Expenses" include an Administrative Fee of 0.09% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. The impact of this waiver was less than 0.01% for the previous fiscal year.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/T. Rowe Price Established Growth Fund Class A			
1 year	3 years	5 years	10 years
\$85	\$265	\$460	\$1,025

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	25%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing generally in common stocks of large-capitalization companies. T. Rowe Price Associates, Inc. ("Sub-Adviser") generally seeks investments in stocks of large-capitalization companies, which the Sub-Adviser defines as a company whose market capitalization is larger than the median market capitalization of companies in the Russell 1000 Growth Index, and that has one or more of the following characteristics: strong cash flow and an above-average rate of earnings growth; the ability to sustain earnings momentum during economic downturns; and occupation of a lucrative niche in the economy and the ability to expand even during times of slow economic growth. While the Fund invests typically in U.S. common stocks, other securities may also be purchased, including foreign stocks, futures and options, in keeping with Fund objectives. The Fund may at times invest significantly in technology stocks.

The Fund may invest up to 30% of its total assets (excluding reserves) in foreign securities, including securities and instruments that are economically tied to emerging markets.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are

tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Options risk If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.

- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.

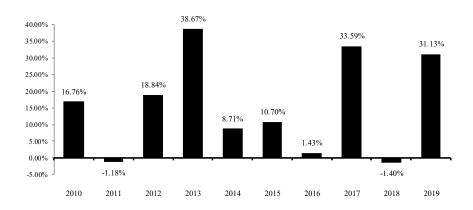

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Index as the Fund's secondary benchmark.

JNL/T. Rowe Price Short-Term Bond Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is a high level of income consistent with minimal fluctuation in principal value and liquidity.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.31%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.10%	
Total Annual Fund Operating Expenses	0.71%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. The impact of this waiver was less than 0.01% for the previous fiscal year.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through

which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/T. Rowe Price Short-Term Bond Fund Class A			
1 year	3 years	5 years	10 years
\$73	\$227	\$395	\$883

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	71%

Principal Investment Strategies. The Fund will invest in a diversified portfolio of short- and intermediate-term investment-grade corporate, government, and asset- and mortgage-backed securities. The Fund may also invest in money market securities, bank obligations, collateralized mortgage obligations, and foreign securities, including securities of issuers in emerging markets. Normally, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in bonds. The Fund's average effective maturity will normally not exceed three (3) years. The Fund will only purchase securities that are rated within one of the four highest credit categories (e.g. AAA, AA, A, BBB, or equivalent) at the time of purchase by at least one major credit rating agency or, if unrated, deemed to be of comparable quality by T. Rowe Price Associates, Inc. ("Sub-Adviser"). The Fund may continue to hold a security that has been downgraded after purchase.

Within this broad structure, investment decisions generally reflect the Sub-Adviser's outlook for interest rates and the economy as well as the prices, yields and credit quality of the various securities. For example, if the Sub-Adviser expects interest rates to fall, it may purchase longer-term securities (within the framework of the Fund's investment program) in an attempt to seek higher yields and/or capital appreciation. Conversely, if the Sub-Adviser expects interest rates to rise, the Fund may seek securities with shorter maturities.

In keeping with the Fund's objective, it may also invest in other securities and use futures, options, swaps, and other derivative-type instruments.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign

markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- Extension risk When interest rates rise, certain obligations will be paid off by the obligor more slowly than anticipated, which may cause the value of those securities to fall. Rising interest rates tend to extend the duration of securities, making them more sensitive to changes in interest rates. The value of longer-term securities generally changes more in response to changes in interest rates than shorter-term securities. As a result, in a period of rising interest rates, securities may exhibit additional volatility and may lose value.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Swaps risk Swap agreements are subject to the risks of derivatives, including risk that the party with whom the Fund has entered into the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the other party to the agreement. Swap agreements historically have been OTC, two-party contracts entered into primarily by institutional investors for periods typically ranging from a few weeks to more than one year. In a standard swap transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments, which may be adjusted for an interest factor. There are various types of swaps, including but not limited to, total return swaps, credit default swaps and interest rate swaps; all of these and other swaps are derivatives and as such, each is subject to the general risks relating to derivatives described herein. The Dodd–Frank Act mandates a new regulatory framework for trading swaps in the United States. Standardized swaps will be required to be executed on or subject to the rules of designated contract markets or swap execution facilities and cleared by a central counterparty, a derivatives clearing organization ("DCO"). Central clearing is intended to reduce the risk of default by the counterparty. However, central clearing may increase the costs of swap transactions by requiring the posting of initial and variation margin. There may also be risks introduced of a possible default by the DCO or by a clearing member or futures commission merchant through which a swap is submitted for clearing. The regulations to implement the Dodd-Frank Act are still being developed so there may be further changes to the system intended to safeguard the collateral of parties to swaps.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Income risk* The Fund is subject to the risk that the income generated from the Fund's investments may decline in the event of falling interest rates. Income risk may be high if the Fund's income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund's distributions to shareholders may decline when interest rates fall.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal

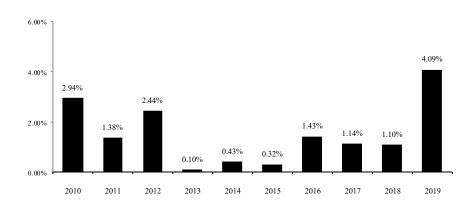

place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/T. Rowe Price U.S. High Yield Fund (formerly, JNL/Crescent High Income Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek total return, and secondarily, current income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.52%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses ³	0.98%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

³ Expense information has been restated to reflect current fees.

Board of Trustees approves a change in or elimination of the waiver. The impact of this waiver was less than 0.01% for the previous fiscal year.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/T. Rowe Price U.S. High Yield Fund Class A			
1 year	3 years	5 years	10 years
\$100	\$312	\$542	\$1,201

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	87%

Portfolio turnover for the period of January 1, 2019 to December 31, 2019 is from the prior sub-adviser, Crescent Capital Group LP.

Principal Investment Strategies. The Fund normally invests at least 80% of its net assets (including any borrowings for investment purposes) in U.S. high yield instruments (commonly referred to as "junk" bonds), which are debt instruments that are, at the time of purchase, rated below investment grade by a credit rating agency (i.e., Baa3 by Moody's Investors Service, Inc. or below BBB- by S&P Global Ratings or Fitch Ratings, Inc.), or, if not rated by any major credit rating agency, deemed to be below investment grade by T. Rowe Price Associates, Inc. ("Sub-Adviser"). The Fund considers U.S. high yield instruments to include noninvestment-grade bonds, bank loans, and other debt instruments issued by U.S. issuers, as well as bonds denominated in U.S. dollars that are issued by foreign banks and corporations and registered with the SEC for sale in the U.S. (such as Yankee bonds). If a holding is split rated (i.e., rated investment grade by at least one rating agency and below investment grade by another rating agency), the lower rating will be used for purposes of the Fund's 80% investment policy. The Fund focuses its investments on high yield corporate bonds but may also invest in other income producing instruments including bank loans, convertible securities, and preferred stocks. In selecting bonds, the Sub-Adviser generally evaluates the income provided by the bond and the bond's appreciation potential, as well as the issuer's ability to make income and principal payments.

High yield instruments tend to provide high income in an effort to compensate investors for their higher risk of default, which is the failure to make required interest or principal payments. High yield bond issuers include small or relatively new companies lacking the history or capital to merit investment grade status, former blue-chip companies downgraded because of financial problems, companies electing to borrow heavily to finance or avoid a takeover or buyout, and firms with heavy debt loads.

While high yield corporate bonds are typically issued with a fixed interest rate, bank loans have floating interest rates that reset periodically (typically quarterly or monthly). Bank loans represent amounts borrowed by companies or other entities from banks and other lenders. In many cases, the borrowing companies have significantly more debt than equity and the loans have been issued in connection with recapitalizations, acquisitions, leveraged buyouts, or refinancings. The loans held by the Fund may be senior or subordinate obligations of the borrower. The Fund may invest up to 15% of its total assets in bank loans.

The Fund may purchase securities of any maturity, and its weighted average maturity and duration will vary with market conditions.

While most assets will typically be invested in U.S. issued instruments and U.S. dollar-denominated instruments, the Fund may also invest in non-U.S. dollar-denominated bonds of foreign issuers (including securities of issuers in emerging markets). The Fund may invest up to 20% of its total assets in non-U.S. dollar-denominated foreign instruments.

While most assets will typically be invested directly in bonds and other debt instruments, the Fund may buy or sell credit default swaps involving a specific issuer or an index in order to adjust the Fund's overall credit quality, to protect against fluctuations in the prices of certain holdings, to gain exposure to a particular issuer or security, or to manage certain investment risks such as changes in an issuer's creditworthiness.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Credit risk* The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Convertible securities risk Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- Preferred stock risk Preferred stock represents an equity interest in a company that generally entitles the holder to receive, in preference to the holders of other stocks such as common stocks, dividends and a fixed share of the proceeds resulting from a liquidation of the company.
- Corporate loan, sovereign entity loan, and bank loan risk Commercial banks, sovereign entities, and other financial institutions or institutional investors make corporate loans to companies or sovereign entities that need capital to grow, restructure, or for infrastructure projects. These instruments are commonly referred to as "loans" or "bank loans." Borrowers generally pay interest on corporate loans at "floating" rates that change in response to changes in market interest rates such as the London Interbank Offered Rate ("LIBOR") or the prime rates of U.S. banks. As a result, the value of such loan investments is generally less exposed to the adverse effects of interest rate fluctuations than investments that pay a fixed rate of interest. However, the market for certain loans may not be sufficiently liquid, and the Fund may have difficulty selling them. It may take longer than seven days for transactions in loans to settle. Certain loans may be classified as "illiquid" securities. Additionally, because a loan may not be considered a security, the Fund may not be afforded the same legal protections afforded securities under federal securities laws. Thus, the Fund generally must rely on contractual provisions in the loan agreement and common-law fraud protections under applicable state law.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.

- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Call risk Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates.
- LIBOR replacement risk In addition to other interbank offered rates, the most common benchmark rate for floating rate securities is London Interbank Offered Rate (LIBOR), which is the rate of interest offered on short-term interbank deposits, as determined by trading between major international banks. The UK Financial Conduct Authority has announced that LIBOR rates will no longer be published after the end of 2021. The elimination of LIBOR may adversely affect the interest rates on, and value of, certain Fund investments for which the value is tied to LIBOR. Alternatives to LIBOR are established or in development in most major currencies, including the Secured Overnight Financing Rate (SOFR) that is intended to replace U.S. dollar LIBOR. Markets are slowly developing in response to these new reference rates. However, questions around the rate transition's effect on the liquidity of securities and how to appropriately adjust these rates at the time of transition remain undetermined for the Fund. The effects of discontinuation of LIBOR on the Fund will vary, and it is difficult to predict the full impact of the transition away from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new products, instruments and contracts are commercially accepted and market practices become more settled.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to April 27, 2020 reflects the Fund's results when managed by the former sub-adviser, Crescent Capital Group LP. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

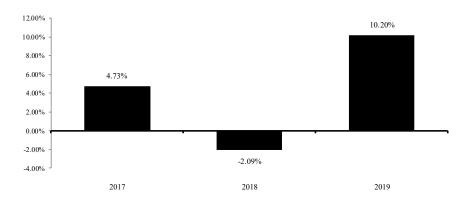

Effective June 24, 2019, the Fund was combined with JNL/BlackRock Global Long Short Credit Fund (the "Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective April 27, 2020, for consistency with the Fund's principal investment strategies, the Fund will replace the ICE Bank of America Merrill Lynch U.S. High Yield Cash Pay BB-B 1-5 Year Index with the ICE Bank of America Merrill Lynch U.S. High Yield Constrained Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 50% ICE Bank of America Merrill Lynch U.S. High Yield Master II Index, 50% S&P/LSTA Leveraged Loan Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/T. Rowe Price Value Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to provide long-term capital appreciation by investing in common stocks believed to be undervalued. Income is a secondary objective.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses	
(Expenses that you pay each year as a percentage of the value of your in	vestment)
	Class A
Management Fee	0.47%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ¹	0.10%
Total Annual Fund Operating Expenses ²	0.87%

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

JNAM has contractually agreed to waive a portion of the Fund's management fee in an amount equal to 100% of the net advisory fees payable to an affiliate of the sub-adviser attributable to the Fund's investment in funds managed by that affiliate. The waiver will have the effect of reducing the Acquired Fund Fees and Expenses that are indirectly borne by the Fund. The waiver will continue for at least one year from the date of this Prospectus, so long as the sub-advisory agreement remains in effect, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. The impact of this waiver was less than 0.01% for the previous fiscal year.

² Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. The example does not reflect the voluntary fee waiver. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/T. Rowe Price Value Fund Class A			
1 year	3 years	5 years	10 years
\$89	\$278	\$482	\$1,073

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	133%

Principal Investment Strategies. In taking a value approach to investment selection, at least 65% of the Fund's total assets will normally be invested in common stocks that T. Rowe Price Associates, Inc. ("Sub-Adviser") regards as undervalued. Stock holdings are expected to consist primarily of large-company stocks, but may also include mid-cap and small-cap companies. The Sub-Adviser's research team seeks to identify companies that appear to be undervalued by various measures and may be temporarily out of favor, but which the Sub-Adviser believes have good prospects for capital appreciation.

The Fund may invest up to 25% of its total assets (excluding reserves) in foreign securities, including securities that are economically tied to emerging markets. The Fund may at times invest significantly in certain sectors.

In keeping with the Fund's objective, it may also invest in other securities and use futures, options, swaps, and other derivative-type instruments.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Mid-capitalization and small-capitalization investing risk* The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *Portfolio turnover risk* Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.

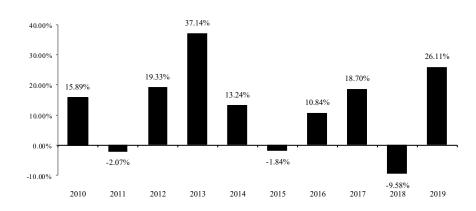

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place,

performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

Class A

Best Quarter (ended 3/31/2013): 12.88%; Worst Quarter (ended 9/30/2011): -17.41%

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the

Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Vanguard Capital Growth Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The JNL/Vanguard Capital Growth Fund ("Fund" or "Feeder Fund") seeks long-term capital appreciation through exclusive investment in the shares of the Vanguard Variable Insurance Fund Capital Growth Portfolio ("Master Fund").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A ¹	
Management Fee	0.85%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ²	0.11%	
Total Annual Fund Operating Expenses ³	1.26%	
Less Waiver/Reimbursement ⁴	0.33%	
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	0.93%	

- ¹ The fee table and the example reflect the expenses of both the Fund and the Master Fund.
- ² "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ³ Expense information has been restated to reflect current fees.
- ⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

Expense Example. (1) This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Vanguard Capital Growth Fund Class A			
1 year	3 years	5 years	10 years
\$95	\$367	\$660	\$1,494

⁽¹⁾ The example reflects the aggregate expenses of both the Fund and the Master Fund.

Portfolio Turnover (% of average value of portfolio). The Fund, which operates as a "feeder fund," does not pay transaction costs, such as commissions, when it buys and sells shares of the Master Fund (or "turns over" its portfolio). The Master Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's and Master Fund's performance. The following table shows the Master Fund's portfolio turnover rate during the most recent fiscal year.

Period	Master Fund
1/1/2019 - 12/31/2019	5%

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes), if not all its assets, in shares of the Master Fund.

The Master Fund invests in stocks considered to have above-average earnings growth potential that is not reflected in their current market prices. The Master Fund consists predominantly of large- and mid-capitalization stocks.

The Master Fund may invest up to 25% of its assets in foreign securities, which may include depositary receipts.

Foreign securities may be traded on U.S. or foreign markets.

The portion of the Master Fund's assets invested in a particular market sector or industry may be significantly larger or smaller than that sector's or industry's proportion in the overall stock market. The Master Fund tends to invest a high percentage of its assets in its ten largest holdings.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

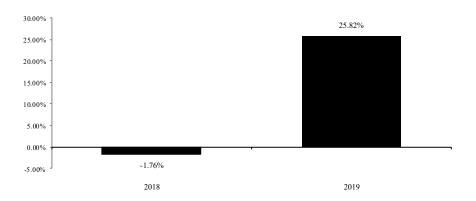

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Managed portfolio risk As an actively managed portfolio, the value of the Master Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Master Fund's Adviser's investment techniques could fail to achieve the Master Fund's investment objective or negatively affect the Master Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Vanguard Equity Income Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;

- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The JNL/Vanguard Equity Income Fund ("Fund" or "Feeder Fund") seeks to provide an above-average level of current income and reasonable long-term capital appreciation through exclusive investment in the shares of the Vanguard Variable Insurance Fund Equity Income Portfolio ("Master Fund").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)	
<u></u>	Class A ¹
Management Fee	0.81%
Distribution and/or Service (12b-1) Fees	0.30%
Other Expenses ²	0.12%
Total Annual Fund Operating Expenses ³	1.23%
Less Waiver/Reimbursement ⁴	0.34%
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	0.89%

- ¹ The fee table and the example reflect the expenses of both the Fund and the Master Fund.
- ² "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ³ Expense information has been restated to reflect current fees.
- ⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

Expense Example. (1) This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Vanguard Equity Income Fund Class A			
1 year	3 years	5 years	10 years
\$91	\$357	\$643	\$1,459

⁽¹⁾ The example reflects the aggregate expenses of both the Fund and the Master Fund.

Portfolio Turnover (% of average value of portfolio). The Fund, which operates as a "feeder fund," does not pay transaction costs, such as commissions, when it buys and sells shares of the Master Fund (or "turns over" its portfolio). The Master Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's and Master Fund's performance. The following table shows the Master Fund's portfolio turnover rate during the most recent fiscal year.

Period	Master Fund
1/1/2019 - 12/31/2019	33%

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes), if not all its assets, in shares of the Master Fund.

The Master Fund invests mainly in common stocks of mid-size and large companies whose stocks typically pay above-average levels of dividend income and are, in the opinion of the purchasing Master Fund Adviser (defined below), undervalued relative to similar stocks. In addition, the Master Fund's advisers, The Vanguard Group, Inc. ("Vanguard") and Wellington Management Company LLP ("Wellington") (collectively, "Master Fund Advisers") generally look for companies that they believe are committed to paying dividends consistently. Under normal circumstances, the Master Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities.

The Master Fund may invest up to 25% of its assets in foreign securities.

The Master Fund Advisers employ active investment management methods, which means that securities are bought and sold according to the Master Fund Advisers' evaluations of companies and their financial prospects, the prices of the securities, and the stock market and the economy in general. Each Master Fund Adviser independently selects and maintains a portfolio of common stocks for the Master Fund.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an

industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

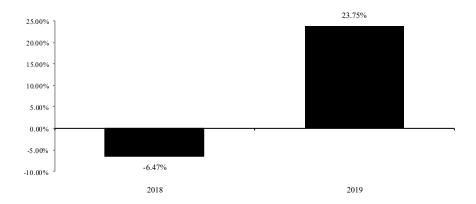

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Managed portfolio risk As an actively managed portfolio, the value of the Master Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Master Fund's Advisers' investment techniques could fail to achieve the Master Fund's investment objective or negatively affect the Master Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Vanguard International Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The JNL/Vanguard International Fund ("Fund" or "Feeder Fund") seeks to provide long-term capital appreciation through exclusive investment in the shares of the Vanguard Variable Insurance Fund International Portfolio ("Master Fund").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

⁽¹⁾ The example reflects the aggregate expenses of both the Fund and the Master Fund.

Portfolio Turnover (% of average value of portfolio). The Fund, which operates as a "feeder fund," does not pay transaction costs, such as commissions, when it buys and sells shares of the Master Fund (or "turns over" its portfolio). The Master Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's and Master Fund's performance. The following table shows the Master Fund's portfolio turnover rate during the most recent fiscal year.

Period	Master Fund
1/1/2019 - 12/31/2019	14%

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes), if not all its assets, in shares of the Master Fund.

The Master Fund invests predominantly in the stocks of companies located outside the United States and is expected to diversify its assets in countries across developed and emerging markets. In selecting stocks, the Master Fund's investment advisers, Baillie Gifford Overseas Ltd. ("Baillie Gifford") and Schroder Investment Management North America Inc. ("Schroders") (each a "Master Fund Adviser," collectively, "Master Fund Advisers"), evaluate foreign markets around the world and choose large-, mid-, and small-capitalization companies considered to have above-average growth potential.

The Master Fund Advisers employ active investment management methods, which means that securities are bought and sold according to the Master Fund Advisers' evaluations of companies and their financial prospects, the prices of the securities, and the stock market and the economy in general. Each Master Fund Adviser independently selects and maintains a portfolio of common stocks for the Master Fund.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related

securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Managed portfolio risk As an actively managed portfolio, the value of the Master Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Master Fund's Adviser's investment techniques could fail to achieve the Master Fund's investment objective or negatively affect the Master Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

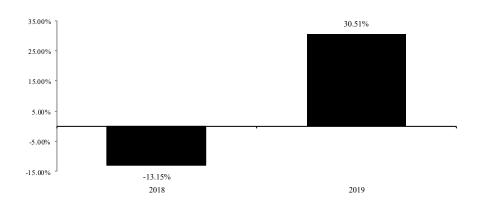

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place,

performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Vanguard Small Company Growth Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The JNL/Vanguard Small Company Growth Fund ("Fund" or "Feeder Fund") seeks to provide long-term capital appreciation through exclusive investment in the shares of the Vanguard Variable Insurance Fund Small Company Growth Portfolio ("Master Fund").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A ¹	
Management Fee	0.93%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ²	0.11%	
Total Annual Fund Operating Expenses ³	1.34%	
Less Waiver/Reimbursement ⁴	0.35%	
Total Annual Fund Operating Expenses After Waiver/Reimbursement ³	0.99%	

- $^{1\,}$ The fee table and the example reflect the expenses of both the Fund and the Master Fund.
- ² "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ³ Expense information has been restated to reflect current fees.
- ⁴ JNAM has entered into a contractual agreement with the Fund under which it will waive a portion of its management fee for such time as the Fund is operated as a Feeder Fund, because during that time, the Adviser will not be providing the portfolio management portion of the advisory and management services. This fee waiver will continue as long as the Fund is part of a master-feeder fund structure, but in any event, the waiver will continue for at least one year from the date of this Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver.

Expense Example. ⁽¹⁾ This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Vanguard Small Company Growth Fund Class A					
1 year	1 year 3 years 5 years 10 years				
\$101 \$390 \$701 \$1,582					

⁽¹⁾ The example reflects the aggregate expenses of both the Fund and the Master Fund.

Portfolio Turnover (% of average value of portfolio). The Fund, which operates as a "feeder fund," does not pay transaction costs, such as commissions, when it buys and sells shares of the Master Fund (or "turns over" its portfolio). The Master Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's and Master Fund's performance. The following table shows the Master Fund's portfolio turnover rate during the most recent fiscal year.

Period	Master Fund
1/1/2019 - 12/31/2019	58%

Principal Investment Strategies. The Fund operates as a "feeder fund" and seeks to achieve its goal by investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes), if not all its assets, in shares of the Master Fund.

Under normal circumstances the Master Fund invests at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) primarily in common stocks of small companies. These companies tend to be unseasoned but are considered by the Master Fund's advisers, The Vanguard Group, Inc. ("Vanguard") and ArrowMark Colorado Holdings, LLC ("ArrowMark") (each a "Master Fund Adviser," collectively, "Master Fund Advisers"), to have superior growth potential. Also, these companies often provide little or no dividend income. The Master Fund uses multiple investment advisers.

Although the Master Fund typically does not make significant investments in foreign securities, it reserves the right to invest up to 25% of its assets in foreign securities, which may include depositary receipts. Foreign securities may be traded on U.S. or foreign markets.

The Master Fund Advisers employ active investment management methods, which means that securities are bought and sold according to the Master Fund Advisers' evaluations of companies and their financial prospects, the prices of the securities, and the stock market and the economy in general. Each Master Fund Adviser independently selects and maintains a portfolio of common stocks for the Master Fund.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities.

Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

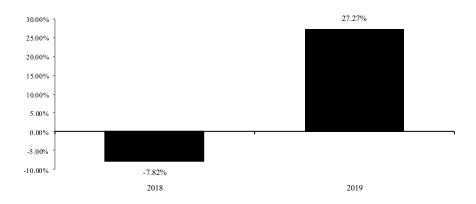

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Managed portfolio risk As an actively managed portfolio, the value of the Master Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Master Fund's Advisers' investment techniques could fail to achieve the Master Fund's investment objective or negatively affect the Master Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

Binbin Guo, Ph.D.	September 2017	Principal and Head of Equity Research and Portfolio Strategies of Vanguard's Quantitative Equity Group
		(Vanguard)

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Vanguard U.S. Stock Market Index Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)	Class A	
Management Fee	0.20%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.10%	
Acquired Fund Fees and Expenses ²	0.04%	
Total Annual Fund Operating Expenses ⁴	0.64%	
Less Waiver/Reimbursement ³	0.04%	
Total Annual Fund Operating Expenses After Waiver/Reimbursement ⁴	0.60%	

- ¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.
- ³ JNAM has contractually agreed to waive 0.04% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.
- ⁴ Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Vanguard U.S. Stock Market Index Fund Class A				
1 year 3 years 5 years 10 years				
\$61 \$201 \$353 \$795				

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	20%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Institutional Class shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the Vanguard U.S. Stock Index Large-Capitalization Funds, Vanguard U.S. Stock Index Small-Capitalization Funds, and Vanguard U.S. Stock Index Mid-Capitalization Funds ("Vanguard Funds"). Not all Funds of the Vanguard Funds are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund will allocate its assets to the following Underlying Funds:

- Vanguard Value Index Fund Institutional Shares;
- Vanguard Growth Index Fund Institutional Shares;
- Vanguard Large-Cap Index Fund Institutional Shares;
- Vanguard Total Stock Market Index Fund Institutional Shares;
- Vanguard Small-Cap Index Fund Institutional Shares; and
- Vanguard Mid-Cap Index Fund Institutional Shares.

Allocations to the Underlying Funds may vary in a volatile market environment where investment outcomes are expected to remain beyond normal range and when there are significant subscriptions or redemptions.

Within these allocations, the Fund remains flexible with respect to the percentage it will allocate among Underlying Funds.

Each Underlying Fund employs an indexing investment approach designed to passively track the performance of an index. Each of the Vanguard Value Index Fund, Vanguard Growth Index Fund, Vanguard Large-Cap Index Fund, Vanguard Small-Cap Index Fund, and Vanguard Mid-Cap Index Fund attempt to replicate the target index by investing all, or substantially all, of its assets in the stocks that make up the index, holding each stock in approximately the same proportion as its weighting in the index. The Vanguard Total Stock Market Index Fund invests by sampling the relevant index, meaning that it holds a broadly diversified collection of securities that, in the aggregate, approximates the full index in terms of key characteristics. These key characteristics include industry weightings and market capitalization, as well as certain financial measures, such as price/earnings ratio and dividend yield.

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

• Index investing risk — The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's/Underlying Fund's shares, changes in the composition of the index, and the Fund's/Underlying Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.

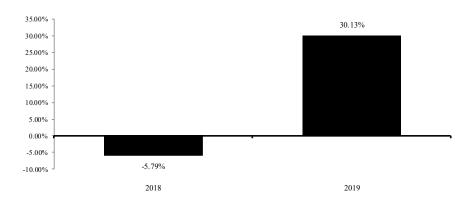

- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Annual Total Returns as of December 31

Class A

Jackson National Asset Management, LLC ("JNAM")

Portfolio Managers:

_	Joined Fund Management	
Name:	Team In:	Title:
William Harding, CFA	September 2017	Senior Vice President, Chief Investment Officer and Portfolio Manager, JNAM
Sean Hynes, CFA, CAIA	September 2017	Assistant Vice President and Portfolio Manager, JNAM
Mark Pliska, CFA	September 2017	Portfolio Manager, JNAM

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Vanguard International Stock Market Index Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.20%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Acquired Fund Fees and Expenses ²	0.08%	
Total Annual Fund Operating Expenses ⁴	0.73%	
Less Waiver/Reimbursement ³	0.03%	
Total Annual Fund Operating Expenses After Waiver/Reimbursement ⁴	0.70%	

- ¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.
- ³ JNAM has contractually agreed to waive 0.03% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.
- ⁴ Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Vanguard International Stock Market Index Fund Class A					
1 year 3 years 5 years 10 years					
\$72	\$230	\$403	\$904		

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	7%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the Vanguard FTSE All-World ex-US Index Fund, Vanguard FTSE All-World ex-US Small-Cap Index Fund, Vanguard International Stock Index Funds, Vanguard Developed Markets Index Fund, and Vanguard Total International Stock Index Fund ("Vanguard Funds"). Not all Funds of the Vanguard Funds are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund will allocate its assets to the following Underlying Funds:

- Vanguard Developed Markets Index Fund Institutional Plus Shares;
- Vanguard FTSE All-World ex-US Index Fund Institutional Shares;
- Vanguard European Stock Index Fund Institutional Shares;
- Vanguard Pacific Stock Index Fund Institutional Shares;
- Vanguard Emerging Markets Stock Index Fund Institutional Shares;
- Vanguard FTSE All-World ex-US Small-Cap Index Fund Admiral Shares; and
- Vanguard Total International Stock Index Fund Institutional Shares.

Allocations to the Underlying Funds may vary in a volatile market environment where investment outcomes are expected to remain beyond normal range and when there are significant subscriptions or redemptions.

Within these allocations, the Fund remains flexible with respect to the percentage it will allocate among Underlying Funds.

Each of Vanguard Developed Markets Index Fund and Vanguard FTSE All-World ex-US Index Fund employ an indexing investment approach designed to track the performance of an index; each fund attempts to replicate the target index by investing all, or substantially all, of its assets in the stocks that make up the index, holding each stock in approximately the same proportion as its weighting in the index.

Each of Vanguard European Stock Index Fund, Vanguard Pacific Stock Index Fund and Vanguard Total International Stock Index Fund employ an indexing investment approach by investing all, or substantially all, of its assets in the common stocks included in an index.

Vanguard Emerging Markets Stock Index Fund employs an indexing investment approach designed to track the performance of an index; the fund invests by sampling the index, meaning that it holds a broadly diversified collection of securities that, in the aggregate, approximates the index in terms of key characteristics. Such key characteristics include industry weightings and market capitalization, as well as certain financial measures, such as price/earnings ratio and dividend yield.

Vanguard FTSE All-World ex-US Small-Cap Index Fund employs an indexing investment approach designed to track the performance of an index; the fund attempts to sample the target index by investing all, or substantially all, of its assets in common stocks in the index and by holding a representative sample of securities that resembles the full index in terms of key risk factors and other characteristics. Such factors include industry weightings, country weightings, market capitalization, and other financial characteristics of stocks.

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- Index investing risk The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's/Underlying Fund's shares, changes in the composition of the index, and the Fund's/Underlying Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign

markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction

costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements. This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

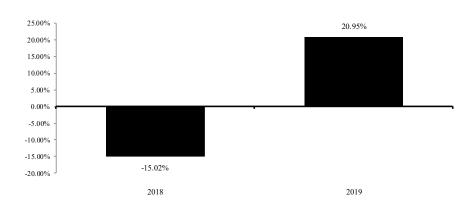

• Non-diversification risk – The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Vanguard Global Bond Market Index Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek a balance between current income and growth of capital.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)				
	Class A			
Management Fee	0.20%			
Distribution and/or Service (12b-1) Fees	0.30%			
Other Expenses ¹	0.15%			
Acquired Fund Fees and Expenses ²	0.07%			
Total Annual Fund Operating Expenses ⁴	0.72%			
Less Waiver/Reimbursement ³	0.06%			
Total Annual Fund Operating Expenses After Waiver/Reimbursement ⁴	0.66%			

- ¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.
- ³ JNAM has contractually agreed to waive 0.06% of the management fees of the Fund. The fee waiver will continue for at least one year from the date of the current Prospectus, and continue thereafter unless the Board of Trustees approves a change in or elimination of the waiver. This fee waiver is subject to yearly review and approval by the Board of Trustees.
- ⁴ Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Vanguard Global Bond Market Index Fund Class A					
1 year 3 years 5 years 10 years					
\$67	\$224	\$395	\$889		

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	23%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in shares of a diversified group of other funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest include funds that are a part of the Vanguard Sector Bond Index Funds, Vanguard Bond Index Funds, and Vanguard Total International Bond Index Fund ("Vanguard Funds"). Not all Funds of Vanguard Funds are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund will allocate its assets to the following Underlying Funds:

- Vanguard Total International Bond Index Fund Institutional Shares;
- Vanguard Total Bond Market Index Fund Institutional Shares;
- Vanguard Short-Term Bond Index Fund Institutional Shares;
- Vanguard Mortgage-Backed Securities Index Fund Institutional Shares;
- Vanguard Intermediate-Term Bond Index Fund Institutional Shares; and
- Vanguard Long-Term Bond Index Fund Institutional Shares.

Allocations to the Underlying Funds may vary in a volatile market environment where investment outcomes are expected to remain beyond normal range and when there are significant subscriptions or redemptions.

Within these allocations, the Fund remains flexible with respect to the percentage it will allocate among Underlying Funds.

Some of the Underlying Funds may utilize a number of derivatives, including forward foreign currency exchange contracts, in order to execute their investment strategy. Some of the Underlying Funds may also hold a significant amount of high-yield bonds, lower-rated bonds, and unrated securities, which are commonly referred to as "junk bonds," in order to execute their investment strategy.

Some of the Underlying Funds may invest in securities that have exposure to, or are economically tied to, emerging markets and less developed countries.

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

• Index investing risk – The Fund's indexing strategy does not attempt to manage volatility, use defensive strategies, or reduce the effects of any long-term periods of poor stock performance. Should a Fund engage in index sampling, the performance of the securities selected will not provide investment performance tracking that of the Index. Fund performance may not exactly correspond with the performance of the relevant index for a number of reasons, including, but not limited to: the timing of purchases and redemptions of the Fund's/Underlying Fund's shares, changes in the composition of the index, and the Fund's/Underlying Fund's expenses. Certain regulatory limitations, such as Fund diversification requirements, may limit the ability of a Fund to completely replicate an index.

- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.
- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.

- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying Fund to counterparty risk.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Forward foreign currency exchange contracts risk Forward foreign currency exchange contracts do not eliminate fluctuations in the value of non-U.S. securities but rather allow the Fund to establish a fixed rate of exchange for a future point in time. This strategy can have the effect of reducing returns and minimizing opportunities for gain.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- Small-capitalization investing risk Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Tracking error risk Tracking error is the divergence of the Fund's performance from that of the Index. The Fund's return may not track the return of the Index for a number of reasons. Tracking error may occur because of differences between the securities and other instruments held in the Fund's portfolio and those included in the Index, pricing differences, differences in transaction costs, the Fund's holding of uninvested cash, differences in timing of the accrual of or the valuation of dividends or interest, tax gains or losses, changes to the Index or the costs to the Fund of complying with various new or existing regulatory requirements.

This risk may be heightened during times of increased market volatility or other unusual market conditions. Tracking error also may result because the Fund incurs fees and expenses, while the Index does not. However, the Fund may be required to deviate its investments from the securities and relative weightings of the Index to comply with the 1940 Act, as amended to meet the issuer diversification requirements of the Internal Revenue Code of 1986, as amended, applicable to regulated investment companies, or as a result of local market restrictions, or other legal reasons, including regulatory limits or other restrictions on securities that may be purchased by the Investment Adviser and its affiliates.

• Non-diversification risk – The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

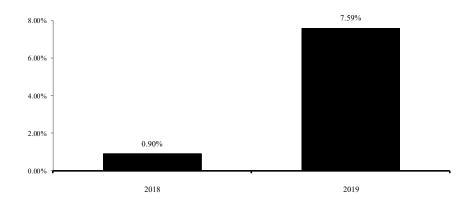

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the 50% Bloomberg Barclays Global Aggregate ex-USD Float Adjusted RIC Capped Index, 50% Bloomberg Barclays U.S. Aggregate Float Adjusted Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Vanguard Moderate ETF Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital through investment in exchange-traded funds ("Underlying ETFs").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses				
(Expenses that you pay each year as a percentage of the value of your investment)				
	Class A			
Management Fee	0.20%			
Distribution and/or Service (12b-1) Fees	0.30%			
Other Expenses ¹	0.15%			
Acquired Fund Fees and Expenses ²	0.06%			
Total Annual Fund Operating Expenses	0.71%			

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	JNL/Vanguard Moderate ETF Allocation Fund Class A				
	1 year	3 years	5 years	10 years	
Ī	\$73	\$227	\$395	\$883	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	20%

Principal Investment Strategies. Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified group of Underlying ETFs. An ETF is an investment fund that is traded on a stock exchange and holds an underlying basket of securities generally designed to track an index. ETFs can be bought and sold through the trading day in the secondary market or at net asset value directly with an authorized participant. The Underlying ETFs are affiliated with The Vanguard Group, Inc. Please refer to the statutory prospectus for a list of available Underlying ETFs.

The asset allocation of the Fund is determined through the use of a proprietary asset allocation model developed and managed by the Adviser in conjunction with third-party service providers. The asset allocation models provide initial guidance to specific asset allocations among various asset classes and sub-asset classes. Final allocations are determined by the Adviser through the use of both internal and external resources.

Mellon Investments Corporation ("Mellon"), the Fund's sub-adviser ("Sub-Adviser"), is responsible for managing the investment of portfolio assets solely according to the instructions (including the specific Underlying ETFs and the corresponding weights of such Underlying ETFs) provided by the Adviser. The Sub-Adviser executes transactions in the Underlying ETFs, as required, to closely replicate the allocation instructions received from the Adviser. The Fund's allocations are rebalanced periodically, generally monthly, based on the allocation instructions provided by the Adviser.

There are no geographic limitations to the Underlying ETFs' investments, and the Underlying ETFs may invest in securities of companies located in developed or emerging markets.

During the month, when cash inflows and outflows occur, the Sub-Adviser makes new purchases and sales based on the Fund's current existing market weights.

Under normal market conditions, the Adviser allocates approximately 30% to 50% (with a target allocation of 40%) of the Fund's assets to Underlying ETFs that invest primarily in equity securities and 50% to 70% (with a target allocation of 60%) of the Fund's assets to Underlying ETFs that invest primarily in fixed income securities and/or cash alternatives. The Adviser may also allocate the Fund's assets to securities and derivative contracts to meet the Fund's allocation targets.

The Fund may also invest in a range of securities and derivative contracts, including indexes, swap agreements, futures, currency forwards, and U.S. Treasury securities, and cash equivalents including, without limitation, commercial paper, repurchase agreements, and time deposits, as instructed by the Adviser.

The Sub-Adviser may invest in ETFs in excess of the Investment Company Act of 1940, as amended (the "1940 Act") limits on investment in other investment companies as instructed by the Adviser.

The Fund may invest, directly or indirectly, in illiquid or thinly traded securities.

The Fund may invest, directly or indirectly through ETFs, in bank loans.

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying ETFs include:

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying ETFs based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying ETFs.
- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying ETF Fund could decline if the financial condition of the companies an Underlying ETF Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Mid-capitalization and small-capitalization investing risk* The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks,

investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

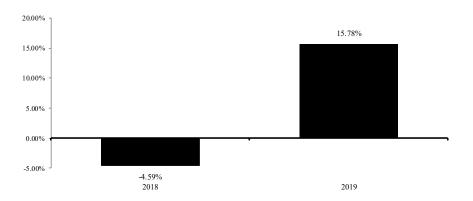

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Conservative Index with the Morningstar Moderately Conservative Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 40% MSCI All Country World Index (Net), 60% Bloomberg Barclays U.S. Aggregate Index as the Fund's secondary benchmark.

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a

variable annuity or life insurance contract issued by a separate account of Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Vanguard Moderate Growth ETF Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital through investment in exchange-traded funds ("Underlying ETFs").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.20%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Acquired Fund Fees and Expenses ²	0.06%	
Total Annual Fund Operating Expenses	0.71%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

expense limitation agreement is not renewed. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Vanguard Moderate Growth ETF Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$73	\$227	\$395	\$883

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	16%

Principal Investment Strategies. Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified group of Underlying ETFs. An ETF is an investment fund that is traded on a stock exchange and holds an underlying basket of securities generally designed to track an index. ETFs can be bought and sold through the trading day in the secondary market or at net asset value directly with an authorized participant. A list of such ETFs will be provided by the Adviser upon request.

The asset allocation of the Fund is determined through the use of a proprietary asset allocation model developed and managed by the Adviser in conjunction with third-party service providers. The asset allocation models provide initial guidance to specific asset allocations among various asset classes and sub-asset classes. Final allocations are determined by the Adviser through the use of both internal and external resources.

Mellon Investments Corporation ("Mellon"), the Fund's sub-adviser ("Sub-Adviser"), is responsible for managing the investment of portfolio assets solely according to the instructions (including the specific Underlying ETFs and the corresponding weights of such Underlying ETFs) provided by the Adviser. The Sub-Adviser executes transactions in the Underlying ETFs, as required, to closely replicate the allocation instructions received from the Adviser. The Fund's allocations are rebalanced periodically, generally monthly, based on the allocation instructions provided by the Adviser.

During the month, when cash inflows and outflows occur, the Sub-Adviser makes new purchases and sales based on the Fund's current existing market weights.

Under normal market conditions, the Adviser allocates approximately 50% to 70% (with a target allocation of 60%) of the Fund's assets to Underlying ETFs that invest primarily in equity securities and 30% to 50% (with a target allocation of 40%) of the Fund's assets to Underlying ETFs that invest primarily in fixed income securities and/or cash alternatives. The Adviser may also allocate the Fund's assets to securities and derivative contracts to meet the Fund's allocation targets.

The Fund may also invest in a range of securities and derivative contracts, including indexes, swap agreements, futures, currency forwards, and U.S. Treasury securities, and cash equivalents including, without limitation, commercial paper, repurchase agreements, and time deposits, as instructed by the Adviser.

There are no geographic limitations to the Underlying ETFs' investments, and the Underlying ETFs may invest in securities of companies located in developed or emerging markets.

The Sub-Adviser may invest in ETFs in excess of the Investment Company Act of 1940, as amended (the "1940 Act") limits on investment in other investment companies as instructed by the Adviser.

The Fund may invest, directly or indirectly, in illiquid or thinly traded securities.

The Fund may invest, directly or indirectly through ETFs, in bank loans.

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying ETFs include:

• *Allocation risk* – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate

- mix of asset classes and Underlying ETFs based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying ETFs.
- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying ETF Fund could decline if the financial condition of the companies an Underlying ETF Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Mid-capitalization and small-capitalization investing risk* The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified investment company.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

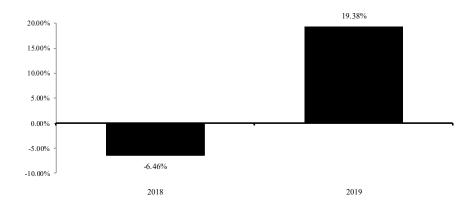

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderate Index with the Morningstar Moderate Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 60% MSCI All Country World Index (Net), 40% Bloomberg Barclays U.S. Aggregate Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a

fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Vanguard Growth ETF Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term growth of capital through investment in exchange-traded funds ("Underlying ETFs").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.20%	
Distribution and/or Service (12b-1) Fees	0.30%

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	12%

Principal Investment Strategies. Under normal market conditions, the Fund seeks to achieve its investment objective primarily through investing at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in a diversified group of Underlying ETFs. An ETF is an investment fund that is traded on a stock exchange and holds an underlying basket of securities generally designed to track an index. ETFs can be bought and sold through the trading day in the secondary market or at net asset value directly with an authorized participant. The Underlying ETFs are affiliated with The Vanguard Group, Inc. Please refer to the statutory prospectus for a list of available Underlying ETFs.

The asset allocation of the Fund is determined through the use of a proprietary asset allocation model developed and managed by the Adviser in conjunction with third-party service providers. The asset allocation models provide initial guidance to specific asset allocations among various asset classes and sub-asset classes. Final allocations are determined by the Adviser through the use of both internal and external resources.

Mellon Investments Corporation ("Mellon"), the Fund's sub-adviser ("Sub-Adviser"), is responsible for managing the investment of portfolio assets solely according to the instructions (including the specific Underlying ETFs and the corresponding weights of such Underlying ETFs) provided by the Adviser. The Sub-Adviser executes transactions in the Underlying ETFs, as required, to closely replicate the allocation instructions received from the Adviser. The Fund's allocations are rebalanced periodically, generally monthly, based on the allocation instructions provided by the Adviser.

During the month, when cash inflows and outflows occur, the Sub-Adviser makes new purchases and sales based on the Fund's current existing market weights.

Under normal market conditions, the Adviser allocates approximately 70% to 90% (with a target allocation of 80%) of the Fund's assets to Underlying ETFs that invest primarily in equity securities and 10% to 30% (with a target allocation of 20%) of the Fund's assets to Underlying ETFs that invest primarily in fixed income securities and/or cash alternatives. The Adviser may also allocate the Fund's assets to securities and derivative contracts to meet the Fund's allocation targets.

The Fund may also invest in a range of securities and derivative contracts, including indexes, swap agreements, futures, currency forwards, and U.S. Treasury securities, and cash equivalents including, without limitation, commercial paper, repurchase agreements, and time deposits, as instructed by the Adviser.

There are no geographic limitations to the Underlying ETFs' investments, and the Underlying ETFs may invest in securities of companies located in developed or emerging markets.

The Sub-Adviser may invest in ETFs in excess of the Investment Company Act of 1940, as amended (the "1940 Act") limits on investment in other investment companies as instructed by the Adviser.

The Fund may invest, directly or indirectly, in illiquid or thinly traded securities.

The Fund may invest, directly or indirectly through ETFs, in bank loans.

The Fund is a "non-diversified" fund, as defined in the Investment Company Act of 1940, as amended (the "1940 Act"), and may invest more of its assets in fewer issuers than "diversified" mutual funds.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying ETFs include:

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying ETFs based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying ETFs.
- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying ETF Fund could decline if the financial condition of the companies an Underlying ETF Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- *Mid-capitalization and small-capitalization investing risk* The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- *Interest rate risk* When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. an Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks,

investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Settlement risk Settlement risk is the risk that a settlement in a transfer system does not take place as expected. Loan transactions often settle on a delayed basis compared with securities and the Fund may not receive proceeds from the sale of a loan for a substantial period after the sale, potentially impacting the ability of the Fund to make additional investments or meet redemption obligations. It may take longer than seven days for transactions in loans to settle. In order to meet short-term liquidity needs, the Fund may draw on its cash or other short-term positions, maintain short-term or other liquid assets sufficient to meet reasonably anticipated redemptions, or maintain a credit facility.
- Counterparty risk Transactions involving a counterparty are subject to the credit risk of the counterparty. A Fund that enters into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lends its securities, runs the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, files for bankruptcy, or otherwise experiences a business interruption, the Fund could suffer losses, including monetary losses, miss investment opportunities or be forced to hold investments it would prefer to sell. Counterparty risk is heightened during unusually adverse market conditions.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject an Underlying ETF Fund to counterparty risk.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.

- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if an Underlying ETF Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, an Underlying ETF Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Non-diversification risk The Fund is non-diversified, as defined by the 1940 Act, and as such may invest in the securities of a
 limited number of issuers and may invest a greater percentage of its assets in a particular issuer. Therefore, a decline in the
 market price of a particular security held by the Fund may affect the Fund's performance more than if the Fund were a diversified
 investment company.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

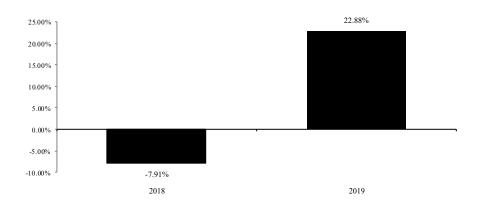

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Aggressive Index with the Morningstar Moderately Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 80% MSCI All Country World Index (Net), 20% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/WCM Focused International Equity Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek long-term capital appreciation by investing primarily in companies located outside of the United States.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.67%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	1.13%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/WCM Focused International Equity Fund Class A			
1 year	3 years	5 years	10 years
\$115	\$359	\$622	\$1,375

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	24%

Principal Investment Strategies. The Fund seeks to achieve its investment objective by investing, under normal circumstances, at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in equity securities.

The Fund's investments in equity securities may include common stocks, preferred stocks and warrants. The Fund invests primarily in equity securities or depositary receipts of non-U.S. domiciled companies located in developed countries, but may also invest in emerging markets and less developed countries.

The Fund's investments in depositary receipts may include American Depositary Receipts ("ADRs"). ADRs are receipts that represent interests in foreign securities held on deposit by U.S. banks.

WCM Investment Management, LLC, the Fund's sub-adviser (the "Sub-Adviser"), uses a bottom-up approach that seeks to identify companies with attractive fundamentals, such as long-term growth in revenue and earnings, and that show a high probability for superior future growth. The Sub-Adviser's investment process focuses on seeking industry leading companies that the Sub-Adviser believes possess growing competitive advantages; corporate cultures emphasizing strong, quality and experienced management; low or no debt; and attractive relative valuations. The Sub-Adviser also considers other factors in selecting securities, including political risk, monetary policy risk, and regulatory risk.

Although the Fund may invest in companies in any capitalization range, it will generally invest in large, established multinational companies. The Fund generally will invest in securities of companies located in different regions and in at least three different countries. From time to time, the Fund may have a significant portion of its assets invested in the securities of companies in one or a few countries or regions.

The Sub-Adviser will generally reduce position size in the portfolio based on individual holding size, industry/sector weight, as well as other relevant factors. When performing a fundamental analysis, the Sub-Adviser views valuation as the most significant factor in managing position size. The key factors that the Sub-Adviser considers when determining whether to sell out of a position completely are its evaluation(s) of whether a company's competitive advantage is deteriorating or no longer expanding; there are more attractive names in an essentially similar industry; a company's leadership is not performing as expected; a company's culture is challenged; it deems valuation to be excessive; and/or there is material geopolitical or currency risk.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign

withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Depositary receipts risk Depositary receipts, such as American depositary receipts ("ADRs"), global depositary receipts ("GDRs"), and European depositary receipts ("EDRs"), may be issued in sponsored or un-sponsored programs. In a sponsored program, a security issuer has made arrangements to have its securities traded in the form of depositary receipts. In an unsponsored program, the issuer may not be directly involved in the creation of the program. Depositary receipts involve many of the same risks as direct investments in foreign securities. These risks include: fluctuations in currency exchange rates, which are affected by international balances of payments and other economic and financial conditions; government intervention; and speculation. With respect to certain foreign countries, there is the possibility of expropriation or nationalization of assets, confiscatory taxation, political and social upheaval, and economic instability. Investments in depositary receipts that are traded over the counter may also subject a Fund to liquidity risk.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Issuer risk The value of an individual security or particular type of security can be more volatile than the market as a whole and can perform differently from the market as a whole. A security's value may decline for reasons that directly relate to the issuer, such as management performance, corporate governance, financial leverage and reduced demand for the issuer's goods or services.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Fund's Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.

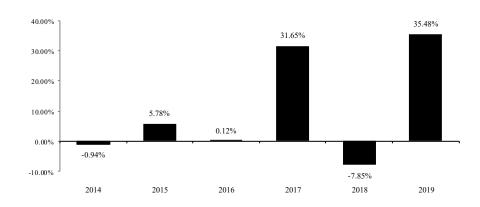

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

The performance data includes the performance of the JNL/WCM Focused International Equity Fund, then a series of the Jackson Variable Series Trust, for periods before the Fund's registration statement became effective.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Westchester Capital Event Driven Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek to provide attractive risk-adjusted returns with low relative volatility in virtually all market environments. Risk-adjusted return is a concept that considers not only an investment's return, but also the amount of potential risk involved in producing that return.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	1.05%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ^{1,2,3}	0.49%	
Acquired Fund Fees and Expenses ⁴	0.22%	
Total Annual Fund Operating Expenses	2.06%	

- ¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ² "Other Expenses" are based on amounts incurred during the period ended December 31, 2019. The amount includes the costs associated with the Fund's short sales on equity securities. When a cash dividend is declared on a security for which the Fund holds a short position, the Fund incurs the obligation to pay an amount equal to that dividend to the lender of the shorted security. In addition, the Fund incurs borrowing fees related to short sale transactions. The annualized ratios of dividend expense on short sales and borrowing fees related to short sales to assets for the period were 0.36%. The Fund's actual dividend expense and borrowing fees on securities sold short in future periods may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's short positions, the actual dividends paid with respect to the securities the Fund sells short, and the actual timing of the Fund's short sale transactions, each of which is expected to vary over time. The annualized ratios of dividend expense on short sales and borrowing fees related to short sales have been restated to reflect current fees.
- ³ "Other Expenses" are based on amounts incurred during the period ended December 31, 2019. The amount includes financing costs associated with

secured borrowings. The annualized ratios of financing costs related to secured borrowings were 0.01%. The Fund's actual financing costs may be significantly higher or lower than the amounts above due to, among other factors, the extent of the Fund's involvement with secured borrowings and the costs associated with those transactions, each of which is expected to vary over time.

⁴ Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Westchester Capital Event Driven Fund Class A			
1 year	3 years	5 years	10 years
\$209	\$646	\$1,108	\$2,390

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	286%

Principal Investment Strategies. The Fund primarily employs investment strategies designed to capture price movements generated by specific events, including, but not limited to, securities of companies involved in mergers, acquisitions, asset sales or other divestitures, restructurings, refinancings, recapitalizations, reorganizations or other special situations (referred to as "event-driven opportunities"). Among the investment strategies the sub-adviser, Westchester Capital Management, LLC ("Sub-Adviser") may use on behalf of the Fund are the following:

Merger-Arbitrage Strategy: The Fund may purchase the securities of companies that are involved in publicly announced mergers, takeovers and other corporate reorganizations, and use one or more arbitrage strategies in connection with the purchase. Although a variety of strategies may be employed depending upon the nature of the reorganizations, the most common merger-arbitrage strategy involves purchasing the shares of an announced acquisition target at a discount to their expected value upon completion of the acquisition. The size of this discount, known as the arbitrage "spread," generally determines the Fund's potential profit on any given investment. In conjunction with investment in a target company, the Fund may employ a variety of hedging strategies to protect against issuer-related risk, including selling short the securities of the company that proposes to acquire the target company and/or the purchase and sale of put and call options.

Special Situations Strategy: The Fund may invest in the securities of issuers based upon the expectation of the Sub-Adviser that the price of such securities may change in the short term due to a special situation, such as a stock buy-back, spinoffs and split-offs, credit rating upgrade, the outcome of litigation or other dispute, a positive earnings report, legislative or regulatory changes or other catalyst-driven event.

Capital Structure Arbitrage: Capital structure arbitrage is an investment strategy that seeks to profit from relative pricing discrepancies between related securities, such as securities of different classes issued by the same issuer. For example, when the Sub-Adviser believes that unsecured debt securities are overvalued in relation to senior secured debt securities of the same issuer, the Fund may purchase the senior secured debt securities of the issuer and take a short position in the unsecured debt securities of the same issuer.

Convertible Arbitrage: Convertible arbitrage is a strategy that seeks to profit from mispricings between a firm's convertible securities and the underlying equity securities. A common convertible arbitrage approach matches a long position in a convertible security with a short position in the underlying common stock when an investor believes the convertible security is undervalued relative to the value of the underlying equity security. In such a case, the investor may seek to sell short shares of the underlying common stock in order to hedge exposure to the issuer of the equity securities. Convertible arbitrage positions may be designed to earn income from coupon or dividend payments on the investment in the convertible securities.

Distressed/Restructuring: The Fund may invest in securities, including debt securities, of financially distressed companies and companies undergoing or expected to undergo bankruptcy or other insolvency proceeding. The Fund may invest in corporate bonds, privately held loans and other securities or obligations of companies that are highly leveraged, are experiencing financial difficulties or have filed for bankruptcy. The Fund may profit from its investments in such issuers if

the issuer undergoes a successful restructuring or recapitalization, undertakes asset sales or participates in spin-off transactions. The Fund may also purchase securities in anticipation of a company's recovery or turnaround or the liquidation of all or some of the company's assets.

Option Income Strategies: The Fund may sell, or "write," call options on its portfolio securities. The Fund may also write call options on one or more basket of stocks, such as the S&P 500 Index or an industry sub-group of the S&P 500 Index. The options written by the Fund are considered "covered" if the Fund owns the stocks or basket of stocks against which the options are written. The Sub-Adviser may determine to purchase shares and sell call options on those shares at approximately the same time, although the sale of options on the Fund's portfolio securities may occur at any time or not at all. The Sub-Adviser may utilize the option writing strategy at any time, including in a relatively flat or declining market environment, to earn premium income. The Fund may sell call options on substantially all of its portfolio securities.

The Fund may utilize other options strategies, such as writing options on securities it does not currently own (known as "uncovered" options), buying or selling options when the Sub-Adviser believes they may be mispriced or may provide attractive opportunities to earn income, or engaging in risk-reversal transactions. In a risk-reversal transaction, the Sub-Adviser may buy put options and sell call options against a long stock position.

In implementing the Fund's investment strategies, the Fund may invest in a wide variety of investments, such as equity securities of any kind, debt securities of any kind, including those that pay a fixed or floating rate of interest, warrants, convertible securities, master limited partnerships, derivative instruments of any kind, including options, futures, currency forwards and swaps.

The Fund may purchase fixed- and floating-rate income investments of any credit quality or maturity, including corporate bonds, bank debt and preferred securities. Certain of the debt securities in which the Fund invests may carry non-investment-grade ratings (rated BB+ or lower by S&P Global Ratings, or comparably rated by another nationally recognized statistical rating organization), or may be unrated investments of comparable quality, commonly referred to as "high-yield" or "junk" bonds.

The Fund may enter into derivative transactions and other instruments of any kind for hedging purposes, duration or volatility management purposes, or otherwise to gain, or reduce, long or short exposure to one or more asset classes or issuers. For example, the Fund may write call options on its portfolio securities or a market index that is representative of its portfolio with the expectation of generating additional income. The Sub-Adviser may seek to hedge the Fund's portfolio against a decline in the value of its portfolio securities or a decline in the market generally by purchasing put options.

The Fund also may use derivative transactions with the purpose or effect of creating investment leverage.

The Fund may invest in derivative instruments in any manner consistent with its investment strategies.

The Fund may invest in other investment companies, including exchange-traded funds ("ETFs"). Those investments may be made for the purpose of, among other things, gaining or hedging market exposure, hedging exposure to a particular industry, sector or component of an event-driven opportunity, or managing the Fund's cash position. The Fund may hold a significant portion of its assets in cash, money market investments, money market funds or other similar short-term investments for defensive purposes or to preserve the Fund's ability to capitalize quickly on new market opportunities. During periods when the Fund is so invested, its investment returns may be lower than if it were not so invested and the Fund may not achieve its investment objective. The Fund may also invest in special purpose acquisition companies, a form of investment vehicle typically formed for the purpose of acquiring an operating business.

In making investments for the Fund, the Sub-Adviser is guided by the following general considerations:

- before an initial position in an event-driven opportunity is established, a preliminary analysis is made of the expected event to determine the probability and timing of the event;
- in deciding whether or to what extent to invest, the Sub-Adviser evaluates, among other things, the credibility, strategic motivation and financial resources of the relevant participants, and the liquidity of the securities involved in the transaction; and
- the risk-reward characteristics of each event-driven opportunity are assessed on an ongoing basis.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

• Event driven and special situations risk – At times, the Fund may seek to benefit from what are considered "special situations," such as mergers, acquisitions, consolidations, liquidations, spin-offs, tender or exchange offers, reorganizations, restructurings or other unusual events that are expected to affect a particular issuer. Such special situations may involve so-called "distressed companies," the debt obligations of which typically are unrated, lower-rated, in default or close to default. Also, securities of

- distressed companies are generally more likely to become worthless. There is a risk that the expected change or event might not occur, which could cause the price of the security to fall, perhaps sharply.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Distressed securities risk Distressed securities risk refers to the uncertainty of repayment of defaulted securities and obligations of distressed issuers. Because the issuer of such securities is likely to be in a distressed financial condition, repayment of distressed or defaulted securities (including insolvent issuers or issuers in payment or covenant default, in workout or restructuring or in bankruptcy or insolvency proceedings) is subject to significant uncertainties. Insolvency laws and practices in foreign jurisdictions are different than those in the U.S. and the effect of these laws and practices may be less favorable and predictable than in the U.S. Investments in defaulted securities and obligations of distressed issuers are considered highly speculative.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- *Portfolio turnover risk* Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Leverage risk Certain transactions, such as reverse repurchase agreements, futures, forwards, swaps, or other derivative instruments, include the use of leverage and may cause the Fund to liquidate portfolio positions at disadvantageous times to satisfy its obligations or to meet asset segregation requirements. The effect of using leverage is to amplify the Fund's gains and losses in comparison to the amount of the Fund's assets (that is, assets other than borrowed assets) at risk, which may cause the Fund's portfolio to be more volatile. If the Fund uses leverage, the Fund has the risk of capital losses that exceed the net assets of the Fund.
- Options risk If the Fund buys an option, it buys a legal contract giving it the right to buy or sell a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium paid by the Fund. If the Fund sells an option, it sells to another person the right to buy from or sell to the Fund a specific amount of the underlying instrument or futures contract on the underlying instrument at an agreed upon price typically in exchange for a premium received by the Fund. Options may be illiquid and the Fund may have difficulty closing out its position. The prices of options can be highly volatile and the use of options can lower total returns.

- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Speculative exposure risk If a Fund invests in a derivative instrument (or engages in a similarly speculative practice) not for the purpose of hedging, the Fund is directly exposed to the risks associated with an investment in that derivative. Gains or losses from speculative positions in a derivative may be much greater than the derivative's original cost and, in certain instances, potential losses may be unlimited.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Master limited partnership risk An investment in MLP units involves some risks that differ from an investment in the common stock of a corporation. Holders of MLP units have limited control on matters affecting the partnership. Investing in MLPs involves certain risks related to investing in the underlying assets of the MLPs and risks associated with pooled investment vehicles. MLPs holding credit-related investments are subject to interest rate risk and the risk of default on payment obligations by debt issuers. MLPs that concentrate in a particular industry or a particular geographic region are subject to risks associated with such industry or region. The benefit derived from the Fund's investment in MLPs is largely dependent on the MLPs being treated as partnerships for federal income tax purposes. Certain MLPs may be illiquid securities.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Short sales risk A short sale may be effected by selling a security that the Fund does not own. If the price of the security sold short increases, the Fund would incur a loss; conversely, if the price declines, the Fund will realize a gain. The Fund may take a short position in securities or in a derivative instrument, such as a future, forward or swap. Short sales involve greater reliance on the investment manager's ability to accurately anticipate the future value of an instrument, potentially higher transaction and other costs (that will reduce potential Fund gains and increase potential Fund losses), and imperfect correlation between the actual and desired level of exposure. Because the Fund's potential loss on a short position arises from increases in the value of the asset sold short, the extent of such loss, like the price of the asset sold short, is theoretically unlimited. By investing the proceeds received from selling securities short, the Fund could be deemed to be employing a form of leverage, which creates special risks. The Fund's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Fund's overall potential for loss to a greater extent than would occur without the use of leverage. Short positions typically involve increased liquidity risk and transaction costs, and the risk that the third party to the short sale may fail to honor its contract terms.
- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- *Small-capitalization investing risk* Investing in smaller companies, some of which may be newer companies or start-ups, generally involves greater risks than investing in larger, more established ones. The securities of companies with smaller market

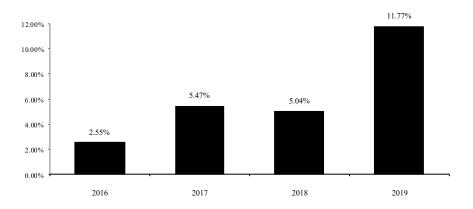

- capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Hedging instruments risk The Fund may attempt, from time to time, to hedge (protect) against currency risks, largely using forward foreign currency exchange contracts, where available and when, in the Sub-Adviser's opinion, it would be advantageous to the Fund. A forward foreign currency exchange contract is an agreement to buy or sell a specific currency at a future date and at a price set at the time of the contract. Forward foreign currency exchange contracts may reduce the risk of loss from a change in value of a currency, but they also limit any potential gains and do not protect against fluctuations in the value of the underlying position. For example, during periods when the U.S. dollar weakens in relation to a foreign currency, the Fund's use of a currency hedging program will result in lower returns than if no currency hedging programs were in effect. Forward foreign currency exchange contracts and put options are considered derivative investments, because their value and performance depend, at least in part, on the value and performance of an underlying asset. The Fund may also use futures, swaps, and other derivative instruments to hedge risk. The Fund's investment in derivatives may involve a small investment relative to the amount of risk assumed. To the extent the Fund enters into these transactions, its success will depend on the Sub-Adviser's ability to predict market movements, and their use may have the opposite effect of that intended. Risks include potential loss due to the imposition of controls by a government on the exchange of foreign currencies, the loss of any premium paid to enter into the transaction, delivery failure, default by any other party, or inability to close out a position because the trading market becomes illiquid. In addition, for certain reasons, the Fund may not seek to establish a perfect correlation between such hedging instruments and the portfolio instruments being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. It is not possible to hedge fully or perfectly against any risk.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Call risk Call risk is the risk that, during a period of falling interest rates, the issuer may redeem a security by repaying it early, which may reduce the Fund's income if the proceeds are reinvested at lower interest rates.
- Convertible securities risk Convertible securities have investment characteristics of both equity and debt securities. Investments in convertible securities may be subject to market risk, credit and counterparty risk, interest rate risk and other risks associated with investments in equity and debt securities, depending on the price of the underlying security and conversion price. While equity securities may offer the potential for greater long-term growth than most debt securities, they generally have higher volatility. The value of convertible and debt securities may fall when interest rates rise. Securities with longer durations tend to be more sensitive to changes in interest rates, generally making them more volatile than securities with shorter durations. Due to their hybrid nature, convertible securities are typically more sensitive to changes in interest rates than the underlying common stock, but less sensitive than a fixed rate corporate bond.
- Privately placed securities risk The Fund's investments may also include privately-placed securities, which are subject to resale restrictions. Investments in these securities usually will decrease a Fund's liquidity level to the extent the Fund may be unable to sell or transfer these securities due to restrictions on transfers or on the ability to find buyers interested in purchasing the securities. The illiquid nature of the market for privately placed securities, as well as the lack of publicly available information regarding these securities, may also adversely affect the Fund's ability to fair value such securities at certain times and could make it difficult for the Fund to sell them. The Fund could lose money on such investments.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/WMC Balanced Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is reasonable income and long-term capital growth.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.32%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.10%	
Acquired Fund Fees and Expenses ²	0.01%	
Total Annual Fund Operating Expenses	0.73%	

¹ "Other Expenses" include an Administrative Fee of 0.09% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL/WMC Balanced Fund Class A			
1 year	3 years	5 years	10 years
\$75	\$233	\$406	\$906

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	42%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing primarily in a diversified portfolio of common stocks and investment grade fixed-income securities. The Fund may invest in any type or class of security. The anticipated mix of the Fund's holdings is typically 60-70% of its assets in equities and 30-40% in fixed-income securities, including, investment-grade corporate bonds, U.S. Treasury and government agency bonds, mortgage-backed securities, asset-backed securities, and commercial-backed securities. Cash and cash equivalents are included in the fixed income fund weighting.

The Fund may invest in derivatives to reduce fixed-income exposure to facilitate meeting the Fund's objective.

The Fund may invest up to 25% of its assets in foreign equity and foreign fixed-income securities.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. The Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security

before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.

- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Investment strategy risk The investment manager uses the principal investment strategies and other investment strategies to seek to achieve the Fund's investment objective. Investment decisions made by the investment manager in accordance with these investment strategies may not produce the returns the investment manager expected, and may cause the Fund's shares to decline in value or may cause the Fund to underperform other funds with similar investment objectives.
- Liquidity risk Investments in securities that are difficult to purchase or sell (illiquid or thinly-traded securities) may reduce returns if the Fund is unable to sell the securities at an advantageous time or price or achieve its desired level of exposure to a certain sector. Liquidity risk arises, for example, from small average trading volumes, trading restrictions, or temporary suspensions of trading. To meet redemption requests, the Fund may be forced to sell securities at an unfavorable time and/or under unfavorable conditions.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Mortgage-related and other asset-backed securities risk Rising interest rates tend to extend the duration of mortgage-related and other asset-backed securities, making them more sensitive to changes in interest rates and exhibit increased volatility. When interest rates decline, borrowers may pay off their mortgages or other loans sooner than expected, which can reduce the returns.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

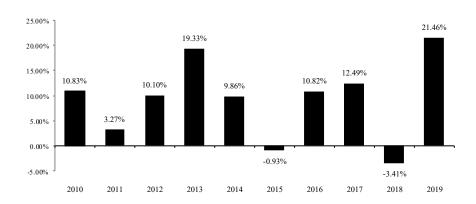

changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the 65% S&P 500 Index, 35% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/WMC Government Money Market Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to achieve as high a level of current income as is consistent with the preservation of capital and maintenance of liquidity.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.16%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.11%	
Total Annual Fund Operating Expenses ^{2,3}	0.57%	

- ¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ² Expense information has been restated to reflect current fees.
- ³ JNAM has contractually agreed to waive fees and/or reimburse expenses of the Fund to the extent necessary to limit the total operating expenses of each class of shares of the Fund, transactional costs, if any, interest, taxes and dividend and extraordinary expenses, to an annual rate (as a percentage of the average daily net assets of the Fund) equal to or less than the Fund's investment income for the period. The fee waiver will continue through April 30, 2021. The Adviser may extend the fee waiver for a subsequent one-year term, and thereafter, the fee waiver will automatically renew for additional subsequent one-year terms unless the Board of Trustees approves the elimination of the fee waiver. In addition, when the Fund receives income sufficient to pay a dividend, the Adviser may recapture previously waived fees and expenses for a period of three years.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. The example also assumes that the contractual expense limitation agreement is in effect through April 30, 2021. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/WMC Government Money Market Fund Class A			
1 year	3 years	5 years	10 years
\$58	\$183	\$318	\$714

Principal Investment Strategies. Under normal circumstances, the Fund seeks to achieve its investment objective by investing at least 99.5% of its total assets in cash, U.S. Government securities, and/or repurchase agreements that are "collateralized fully" (i.e., collateralized by cash or government securities). The government securities typically have a maximum remaining maturity of 397 calendar days and the repurchase agreements are collateralized by cash or government securities with a maximum remaining maturity of 397 days. Under normal circumstances, the Fund will invest at least 80% of its assets (net assets plus the amount of any borrowings made for investment purposes) in government securities or repurchase agreements collateralized by government securities. As a government money market fund, the Fund is exempt from requirements that permit money market funds to impose a liquidity fee and/or temporary redemption gate. While the Fund's Board of Trustees may elect to subject the Fund to liquidity fee and gate requirements in the future, the Board of Trustees has not elected to do so at this time.

The Fund seeks to maintain a stable net asset value of \$1.00 per share, neither the Federal Deposit Insurance Company, nor any other government agency insures or protects your investment.

Principal Risks of Investing in the Fund. You could lose money by investing in the Fund. Although the Fund seeks to preserve the value of your investment at \$1.00 per share, it cannot guarantee it will do so. An investment in the Fund is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The Fund's sponsor has no legal obligation to provide financial support to the Fund, and you should not expect that the sponsor will provide financial support to the Fund at any time.

As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. While the Fund may hold securities that carry U.S. Government guarantees, these guarantees do not extend to shares of the Fund itself. The principal risks associated with investing in the Fund include:

- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- *Income risk* The Fund is subject to the risk that the income generated from the Fund's investments may decline in the event of falling interest rates. Income risk may be high if the Fund's income is predominantly based on short-term interest rates, which can fluctuate significantly over short periods. The Fund's distributions to shareholders may decline when interest rates fall.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- *Managed portfolio risk* As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market

- changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Repurchase agreements, purchase and sale contracts risk If the other party to a repurchase agreement or purchase and sale contract defaults on its obligation under the agreement, the Fund may suffer delays and incur costs or lose money in exercising its rights under the agreement. If the seller fails to repurchase the security under a repurchase agreement or purchase and sale contract, and the market value of the security declines, the Fund may lose money.
- U.S. Government securities risk Obligations issued by agencies and instrumentalities of the U.S. Government vary in the level of support they receive from the U.S. Government. They may be: (i) supported by the full faith and credit of the U.S. Treasury; (ii) supported by the right of the issuer to borrow from the U.S. Treasury; (iii) supported by the discretionary authority of the U.S. Government to purchase the issuer's obligations; or (iv) supported only by the credit of the issuer. The maximum potential liability of the issuers of some U.S. Government securities may greatly exceed their current resources, or their legal right to receive support from the U.S. Treasury.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

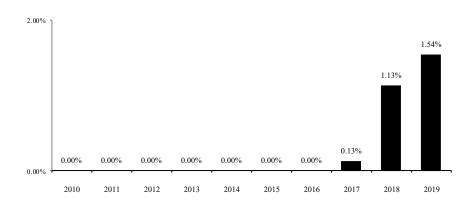

Prior to September 19, 2016, the Fund was operated as a prime money market fund.

Effective September 19, 2016, the Fund operates as a government money market fund and, as such, invests at least 99.5% of its total assets in cash, government securities and/or repurchase agreements that are "collateralized fully" (i.e., backed by cash or government securities).

The 7-day yield of Class A on December 31, 2019, was 1.10%.

Portfolio Management.

Investment Adviser to the Fund:

Jackson National Asset Management, LLC ("JNAM")

Sub-Adviser:

Wellington Management Company LLP ("Wellington Management")

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs Competitive Advantage Fund

(formerly, JNL/S&P Competitive Advantage Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- *Mailing in the postage-paid card on the cover of this report;*
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.26%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.10%	
Total Annual Fund Operating Expenses	0.66%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	JNL/Goldman Sachs Competitive Advantage Fund Class A			
Ī	1 year	3 years	5 years	10 years
Ī	\$67	\$211	\$368	\$822

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	43%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in the stock of anywhere from 30 to 90 distinct companies (generally ranging from 35 to 50 distinct companies) included in the S&P 500® Index that are believed to have superior profitability, as measured by return on invested capital, and trade at relatively attractive valuations. Goldman Sachs Asset Management, L.P. ("GSAM") excludes stocks it views as lower quality using the S&P Quality Rankings. GSAM will choose only one share class of a company to be represented in the Fund if the stock selection model selects multiple share classes of the same company.

The Fund is comprised of three distinct sub-portfolios, each of which selects 30 company names and rebalances on a separate date. The 30 names included in a sub-portfolio could overlap with some or all of the names in any of the other sub-portfolios. The sub-portfolios separately are selected and rebalance on or about the first business day of March, September or December of each year. Additionally, on or about the first business day of December of each year, the Fund rebalances the size of the three separate sub-portfolios to ensure equal weighting of the sub-portfolios. GSAM and Mellon Investments Corporation (collectively, "Sub-Advisers") generally use a buy and hold strategy, executing trades only on or around each stock selection date, when cash flow activity occurs in the Fund and for dividend reinvestment purposes.

S&P Quality Rankings

Growth and stability of earnings and dividends are deemed key elements in establishing earnings and dividend rankings for common stocks. This process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by an internal analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	В-	Lower
A	High	C	Lowest
A-	Above Average	D	In Reorganization
B+	Average	NR	Not Ranked
В	Below Average		

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act"), and other U.S. "Federal Securities Laws" may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. The 1940 Act and other Federal Securities Laws may also limit or prohibit the Funds from making certain investments.

The Fund may invest in a combination of exchange-traded funds ("ETFs") to assist with fund rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Limited management, trading cost and rebalance risk Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Regulatory investment limits risk The U.S. "Federal Securities Laws" may limit the amount a Fund may invest in certain securities. These limits may be Fund specific or they may apply to the investment manager. As a result of these regulatory

limitations under the Federal Securities Laws, and the asset management and financial industry business activities of the investment manager and its affiliates, the investment manager and the Funds may be prohibited from or limited in effecting transactions in certain securities. The investment manager and the Fund may encounter trading limitations or restrictions because of aggregation issues or other regulatory requirements. The Federal Securities Laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These regulatory investment limits may increase the Fund's expenses and may limit the Fund's performance.

- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

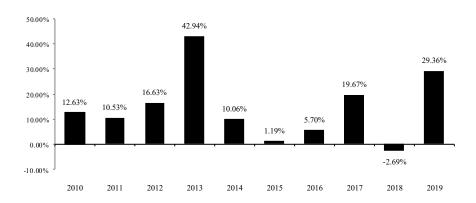

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Equal Weight Index as the Fund's secondary benchmark.

Annual Total Returns as of December 31

Class A

Best Quarter (ended 3/31/2019): 16.20%; Worst Quarter (ended 12/31/2018): -14.38%

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs Dividend Income & Growth Fund

(formerly, JNL/S&P Dividend Income & Growth Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is primarily capital appreciation with a secondary focus on current income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses		
(Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.25%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.10%	
Total Annual Fund Operating Expenses	0.65%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs Dividend Income & Growth Fund Class A			
1 year	3 years	5 years	10 years
\$66	\$208	\$362	\$810

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	41%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in the stock of anywhere from 33 to 99 distinct companies (generally ranging from 35 to 50 distinct companies) included in the S&P 500[®] Index that have attractive dividend yields and strong capital structures as determined by Goldman Sachs Asset Management, L.P. ("GSAM"). The holdings in the portfolio are selected from all 11 sectors of the economy identified in the S&P 500 Index. GSAM will choose only one share class of a company to be represented in the Fund if the stock selection model selects multiple share classes of the same company.

GSAM incorporates S&P Quality Rankings and S&P Global Ratings Issuer Credit Ratings in the selection process.

The Fund is comprised of three distinct sub-portfolios, each of which selects 33 company names and rebalances on a separate date. The 33 names included in a sub-portfolio could overlap with some or all of the names in any of the other sub-portfolios. The sub-portfolios separately are selected and rebalance on or about the first business day of March, September or December of each year. Additionally, on or about the first business day of December of each year, the Fund rebalances the size of the three separate sub-portfolios to ensure equal weighting of the sub-portfolios. GSAM and Mellon Investments Corporation (collectively, "Sub-Advisers") generally use a buy and hold strategy, executing trades only on or around each stock selection date, when cash flow activity occurs in the Fund and for dividend reinvestment purposes.

S&P Quality Rankings

Growth and stability of earnings and dividends are deemed key elements in establishing earnings and dividend rankings for common stocks. This process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by an internal analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B-	Lower
A	High	C	Lowest
A-	Above Average	D	In Reorganization
B+	Average	NR	Not Ranked
В	Below Average		

S&P Global Ratings Issuer Credit Ratings

S&P Global Ratings Issuer Credit Ratings (also known as credit ratings) express opinions about the ability and willingness of an issuer to meet its financial obligations in full and on time. Credit ratings can also be used to determine the credit quality of an individual debt issue, such a corporate or municipal bond, and the relative likelihood that the issue may default. Credit ratings are not an absolute measure of default probability, since there are future events that cannot be foreseen. Credit ratings are not intended as guarantees of credit quality or as exact measures of the probability that a particular issuer or debt issue will default.

S&P Global Ratings Issuer Credit Ratings opinions are based on analysis by experienced professionals who evaluate and interpret information received from issuers and other available sources to form a considered opinion. S&P Global Ratings analysts obtain information from public reports, as well as from interviews and discussions with the issuer's management. They use that information and apply their analytical judgment to assess the entity's financial condition, operation performance, policies and risk management strategies.

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act"), and other U.S. "Federal Securities Laws" may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. The 1940 Act and other Federal Securities Laws may also limit or prohibit the Funds from making certain investments.

The Fund may lend its securities to increase its income.

The Fund may invest in a combination of exchange-traded funds ("ETFs") to assist with fund rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.

- Limited management, trading cost and rebalance risk Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Regulatory investment limits risk The U.S. "Federal Securities Laws" may limit the amount a Fund may invest in certain securities. These limits may be Fund specific or they may apply to the investment manager. As a result of these regulatory limitations under the Federal Securities Laws, and the asset management and financial industry business activities of the investment manager and its affiliates, the investment manager and the Funds may be prohibited from or limited in effecting transactions in certain securities. The investment manager and the Fund may encounter trading limitations or restrictions because of aggregation issues or other regulatory requirements. The Federal Securities Laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These regulatory investment limits may increase the Fund's expenses and may limit the Fund's performance.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

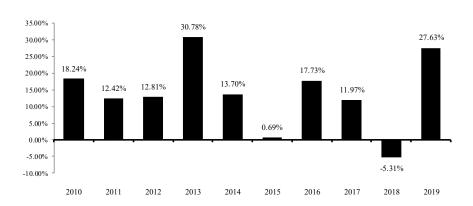

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Value Index as the Fund's secondary benchmark.

Annual Total Returns as of December 31

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a

fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs Intrinsic Value Fund

(formerly, JNL/S&P Intrinsic Value Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.26%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.10%	
Total Annual Fund Operating Expenses	0.66%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	JNL/Goldman Sachs Intrinsic Value Fund Class A				
ſ	1 year	3 years	5 years	10 years	
ľ	\$67	\$211	\$368	\$822	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	59%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in the stock of anywhere from 30 to 90 distinct companies (generally ranging from 45 to 60 distinct companies) included in the S&P 500[®] Index that generate strong free cash flows and sell at relatively attractive valuations. Goldman Sachs Asset Management, L.P. ("GSAM") will choose only one share class of a company to be represented in the Fund if the stock selection model selects multiple share classes of the same company.

GSAM excludes companies in the Financials sector from the selection. GSAM incorporates S&P Quality Rankings and S&P Global Ratings Issuer Credit Ratings in the selection process.

The Fund is comprised of three distinct sub-portfolios, each of which selects 30 company names and rebalances on a separate date. The 30 names included in a sub-portfolio could overlap with some or all of the names in any of the other sub-portfolios. The sub-portfolios separately are selected and rebalance on or about the first business day of March, September or December of each year. Additionally, on or about the first business day of December of each year, the Fund rebalances the size of the three separate sub-portfolios to ensure equal weighting of the sub-portfolios. GSAM and Mellon Investments Corporation (collectively, "Sub-Advisers") generally use a buy and hold strategy, executing trades only on or around each stock selection date, when cash flow activity occurs in the Fund and for dividend reinvestment purposes.

S&P Quality Rankings

Growth and stability of earnings and dividends are deemed key elements in establishing earnings and dividend rankings for common stocks. This process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by an internal analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	B-	Lower
A	High	C	Lowest
A-	Above Average	D	In Reorganization
B+	Average	NR	Not Ranked
В	Below Average		

S&P Global Ratings Issuer Credit Ratings

S&P Global Ratings Issuer Credit Ratings (also known as credit ratings) express opinions about the ability and willingness of an issuer to meet its financial obligations in full and on time. Credit ratings can also be used to determine the credit quality of an individual debt issue, such a corporate or municipal bond, and the relative likelihood that the issue may default. Credit ratings are not an absolute measure of default probability, since there are future events that cannot be foreseen. Credit ratings are not intended as guarantees of credit quality or as exact measures of the probability that a particular issuer or debt issue will default.

S&P Global Ratings Issuer Credit Ratings opinions are based on analysis by experienced professionals who evaluate and interpret information received from issuers and other available sources to form a considered opinion. S&P Global Ratings Standard & Poor's Ratings Services analysts obtain information from public reports, as well as from interviews and discussions with the issuer's management. They use that information and apply their analytical judgement to assess the entity's financial condition, operation performance, policies and risk management strategies.

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act"), and other U.S. "Federal Securities Laws" may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. The 1940 Act and other Federal Securities Laws may also limit or prohibit the Funds from making certain investments.

The Fund may invest in a combination of exchange-traded funds ("ETFs') to assist with fund rebalances and to meet redemption and purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.

- Limited management, trading cost and rebalance risk Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- Managed portfolio risk As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- *Portfolio turnover risk* Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Regulatory investment limits risk The U.S. "Federal Securities Laws" may limit the amount a Fund may invest in certain securities. These limits may be Fund specific or they may apply to the investment manager. As a result of these regulatory limitations under the Federal Securities Laws, and the asset management and financial industry business activities of the investment manager and its affiliates, the investment manager and the Funds may be prohibited from or limited in effecting transactions in certain securities. The investment manager and the Fund may encounter trading limitations or restrictions because of aggregation issues or other regulatory requirements. The Federal Securities Laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These regulatory investment limits may increase the Fund's expenses and may limit the Fund's performance.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1,

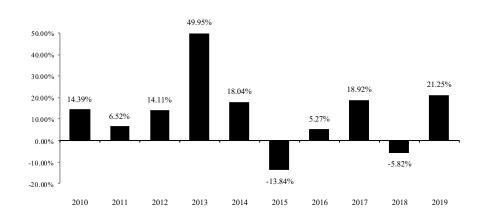

2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Value Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those

insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

Summary Prospectus – April 27, 2020

JNL/Goldman Sachs Total Yield Fund

(formerly, JNL/S&P Total Yield Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.26%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.11%	
Total Annual Fund Operating Expenses	0.67%	

¹ "Other Expenses" include an Administrative Fee of 0.10% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

	JNL/Goldman Sachs Total Yield Fund Class A				
	1 year	3 years	5 years	10 years	
Γ	\$68	\$214	\$373	\$835	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	83%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in the stock of anywhere from 30 to 90 distinct companies (generally ranging from 40 to 65 distinct companies) included in the S&P 500[®] Index that generate positive cash flow and have a strong track record, as determined by Goldman Sachs Asset Management, L.P. ("GSAM") of returning cash to investors, such as through dividends, share repurchases or debt retirement.

GSAM excludes companies in the Banks and Utilities subsectors. GSAM incorporates positive profits measures and S&P Quality Rankings in its selection process. GSAM will choose only one share class of a company to be represented in the Fund if the stock selection model selects multiple share classes of the same company.

The Fund is comprised of three distinct sub-portfolios, each of which selects 30 company names and rebalances on a separate date. The 30 names included in a sub-portfolio could overlap with some or all of the names in any of the other sub-portfolios. The sub-portfolios separately are selected and rebalance on or about the first business day of March, September or December of each year. Additionally, on or about the first business day of December of each year, the Fund rebalances the size of the three separate sub-portfolios to ensure equal weighting of the sub-portfolios. GSAM and Mellon Investments Corporation (collectively, "Sub-Advisers") generally use a buy and hold strategy, executing trades only on or around each stock selection date, when cash flow activity occurs in the Fund and for dividend reinvestment purposes.

S&P Quality Rankings

Growth and stability of earnings and dividends are deemed key elements in establishing earnings and dividend rankings for common stocks. This process also takes into consideration certain adjustments and modifications deemed desirable in establishing such rankings. The final score for each stock is measured against a scoring matrix determined by an internal analysis of the scores of a large and representative sample of stocks. The range of scores in the array of this sample has been aligned with the following ladder of rankings:

A+	Highest	В-	Lower
A	High	C	Lowest
A-	Above Average	D	In Reorganization
B+	Average	NR	Not Ranked
В	Below Average		

Certain provisions of the Investment Company Act of 1940, as amended ("1940 Act"), and other U.S. "Federal Securities Laws" may limit the ability of the Fund to invest in certain securities in excess of certain percentage limitations. The 1940 Act and other Federal Securities Laws may also limit or prohibit the Funds from making certain investments.

The Fund may lend its securities to increase its income.

The Fund may invest in a combination of exchange-traded funds ("ETFs") to assist with fund rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the Fund's objective.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Model risk* The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Concentration risk The Fund may concentrate its investments in certain securities. To the extent that the Fund focuses on particular countries, regions, industries, sectors, issuers, types of investment or limited number of securities from time to time, the Fund may be subject to greater risks of adverse economic, business or political developments in the area of focus than a fund that invests in a wider variety of countries, regions, industries, sectors or investments.
- Sector risk Companies with similar characteristics may be grouped together in broad categories called sectors. Sector risk is the risk that securities of companies within specific sectors of the economy can perform differently than the overall market. For example, this may be due to changes in the regulatory or competitive environment or changes in investor perceptions regarding a sector. Because the Fund may allocate relatively more assets to certain sectors than others, the Fund's performance may be more susceptible to any developments which affect those sectors emphasized by the Fund. In addition, the Fund could underperform other funds investing in similar sectors or comparable benchmarks because of the investment manager's choice of securities within such sector.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- Large-capitalization investing risk Large-capitalization stocks as a group could fall out of favor with the market, which may cause the Fund to underperform funds that focus on other types of stocks.
- Limited management, trading cost and rebalance risk Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- *Managed portfolio risk* As an actively managed portfolio, the value of the Fund's investments could decline because the financial condition of an issuer may change (due to such factors as management performance, reduced demand or overall market changes), financial markets may fluctuate or overall prices may decline, or the Sub-Adviser's investment techniques could fail to achieve the Fund's investment objective or negatively affect the Fund's investment performance.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.

- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Regulatory investment limits risk The U.S. "Federal Securities Laws" may limit the amount a Fund may invest in certain securities. These limits may be Fund specific or they may apply to the investment manager. As a result of these regulatory limitations under the Federal Securities Laws, and the asset management and financial industry business activities of the investment manager and its affiliates, the investment manager and the Funds may be prohibited from or limited in effecting transactions in certain securities. The investment manager and the Fund may encounter trading limitations or restrictions because of aggregation issues or other regulatory requirements. The Federal Securities Laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These regulatory investment limits may increase the Fund's expenses and may limit the Fund's performance.
- Securities lending risk Securities lending involves the risk of loss or delays in recovery of the loaned securities or loss of rights in the collateral if the borrower fails to return the security loaned or becomes insolvent.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

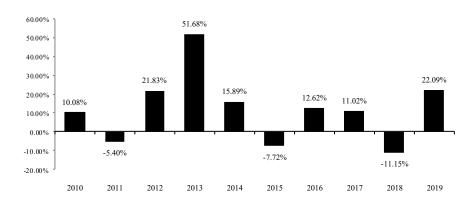

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Value Index as the Fund's secondary benchmark.

Annual Total Returns as of December 31

Class A

Best Quarter (ended 3/31/2013): 16.99%; Worst Quarter (ended 9/30/2011): -20.65%

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/Goldman Sachs International 5 Fund

(formerly, JNL/S&P International 5 Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.30%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.15%	
Total Annual Fund Operating Expenses	0.75%	

¹ "Other Expenses" include an Administrative Fee of 0.15% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL/Goldman Sachs International 5 Fund Class A			
1 year	3 years	5 years	10 years
\$77	\$240	\$417	\$930

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	53%

Portfolio turnover for the period of January 1, 2019 to June 30, 2019 is from the prior sub-adviser, Standard & Poor's Investment Advisory Services LLC.

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in the stocks of foreign companies located in developed countries throughout the world, excluding the United States, that are identified through a disciplined, rules-based investment process. The Fund allocates all of its net assets among the underlying regional strategies listed below:

S&P Asia Pac Ex Japan Strategy – This strategy focuses on companies located in developed countries in the Asia-Pacific (excluding Japan) geographic region that have delivered attractive cash returns to shareholders while seeking to avoid companies with less attractive profitability.

S&P Canada Strategy – This strategy focuses on companies located in Canada that the Sub-Adviser believes to have attractive free cash flows in relation to equity market capitalization while seeking to avoid companies that the Sub-Adviser believes have undergone unattractive changes to capital structure.

S&P Europe Strategy – This strategy focuses on companies located in Western Europe that the Sub-Adviser believes have above average free cash flows in relation to equity market valuation and attractive price momentum.

S&P Japan Strategy – This strategy focuses on companies located in Japan that the Sub-Adviser believes have attractive dividend yields while attempting to avoid overpaying through valuation metrics.

S&P Middle East Strategy – This strategy seeks to achieve capital appreciation by investing liquidity weighted allocations to the common stock of approximately 10% of the companies in the S&P Developed Middle East & Africa LargeMid® Index that the Sub-Adviser believes to be the most attractive. The Sub-Adviser defines attractive stocks as those with the strongest Free Cash Flow Yield, and either above average profitability or favorable price momentum. S&P Quality Rankings are used to exclude companies with the lower quality, helping to filter those that may look attractive on a capital appreciation basis but may have longer term low quality characteristics.

While each of these underlying regional strategies seeks to provide capital appreciation, each underlying regional strategy follows a different principal investment strategy.

Each of the underlying regional strategies invests by selecting from the stock of companies included in a corresponding regional index, each of which is a sub-index of the S&P Developed Ex-U.S. LargeMid Index. The S&P Developed Ex-U.S. LargeMid Index measures the performance of companies located in developed countries around the world, excluding the United States. As of December 31, 2019, the range of market capitalizations of companies included in the index was between \$365.23 million and \$321.96 billion. The size of companies in the S&P Developed Ex-U.S. LargeMid Index changes with market conditions, which can result in changes to the market capitalization range of companies in the index.

The securities for each underlying regional strategy are selected only once annually on each stock selection date. The Fund is rebalanced annually between each of the above specialized strategies on or the first business day of March.

Goldman Sachs Asset Management, L.P. ("GSAM") and Mellon Investments Corporation ("Sub-Advisers") generally use a buy and hold strategy, trading only on or around each stock selection date, when cash flow activity occurs, and for dividend reinvestment purposes. The Sub-Advisers may also trade for mergers if the original stock included in the Fund's portfolio is not the surviving company.

The Fund may invest in a combination of exchange-traded funds ("ETFs") to assist with fund rebalances and to meet redemption or purchase requests.

The Fund may invest in financial futures, a type of derivative, to obtain market exposure consistent with the Fund's investment objective and strategies, to provide liquidity for cash flows, to hedge dividend accruals or for other purposes that facilitate meeting the

Fund's objective. In addition, the Fund may use foreign currency forward contracts, a type of derivative, to maintain appropriate currency exposures.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Fund include:

- Accounting risk The Fund bases investment selections, in part, on information drawn from the financial statements of issuers. Financial statements may not be accurate, may reflect differing approaches with respect to auditing and reporting standards and may affect the ability of the Fund's investment manager to identify appropriate investment opportunities.
- Company risk Investments in U.S. and/or foreign-traded equity securities may fluctuate more than the values of other types of securities in response to changes in a particular company's financial condition.
- Stock risk Stock markets may experience significant short-term volatility and may fall sharply at times. Different stock markets may behave differently from each other and U.S. stock markets may move in the opposite direction from one or more foreign stock markets. The prices of individual stocks generally do not all move in the same direction at the same time and a variety of factors can affect the price of a particular company's stock.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by the Fund could decline if the financial condition of the companies the Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- *Model risk* The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- Limited management, trading cost and rebalance risk Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.
- Currency risk Investments in foreign currencies, securities that trade in or receive revenues in foreign currencies, or derivatives that provide exposure to foreign currencies are subject to the risk that those currencies may decline in value or, in the case of hedging positions, that the currency may decline in value relative to the currency being hedged. Currency exchange rates can be volatile and may be affected by a number of factors, such as the general economics of a country, the actions (or inaction) of U.S. and foreign governments or central banks, the imposition of currency controls, and speculation. A decline in the value of a foreign currency versus the U.S. dollar reduces the value in U.S. dollars of investments denominated in that foreign currency.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- *Mid-capitalization investing risk* The prices of securities of mid-capitalization companies may be more volatile than those of larger, more established companies.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.
- Foreign securities risk Investments in, or exposure to, foreign securities involve risks not typically associated with U.S. investments. These risks include, among others, adverse fluctuations in foreign currency values, possible imposition of foreign withholding or other taxes on income payable on the securities, as well as adverse political, social and economic developments, such as political upheaval, acts of terrorism, financial troubles, or natural disasters. Many foreign securities markets, especially those in emerging market countries, are less stable, smaller, less liquid, and less regulated than U.S. securities markets, and the

costs of trading in those markets is often higher than in U.S. securities markets. There may also be less publicly available information about issuers of foreign securities compared to issuers of U.S. securities. In addition, the economies of certain foreign markets may not compare favorably with the economy of the United States with respect to issues such as growth of gross national product, reinvestment of capital, resources and balance of payments position.

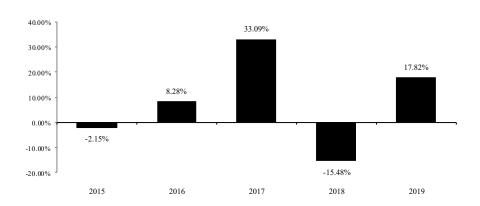

- European investment risk Investing in Europe involves many of the same risks as investing in foreign securities. In addition, since Europe includes both developed and emerging markets, investments by the Fund will be subject to the risks associated with investments in such markets. Performance is expected to be closely tied to social, political, and economic conditions within Europe and to be more volatile than the performance of more geographically diversified funds. Additionally, the United Kingdom's withdrawal from the EU, commonly known as "Brexit," may have significant political and financial consequences for Eurozone markets, including greater market volatility and illiquidity, currency fluctuations, deterioration in economic activity, a decrease in business confidence and an increased likelihood of a recession in the United Kingdom and the EU. The withdrawal agreement entered into between the United Kingdom and the EU entered into force on January 31, 2020, at which time the United Kingdom ceased to be a member of the EU. Following the withdrawal, there will be an eleven-month transition period, ending December 31, 2020, during which the United Kingdom will negotiate its future relationship with the EU. Brexit has already resulted in significant volatility in European and global financial markets and uncertainty about the integrity and functioning of the EU, both of which may persist for an extended period of time.
- Portfolio turnover risk Frequent changes in the securities held by a Fund, including investments made on a shorter-term basis or in derivative instruments or in instruments with a maturity of one year or less at the time of acquisition, may increase transaction costs, which may reduce performance.
- Pacific Rim investing risk The Pacific Rim economies are in various stages of economic development. Many of the Pacific Rim economies may be intertwined, so they may experience recessions at the same time. Furthermore, many of the Pacific Rim economies are characterized by high inflation, undeveloped financial services sectors, heavy reliance on international trade, frequent currency fluctuations, devaluations, or restrictions, political and social instability, and less efficient markets. If the Fund concentrates investments in Pacific Rim markets, the Fund's performance is expected to be closely tied to social, political, and economic conditions within the Pacific Rim region and to be more volatile than the performance of more geographically diversified funds.
- Financial services risk An investment in issuers in the financial services sector may be adversely affected by, among other things: (i) changes in the regulatory framework or interest rates that may negatively affect financial service businesses; (ii) exposure of a financial institution to a non-diversified or concentrated loan portfolio; (iii) exposure to financial leverage and/or investments or agreements which, under certain circumstances, may lead to losses (e.g., sub-prime loans); and (iv) the risk that a market shock or other unexpected market, economic, political, regulatory, or other event might lead to a sudden decline in the values of most or all companies in the financial services sector.
- Derivatives risk Investments in derivatives, which are financial instruments whose value depends on, or is derived from, the value of underlying assets, reference rates, or indices, can be highly volatile and may be subject to transaction costs and certain risks, such as unanticipated changes in securities prices and global currency investment. Derivatives also are subject to leverage risk, liquidity risk, interest rate risk, market risk, counterparty risk, and credit risk. They also involve the risk of mispricing or improper valuation and the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, interest rate or index. Gains or losses from derivatives can be substantially greater than the derivatives' original cost. Certain derivatives transactions may subject the Fund to counterparty risk.
- Exchange-traded funds investing risk An investment in an ETF generally presents the following risks: (i) the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objectives, strategies and policies; (ii) the risk that an ETF may fail to accurately track the market segment or index that underlies its investment objective; (iii) price fluctuation, resulting in a loss to the Fund; (iv) the risk that an ETF may trade at a discount to its net asset value; (v) the risk that an active market for an ETF's shares may not develop or be maintained; and (vi) the risk that an ETF may no longer meet the listing requirements of any applicable exchanges on which that ETF is listed. When the Fund invests in an ETF, shareholders of the Fund bear their proportionate share of the ETF's fees and expenses as well as their share of the Fund's fees and expenses.
- Forward and futures contract risk The successful use of forward and futures contracts draws upon the Sub-Adviser's skill and experience with respect to such instruments and are subject to special risks including, but not limited to: (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty, clearing member or clearinghouse will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.
- Passive investment risk The Fund is not actively managed. Unlike with an actively managed fund, the Fund does not use techniques or defensive strategies designed to lessen the effects of market volatility or to reduce the impact of periods of market decline. This means that, based on market and economic conditions, the Fund's performance could be lower than actively managed funds that realign their portfolios more frequently based on the real-time market trends.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. Performance prior to July 1, 2019 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. Performance results include the effect of expense waiver/reduction arrangements for some or all of the periods shown. If such arrangements had not been in place, performance for those periods would have been lower. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund's shareholders are separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. Accordingly, the Fund's dividends and other distributions generally are not taxable to you, the contract owner or plan participant, but no further discussion is included about the U.S. federal income tax consequences to you. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL/Goldman Sachs 4 Fund (formerly, JNL/S&P 4 Fund)

Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital appreciation.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.00%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.05%	
Acquired Fund Fees and Expenses ²	0.36%	
Total Annual Fund Operating Expenses	0.71%	

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

Ī	JNL/Goldman Sachs 4 Fund Class A			
Ī	1 year	3 years	5 years	10 years
ſ	\$73	\$227	\$395	\$883

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	11%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of the following Funds ("Underlying Funds"):

- 25% in the JNL/Goldman Sachs Competitive Advantage Fund;
- 25% in the JNL/Goldman Sachs Dividend Income & Growth Fund;
- 25% in the JNL/Goldman Sachs Intrinsic Value Fund; and
- 25% in the JNL/Goldman Sachs Total Yield Fund.

Under all market conditions, the Fund seeks to maintain the aforementioned target weights to the Underlying Funds, although market movements may result in some variance around the target weights. The daily flows in and out of the Fund are allocated in a manner to help minimize dispersion from the target weights of the Underlying Funds.

The investment policies and risks of the Underlying Funds are further described elsewhere in this Prospectus. It should be noted that the Fund's investment objective and investment strategies remain constant regardless of which Underlying Funds the Fund is invested in

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes of Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.

- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Investment style risk The returns from a certain investment style may be lower than the returns from the overall stock market. Growth stock prices frequently reflect projections of future earnings or revenues, and if earnings growth expectations are not met, their stock prices will likely fall, which may reduce the value of a Fund's investment in those stocks. Value stocks may not increase in price if other investors fail to recognize the company's value or the factors that are expected to increase the price of the security do not occur. Over market cycles, different investment styles may sometimes outperform other investment styles (for example, growth investing may outperform value investing).
- *Model risk* The Fund bears the risk that the proprietary quantitative models used by the portfolio managers will not be successful in identifying securities that will help the Fund achieve its investment objectives, which may cause the Fund to underperform its benchmark or other funds with a similar investment objective.
- Limited management, trading cost and rebalance risk Investing primarily according to specific, mechanical criteria applied on a specific date each year may prevent a Fund from responding to market fluctuations or changes in the financial condition or business prospects of the selected companies during the year.

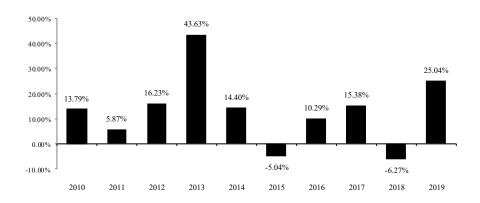

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of a broad-based securities market index which has investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Consistent with the Fund's principal investment strategies, the Fund uses the S&P 500 Value Index as the Fund's secondary benchmark.

Annual Total Returns as of December 31

Class A

Best Quarter (ended 3/31/2013): 14.92%; Worst Quarter (ended 12/31/2018): -13.91%

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek the generation of income through investment in other funds (the "Underlying Funds").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses			
(Expenses that you pay each year as a percentage of the value of your investment)			
	Class A		
Management Fee	0.13%		
Distribution and/or Service (12b-1) Fees	0.30%		
Other Expenses ¹	0.05%		
Acquired Fund Fees and Expenses ²	0.70%		
Total Annual Fund Operating Expenses ³	1.18%		

- ¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.
- ³ Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the

end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Conservative Allocation Fund Class A				
1 year 3 years 5 years 10 years				
\$120	\$375	\$649	\$1,432	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	32%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of the Underlying Funds. The Fund allocates its assets to Underlying Funds that invest primarily in fixed income and other income-oriented securities (including high-yield ("junk") bonds) of issuers in the U.S. and foreign countries, including emerging markets. The Underlying Funds in which the Fund may invest each are a separate series of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the "Additional Information About Each Fund" section of the Prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 0% to 40% of its assets to Underlying Funds that invest primarily in equity securities, 60% to 100% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed Income and International Fixed Income investment categories to be funds that invest primarily in fixed income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Each Underlying Fund has its own investment objective and invests in certain types of securities or other assets in order to implement its investment strategy and seek to achieve its investment objective. Those types of securities or other assets include, but are not limited to: equity securities (such as common stock, preferred stock, and convertible securities), equity futures, equity swaps, currency forwards, currency futures, commodity futures and swaps, bond futures, fixed income swaps, interest rate swaps, and inflation swaps; U.S. and foreign government bonds, including inflation protected bonds (such as Treasury Inflation Protected Securities); bank loans; cash and cash equivalents, including but not limited to money market fund shares. These holdings can include investment exposure to both developed and emerging markets, and may be illiquid or thinly traded. Securities held by the Underlying Funds may be denominated in U.S. and/or non-U.S. currencies.

An Underlying Fund may be leveraged and therefore could be subject to a heightened risk of loss. The leverage involved in certain derivative transactions may result in an Underlying Fund's net asset value being more sensitive to changes in the value of the related investment.

Some of the Underlying Funds, particularly those classified as fixed-income strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategies.

In determining allocations to any particular Underlying Fund, the Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or

other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- High-yield bonds, lower-rated bonds, and unrated securities risk High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

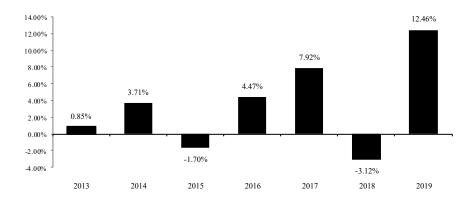

The performance data includes the performance of the Fund, then a series of the Jackson Variable Series Trust for periods before the Fund's registration statement became effective. Effective April 27, 2020, the Fund will be combined with JNL/Nicholas Convertible Arbitrage Fund (the "Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Conservative Index with the Morningstar Conservative Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 20% MSCI All Country World Index (Net), 80% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL Moderate Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek a balance between the generation of income and the long-term growth of capital through investment in other funds (the "Underlying Funds").

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment)

Not Applicable

Annual Fund Operating Expenses				
(Expenses that you pay each year as a percentage of the value of your investment)				
	Class A			
Management Fee	0.12%			
Distribution and/or Service (12b-1) Fees	0.30%			
Other Expenses ¹	0.05%			
Acquired Fund Fees and Expenses ²	0.73%			
Total Annual Fund Operating Expenses ³	1.20%			

- ¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").
- ² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.
- ³ Expense information has been restated to reflect current fees.

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the

end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

JNL Moderate Allocation Fund Class A				
1 year 3 years 5 years 10 years				
\$122	\$381	\$660	\$1,455	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	22%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of the Underlying Funds. The Fund allocates its assets to Underlying Funds that invest primarily in fixed income and other income-oriented securities (including high-yield ("junk") bonds) as well as dividend-paying equity securities of issuers in the U.S. and foreign countries, including emerging markets. The Underlying Funds in which the Fund may invest each are a separate series of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the "Additional Information About Each Fund" section of the Prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 20% to 60% of its assets to Underlying Funds that invest primarily in equity securities, 40% to 80% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed Income and International Fixed Income investment categories to be funds that invest primarily in fixed income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Each Underlying Fund has its own investment objective and invests in certain types of securities or other assets in order to implement its investment strategy and seek to achieve its investment objective. Those types of securities or other assets include, but are not limited to: equity securities (such as common stock, preferred stock, and convertible securities), equity futures, equity swaps, currency forwards, currency futures, commodity futures and swaps, bond futures, fixed income swaps, interest rate swaps, and inflation swaps; U.S. and foreign government bonds, including inflation protected bonds (such as Treasury Inflation Protected Securities); bank loans; cash and cash equivalents, including but not limited to money market fund shares. These holdings can include investment exposure to both developed and emerging markets, and may be illiquid or thinly traded. Securities held by the Underlying Funds may be denominated in U.S. and/or non-U.S. currencies.

An Underlying Fund may be leveraged and therefore could be subject to a heightened risk of loss. The leverage involved in certain derivative transactions may result in an Underlying Fund's net asset value being more sensitive to changes in the value of the related investment.

Some of the Underlying Funds, particularly those classified as fixed-income strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategies.

In determining allocations to any particular Underlying Fund, the Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

- Allocation risk The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such
 factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate
 mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in
 market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.
- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or

other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.

- High-yield bonds, lower-rated bonds, and unrated securities risk High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.
- Foreign regulatory risk The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

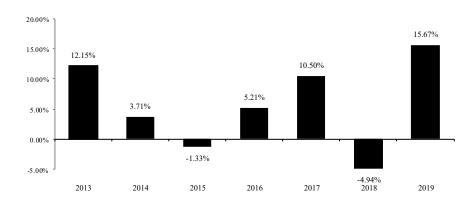

The performance data includes the performance of the Fund, then a series of the Jackson Variable Series Trust for periods before the Fund's registration statement became effective. Effective April 27, 2020, the Fund will be combined with JNL Institutional Alt 50 Fund (the "Acquired Fund"), a series of JNL Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Conservative Index with the Morningstar Moderately Conservative Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 40% MSCI All Country World Index (Net), 60% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL Moderate Growth Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objectives. The investment objective of the Fund is to seek capital growth. Current income is a secondary objective.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)			
	Class A		
Management Fee	0.09%		
Distribution and/or Service (12b-1) Fees	0.30%		
Other Expenses ¹	0.05%		
Acquired Fund Fees and Expenses ²	0.74%		
Total Annual Fund Operating Expenses	1.18%		

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL Moderate Growth Allocation Fund Class A				
1 year	5 years	10 years		
\$120	\$375	\$649	\$1,432	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	17%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 40% to 80% of its assets to Underlying Funds that invest primarily in equity securities, 20% to 60% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

In determining allocations to any particular Underlying Fund, the Fund's Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

Allocation risk – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such
factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate
mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in
market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.

- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.

• Foreign regulatory risk – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to August 29, 2011 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

Effective September 25, 2017, the Fund was combined with the JNAM Guidance – Moderate Growth Fund, a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the JNAM Guidance – Moderate Growth Fund.

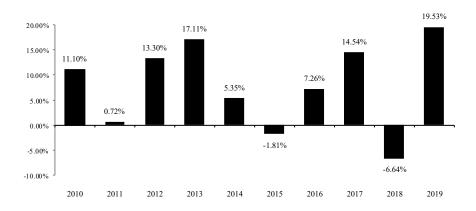

The performance data includes the performance of the Fund, then a series of the Jackson Variable Series Trust for periods before the Fund's registration statement became effective. Effective April 27, 2020, the Fund will be combined with JNL Institutional Alt 25 Fund, a series of JNL Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the JNL Institutional Alt 25 Fund.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderate Index with the Morningstar Moderate Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 60% MSCI All Country World Index (Net), 40% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

JNL Growth Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is to seek capital growth and current income.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.09%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.05%	
Acquired Fund Fees and Expenses ²	0.75%	
Total Annual Fund Operating Expenses	1.19%	

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL Growth Allocation Fund Class A			
1 year	3 years	5 years	10 years
\$121	\$378	\$654	\$1,443

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	13%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 60% to 100% of its assets to Underlying Funds that invest primarily in equity securities, 0% to 40% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

In determining allocations to any particular Underlying Fund, the Fund's Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

• Allocation risk – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.

- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.

• Foreign regulatory risk – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to August 29, 2011 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

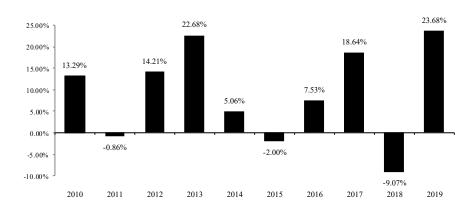

Effective September 25, 2017, the Fund was combined with the JNAM Guidance – Growth Fund (the "Acquired Fund"), a series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Fund.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Aggressive Index with the Morningstar Moderately Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 80% MSCI All Country World Index (Net), 20% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

JNL Aggressive Growth Allocation Fund Class A

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. You can find the Fund's Prospectus and other information about the Fund, including the Statement of Additional Information ("SAI") and most recent reports to shareholders, online at http://hosted.rightprospectus.com/Jackson/JNLSeriesTrust. You can also get this information at no cost by calling 1-800-644-4565 (Annuity and Life Service Center), 1-800-599-5651 (NY Annuity and Life Service Center), 1-800-777-7779 (for contracts purchased through a bank or financial institution) or 1-888-464-7779 (for NY contracts purchased through a bank or financial institution), or by sending an email request to ProspectusRequest@jackson.com. The current Prospectus and SAI, both dated April 27, 2020, as amended, are incorporated by reference into (which means they legally are a part of) this Summary Prospectus.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Funds' annual and semi annual shareholder reports will no longer be sent by mail, unless you specifically request paper copies of the reports from Jackson. Instead, the reports will be made available on Jackson's website (www.jackson.com), and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from Jackson electronically by doing one of the following:

- Mailing in the postage-paid card on the cover of this report;
- Calling 1-866-349-4564; or
- Signing up on www.jackson.com

Beginning on January 1, 2019, you may elect to receive all future reports in paper free of charge. You can inform Jackson that you wish to continue receiving paper copies of your shareholder reports by contacting the appropriate Jackson Service Center. Your election to receive reports in paper will apply to all Funds held in each variable contract you purchased from Jackson.

Investment Objective. The investment objective of the Fund is capital growth.

Expenses. This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund.

The expenses do not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included.

Shareholder Fees (fees paid directly from your investment) Not Applicable

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)		
	Class A	
Management Fee	0.10%	
Distribution and/or Service (12b-1) Fees	0.30%	
Other Expenses ¹	0.05%	
Acquired Fund Fees and Expenses ²	0.76%	
Total Annual Fund Operating Expenses	1.21%	

¹ "Other Expenses" include an Administrative Fee of 0.05% which is payable to Jackson National Asset Management, LLC ("JNAM" or "Adviser").

Expense Example. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. Also, this example does not reflect the expenses of the variable insurance contracts or the separate account through which you indirectly invest in the Fund, whichever may be applicable, and the total expenses would be higher if they were included. The table below shows the expenses you would pay on a \$10,000 investment, assuming (1) 5% annual return; (2) redemption at the end of each time period; and (3) that the Fund operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions, your costs would be:

² Acquired Fund Fees and Expenses are the indirect expenses of investing in other investment companies. Accordingly, the expense ratio presented in the Financial Highlights section of the prospectus will not correlate to the Total Annual Fund Operating Expenses disclosed above.

JNL Aggressive Growth Allocation Fund Class A				
1 year	3 years	5 years	10 years	
\$123	\$384	\$665	\$1,466	

Portfolio Turnover (% of average value of portfolio). The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in Annual Fund Operating Expenses or in the Expense Example above, affect the Fund's performance.

Period	
1/1/2019 - 12/31/2019	17%

Principal Investment Strategies. The Fund seeks to achieve its objective by investing in Class I shares of a diversified group of other Funds ("Underlying Funds"). The Underlying Funds in which the Fund may invest are a part of the JNL Series Trust and JNL Investors Series Trust. Not all Funds of the JNL Series Trust and JNL Investors Series Trust are available as Underlying Funds. Please refer to the statutory prospectus for a list of available Underlying Funds.

Under normal circumstances, the Fund allocates approximately 70% to 100% of its assets to Underlying Funds that invest primarily in equity securities, 0% to 30% to Underlying Funds that invest primarily in fixed-income securities and 0% to 20% of its assets to Underlying Funds that invest primarily in money market securities.

The Fund groups the Underlying Funds according to investment categories set forth below:

The Fund allocates its assets among Underlying Funds categorized by the Adviser into the following investment categories:

- Alternative Assets
- Alternative Strategies
- Domestic/Global Equity
- Domestic/Global Fixed-income
- International
- International Fixed-Income
- Sector
- Tactical Management

The Fund considers the Underlying Funds in the Domestic/Global Fixed-Income and International Fixed-Income investment categories to be funds that invest primarily in fixed-income securities, and the Underlying Funds in the Domestic/Global Equity, International, Sector, and Specialty investment categories to be funds that invest primarily in equity securities. The Underlying Funds in the Risk Management and Tactical Management investment categories include funds that can invest in a variety of asset classes in various proportions, may take measures to manage risk and/or adapt to prevailing market conditions and may have significant exposure to both fixed-income and equity securities. To the extent the Fund invests in one of these Underlying Funds, the Fund's exposure to fixed-income securities and equity securities will be allocated according to the Underlying Fund's relative exposure to these asset classes. The Fund considers the Underlying Funds in the Alternative Assets and Alternative Strategies investment categories to be funds that invest primarily in alternative assets and employ alternative strategies.

Some of the Underlying Funds, particularly those classified as Fixed Income Strategies, may hold a significant amount of asset-backed securities, mortgage-backed securities, derivatives, and/or junk bonds in order to execute their investment strategy.

In determining allocations to any particular Underlying Fund, the Fund's Adviser considers, among other things, long-term market and economic conditions, historical performance of each Underlying Fund, and expected long-term performance of each Underlying Fund, as well as diversification to control overall portfolio risk exposure.

The Adviser may change the Underlying Funds in which the Fund invests from time to time at its discretion without notice or shareholder approval. Therefore, the Fund may invest in Underlying Funds that are not listed in the statutory prospectus.

Principal Risks of Investing in the Fund. An investment in the Fund is not guaranteed. As with any mutual fund, the value of the Fund's shares will change, and you could lose money by investing in the Fund. The principal risks associated with investing in the Underlying Funds include:

• Allocation risk – The Fund's ability to achieve its investment objective depends upon the investment manager's analysis of such factors as macroeconomic trends, outlooks for various industries and asset class valuations, and its ability to select an appropriate mix of asset classes and Underlying Funds based on its analysis of such factors. The Fund is subject to the risk of changes in market, investment, and economic conditions in the selection and percentages of allocations among Underlying Funds.

- *Underlying funds risk* The ability of the Fund to achieve its investment objective will depend in part upon the allocations of investments in the Underlying Funds and their ability to achieve their investment objectives.
- Market risk Portfolio securities may decline in value due to factors affecting securities markets generally, such as real or perceived adverse economic, political, or regulatory conditions, inflation, changes in interest or currency rates or adverse investor sentiment, public health issues, war, terrorism or natural disasters, among others. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. The values of securities may fall due to factors affecting a particular issuer, industry or the securities market as a whole.
- Equity securities risk Common and preferred stocks represent equity ownership in a company. Stock markets are volatile, and equity securities generally have greater price volatility than fixed-income securities. The price of equity or equity-related securities will fluctuate and can decline and reduce the value of a portfolio investing in equity or equity-related securities. The value of equity or equity-related securities purchased by an Underlying Fund could decline if the financial condition of the companies an Underlying Fund invests in decline or if overall market and economic conditions deteriorate. They may also decline due to factors that affect a particular industry or industries, such as labor shortages or an increase in production costs and competitive conditions within an industry. In addition, they may decline due to general market conditions that are not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates or generally adverse investor sentiment.
- Mid-capitalization and small-capitalization investing risk The securities of mid-capitalization and small-capitalization companies involve greater risks than those associated with larger, more established companies and may be subject to more abrupt or erratic price movements. Securities of such issuers may lack sufficient market liquidity to enable a Fund to effect sales at an advantageous time or without a substantial drop in price. Both mid-capitalization and small-capitalization companies often have narrower markets and more limited managerial and financial resources than larger, more established companies. As a result, their performance can be more volatile and they face greater risk of business failure, which could increase the volatility of a Fund's portfolio. Generally, the smaller the company size, the greater these risks become.
- Fixed-income risk The price of fixed-income securities responds to economic developments, particularly interest rate changes, as well as to perceptions about the credit risk of individual issuers. Rising interest rates generally will cause the price of bonds and other fixed-income debt securities to fall. Falling interest rates may cause an issuer to redeem, call or refinance a security before its stated maturity, which may result in the Fund having to reinvest the proceeds in lower yielding securities. Bonds and other fixed-income debt securities are subject to credit risk, which is the possibility that the credit strength of an issuer will weaken and/or an issuer of a fixed-income security will fail to make timely payments of principal or interest and the security will go into default.
- Interest rate risk When interest rates increase, fixed-income securities generally will decline in value. Long-term fixed income securities normally have more price volatility than short-term fixed income securities. The value of certain equity investments, such as utilities and real estate-related securities, may also be sensitive to interest rate changes.
- Credit risk The price of a debt instrument can decline in response to changes in the financial condition of the issuer, borrower, guarantor, counterparty, or other entity responsible for payment. An Underlying Fund could lose money if the issuer or guarantor of a fixed-income security, or the counterparty to a derivatives contract, repurchase agreement or a loan of portfolio securities, is unable or unwilling to make timely principal and/or interest payments, or to otherwise honor its obligations.
- Emerging markets and less developed countries risk Emerging market and less developed countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America and Africa. Investments in, or exposure to, securities that are tied economically to emerging market and less developed countries are subject to all of the risks of investments in, or exposure to, foreign securities, generally to a greater extent than in developed markets, among other risks. Investments in securities that are tied economically to emerging markets involve greater risk from economic and political systems that typically are less developed, and likely to be less stable, than those in more advanced countries. The Fund also will be subject to the risk of adverse foreign currency rate fluctuations. Emerging market and less developed countries may also have economies that are predominantly based on only a few industries or dependent on revenues from particular commodities. The risks of nationalization, expropriation or other confiscation of assets of non-U.S. issuers is also greater in emerging and less developed countries. As a result of these risks, investments in securities tied economically to emerging markets tend to be more volatile than investments in securities of developed countries.
- *High-yield bonds, lower-rated bonds, and unrated securities risk* High-yield bonds, lower-rated bonds, and unrated securities are broadly referred to as "junk bonds," and are considered below "investment-grade" by national ratings agencies. Junk bonds are subject to the increased risk of an issuer's inability to meet principal and interest payment obligations. As a result, an investment in junk bonds is considered speculative. High-yield bonds may be subject to liquidity risk, and the Fund may not be able to sell a high-yield bond at the price at which it is currently valued.
- Investment in other investment companies risk As with other investments, investments in other investment companies are subject to market and selection risk. In addition, if the Fund acquires shares of investment companies, including ones affiliated with the Fund, shareholders bear both their proportionate share of expenses in the Fund (including management and advisory fees) and, indirectly, the expenses of the investment companies in which the Fund invests. To the extent that shares of the Fund are held by an affiliated fund, the ability of the Fund itself to invest in other investment companies may be limited.

Foreign regulatory risk – The Adviser is an indirect wholly owned subsidiary of Prudential plc, a publicly traded company incorporated in the United Kingdom and is not affiliated in any manner with Prudential Financial Inc., a company whose principal place of business is in the United States of America or with The Prudential Assurance Company Ltd, a subsidiary of M&G plc, a company incorporated in the United Kingdom. Through its ownership structure, the Adviser has a number of global financial industry affiliates. As a result of this structure, and the asset management and financial industry business activities of the Adviser and its affiliates, the Adviser and the Fund may be prohibited or limited in effecting transactions in certain securities. Additionally, the Adviser and the Fund may encounter trading limitations or restrictions because of aggregation issues or other foreign regulatory requirements. Foreign regulators or foreign laws may impose position limits on securities held by the Fund, and the Fund may be limited as to which securities it may purchase or sell, as well as the timing of such purchases or sales. These foreign regulatory limits may increase the Fund's expenses and may limit the Fund's performance.

Performance. The performance information shown provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns compared with those of broad-based securities market indices and a composite index which have investment characteristics similar to those of the Fund. Performance prior to August 29, 2011 reflects the Fund's results when managed by the former sub-adviser, Standard & Poor's Investment Advisory Services LLC. The Fund's past performance is not necessarily an indication of how the Fund will perform in the future.

The returns shown in the bar chart and table do not include charges that will be imposed by variable insurance products. If these amounts were reflected, returns would be less than those shown.

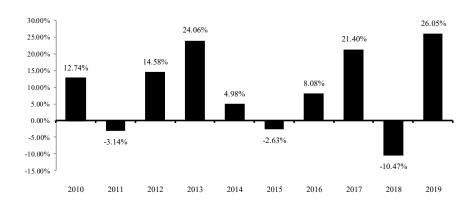

Effective September 25, 2017, the Fund was combined with the JNAM Guidance – Equity 100 Fund and JNAM Guidance – Maximum Growth Fund (together, the "Acquired Funds"), series of Jackson Variable Series Trust, with the Fund as the surviving Fund. The performance shown is the Fund's historic performance and does not reflect the performance of the Acquired Funds.

Effective June 24, 2019, for consistency with the Fund's principal investment strategies, the Fund replaced the Dow Jones Moderately Aggressive Index with the Morningstar Aggressive Target Risk Index as the Fund's primary benchmark.

Consistent with the Fund's principal investment strategies, the Fund uses the 90% MSCI All Country World Index (Net), 10% Bloomberg Barclays U.S. Aggregate Bond Index as the Fund's secondary benchmark.

Purchase and Redemption of Fund Shares

Only separate accounts of Jackson National Life Insurance Company ("Jackson") or Jackson National Life Insurance Company of New York ("Jackson NY") and series, including fund of funds, of registered investment companies in which either or both of those insurance companies invest may purchase shares of the Fund. You may invest indirectly in the Fund through your purchase of a variable annuity or life insurance contract issued by a separate account of Jackson or Jackson NY that invests directly, or through a fund of funds, in this Fund. Any minimum initial or subsequent investment requirements and redemption procedures are governed by the applicable separate account through which you invest indirectly.

This Fund serves as an underlying investment by insurance companies, affiliated investment companies, and retirement plans for funding variable annuity and life insurance contracts and retirement plans.

Tax Information

The Fund expects to be treated as a partnership for U.S. federal income tax purposes, and does not expect to make regular distributions (other than in redemption of Fund shares) to shareholders, which generally are the participating insurance companies investing in the Fund through separate accounts of Jackson or Jackson NY and mutual funds owned directly or indirectly by such separate accounts. You should consult the prospectus of the appropriate separate account or description of the plan for a discussion of the U.S. federal income tax consequences to you of your contract, policy, or plan.

Payments to Broker-Dealers and Financial Intermediaries

If you invest in the Fund under a variable insurance contract or a plan that offers a variable insurance contract as a plan option through a broker-dealer or other financial intermediary (such as a financial institution), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's Website for more information.

APPENDIX A

The JNL/Goldman Sachs Managed Conservative Fund, the JNL/Goldman Sachs Managed Moderate Fund, the JNL/Goldman Sachs Managed Moderate Growth Fund, the JNL/Goldman Sachs Managed Growth Fund, the JNL/Goldman Sachs Managed Aggressive Growth Fund, and the JNL/Goldman Sachs 4 Fund are also referred to in this Prospectus as the JNL/Goldman Sachs Managed Funds. The JNL/Goldman Sachs Managed Funds do not include the JNL/Goldman Sachs Competitive Advantage Fund, the JNL/Goldman Sachs Dividend Income & Growth Fund, the JNL/Goldman Sachs Intrinsic Value Fund, the JNL/Goldman Sachs Total Yield Fund, and the JNL/Goldman Sachs International 5 Fund.

The JNL Conservative Allocation Fund, JNL Moderate Allocation Fund, JNL Moderate Growth Allocation Fund, the JNL Growth Allocation Fund, and the JNL Aggressive Growth Allocation Fund are also referred to in this Prospectus as the JNL Allocation Funds.

Certain Funds utilize a master-feeder structure.

With the exception of the JNL S&P 500 Index Fund, which only offers Class I shares, each Fund offers two classes of shares, Class A and Class I. Class A shares are described in this Prospectus.

Effective June 24, 2019, the Investment Divisions investing in the JNL/Vanguard Small Company Growth Fund ("Closed Fund") was closed. Please refer to the contract prospectus for additional information.

Effective June 24, 2019, the JNL/Mellon Capital 10 x 10 Fund merged into the JNL/Mellon Index 5 Fund.

Effective June 24, 2019, the JNL/AQR Risk Parity Fund, a series of Jackson Variable Series Trust, merged into the JNL/T. Rowe Price Managed Volatility Balanced Fund.

Effective June 24, 2019, the JNL/BlackRock Global Long Short Credit Fund, a series of Jackson Variable Series Trust, merged into the JNL/Crescent High Income Fund.

Effective June 24, 2019, the JNL/PPM America Long Short Credit Fund, a series of Jackson Variable Series Trust, merged into the JNL/PPM America High Yield Bond Fund.

Effective June 24, 2019, the JNL/Mellon Capital JNL 5 Fund, a series of JNL Variable Fund LLC, merged into the JNL/RAFI® Multi-Factor U.S. Equity Fund, a new series of JNL Series Trust.

Effective June 24, 2019, the JNL/Mellon Capital S&P SMid 60 Fund, a series of JNL Variable Fund LLC, merged into the JNL/RAFI® Fundamental U.S. Small Cap Fund, a new series of JNL Series Trust.

Effective April 27, 2020, the JNL/The London Company Focused U.S. Equity Fund, a series of Jackson Variable Series Trust, will merge into the JNL/Morningstar Wide Moat Index Fund.

Effective April 27, 2020, the JNL/Mellon S&P 1500 Value Index Fund will merge into the JNL/Mellon DowSM Index Fund, a new series of JNL Series Trust.

Effective April 27, 2020, the JNL/Mellon S&P 1500 Growth Index Fund will merge into the JNL/Mellon Nasdaq® 100 Index Fund, a new series of JNL Series Trust.

Effective April 27, 2020, the JNL/VanEck International Gold Fund, a series of Jackson Variable Series Trust, will merge into the JNL/BlackRock Global Natural Resources Fund.

Effective April 27, 2020, the JNL/PPM America Value Equity Fund will merge into the JNL/JPMorgan Growth & Income Fund (formerly, JNL/Franklin Templeton Mutual Shares Fund).

Effective April 27, 2020, the JNL/S&P Mid 3 Fund will merge into the JNL/Mellon S&P 400 MidCap Index Fund.

Effective April 27, 2020, the JNL/Franklin Templeton Global Fund will merge into the JNL/Loomis Sayles Global Growth Fund.

Effective April 27, 2020, the JNL/Goldman Sachs Emerging Markets Debt Fund will merge into the JNL/DoubleLine® Emerging Markets Fixed Income Fund.

Effective April 27, 2020, the JNL Institutional Alt 100 Fund, a series of Jackson Variable Series Trust, will merge into the JNL Multi-Manager Alternative Fund.

Effective April 27, 2020, the JNL Institutional Alt 25 Fund will merge into the JNL Moderate Growth Allocation Fund.

Effective April 27, 2020, the JNL Institutional Alt 50 Fund will merge into the JNL Moderate Allocation Fund, a new series of JNL Series Trust.

Effective April 27, 2020, the JNL/FAMCO Flex Core Covered Call Fund, a series of Jackson Variable Series Trust, will merge into the JNL/JPMorgan Hedged Equity Fund.

Effective April 27, 2020, the JNL/Nicholas Convertible Arbitrage Fund, a series of Jackson Variable Series Trust, will merge into the JNL Conservative Allocation Fund, a new series of JNL Series Trust.

Effective April 27, 2020, the JNL/Eaton Vance Global Macro Absolute Return Advantage Fund, a series of Jackson Variable Series Trust, will merge into the JNL/Franklin Templeton Global Multisector Bond Fund.

Effective April 27, 2020, the JNL/Neuberger Berman Currency Fund, a series of Jackson Variable Series Trust, will merge into the JNL/PIMCO Income Fund.

Effective April 27, 2020, the JNL/Scout Unconstrained Bond Fund will merge into the JNL/PIMCO Income Fund.

Effective April 27, 2020, the JNL/Invesco China-India Fund will merge into the JNL Multi-Manager Emerging Markets Equity Fund (formerly, JNL/Lazard Emerging Markets Fund).

Effective April 27, 2020, the JNL/Oppenheimer Emerging Markets Innovator Fund will merge into the JNL Multi-Manager Emerging Markets Equity Fund (formerly, JNL/Lazard Emerging Markets Fund).

Effective April 27, 2020, the JNL/PPM America Mid Cap Value Fund will merge into the JNL/MFS Mid Cap Value Fund.

Effective April 27, 2020, the JNL/FPA + DoubleLine® Flexible Allocation Fund will merge into the JNL/JPMorgan Global Allocation Fund.

FURTHER, NONE OF THE MSCI PARTIES HAS ANY OBLIGATION OR LIABILITY TO THE ISSUER OR OWNERS OF THE MELLON CAPITAL FUNDS OR ANY OTHER PERSON OR ENTITY IN CONNECTION WITH THE ADMINISTRATION, MARKETING OR OFFERING OF THE MELLON FUNDS.

ALTHOUGH MSCI SHALL OBTAIN INFORMATION FOR INCLUSION IN OR FOR USE IN THE CALCULATION OF THE MSCI INDEXES FROM SOURCES THAT MSCI CONSIDERS RELIABLE, NONE OF THE MSCI PARTIES WARRANTS OR GUARANTEES THE ORIGINALITY, ACCURACY AND/OR THE COMPLETENESS OF ANY MSCI INDEX OR ANY DATA INCLUDED THEREIN. NONE OF THE MSCI PARTIES MAKES ANY WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE ISSUER OF THE MELLON FUNDS, OWNERS OF THE MELLON FUNDS, OR ANY OTHER PERSON OR ENTITY, FROM THE USE OF ANY MSCI INDEX OR ANY DATA INCLUDED THEREIN. NONE OF THE MSCI PARTIES SHALL HAVE ANY LIABILITY FOR ANY ERRORS, OMISSIONS OR INTERRUPTIONS OF OR IN CONNECTION WITH ANY MSCI INDEX OR ANY DATA INCLUDED THEREIN. FURTHER, NONE OF THE MSCI PARTIES MAKES ANY EXPRESS OR IMPLIED WARRANTIES OF ANY KIND, AND THE MSCI PARTIES HEREBY EXPRESSLY DISCLAIM ALL WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, WITH RESPECT TO EACH MSCI INDEX AND ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL ANY OF THE MSCI PARTIES HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, SPECIAL, PUNITIVE, CONSEQUENTIAL OR ANY OTHER DAMAGES (INCLUDING LOST PROFITS) EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

The S&P 500 Index, S&P MidCap 400 Index, and S&P SmallCap 600 Index, (collectively, the "Indices") are products of S&P Dow Jones Indices LLC or its affiliates ("SPDJI"), and has been licensed for use by Jackson National Life Insurance Company ("Jackson"). Standard & Poor's®, S&P® and S&P 500®, S&P MidCap 400® and S&P SmallCap 600® are registered trademarks of Standard & Poor's Financial Services LLC; Dow Jones® is a registered trademark of Dow Jones Trademark Holdings LLC ("Dow Jones"). The JNL/Mellon S&P 500 Index Fund, JNL/Mellon S&P 400 MidCap Index Fund, JNL/Mellon Small Cap Index Fund, and JNL S&P 500 Index Fund (collectively, the "Products") are not sponsored, endorsed, sold or promoted by SPDJI, Dow Jones, Standard & Poor's Financial Services LLC, or any of their respective affiliates (collectively, "S&P Dow Jones Indices"). S&P Dow Jones Indices makes no representation or warranty, express or implied, to the owners of the Products or any member of the public regarding the advisability of investing in securities generally or in the Products particularly or the ability of the Indices to track general market performance. S&P Dow Jones Indices' only relationship to Jackson with respect to the Indices or the Products is the licensing of the Indices and certain trademarks, service marks and/or trade names of S&P Dow Jones Indices and/or its licensors. The Indices are determined,

composed and calculated by S&P Dow Jones Indices without regard to Jackson or the Products. S&P Dow Jones Indices have no obligation to take the needs of Jackson or the owners of the Products into consideration in determining, composing or calculating the Indices. S&P Dow Jones Indices are not responsible for and have not participated in the determination of the prices, and amount of the Products or the timing of the issuance or sale of the Products in the determination or calculation of the equation by which the Products are to be converted into cash, surrendered or redeemed, as the case may be. S&P Dow Jones Indices have no obligation or liability in connection with the administration, marketing or trading of the Products. There is no assurance that investment products based on the Indices will accurately track index performance or provide positive investment returns. S&P Dow Jones Indices LLC is not an investment advisor. Inclusion of a security within an index is not a recommendation by S&P Dow Jones Indices to buy, sell, or hold such security, nor is it considered to be investment advice. Notwithstanding the foregoing, CME Group Inc. and its affiliates may independently issue and/or sponsor financial products unrelated to Products currently being issued by Jackson, but which may be similar to and competitive with Products. In addition, CME Group Inc. and its affiliates may trade financial products which are linked to the performance of the Index.

S&P DOW JONES INDICES DOES NOT GUARANTEE THE ADEQUACY, ACCURACY, TIMELINESS AND/OR THE COMPLETENESS OF THE INDICES OR ANY DATA RELATED THERETO OR ANY COMMUNICATION, INCLUDING BUT NOT LIMITED TO, ORAL OR WRITTEN COMMUNICATION (INCLUDING ELECTRONIC COMMUNICATIONS) WITH RESPECT THERETO. S&P DOW JONES INDICES SHALL NOT BE SUBJECT TO ANY DAMAGES OR LIABILITY FOR ANY ERRORS, OMISSIONS, OR DELAYS IN CALCULATING THE INDICES. While SPIAS has obtained information from sources it believes to be reliable, SPIAS does not perform an audit and undertakes no duty of due diligence or independent verification of any information it receives.

S&P Global keeps certain activities of its divisions separate from each other in order to preserve the independence and objectivity of their respective activities. As a result, certain divisions of S&P Global may have information that is not available to other S&P Global divisions. S&P Global has established policies and procedures to maintain the confidentiality of certain non-public information received in connection with each analytical process.

S&P Global Ratings does not contribute to or participate in the provision of investment advice. S&P Global Ratings may receive compensation for its ratings and certain analyses, normally from issuers or underwriters of securities or from obligors. S&P Global reserves the right to disseminate its opinions and analyses. S&P Global's public ratings and analyses are made available on its Web sites, www.standardandpoors.com (free of charge), and www.standardandpoors.com (subscription), and may be distributed through other means, including via S&P Global publications and third-party redistributors. Additional information about our ratings fees is available at www.standardandpoors.com/usratingsfees.

S&P Global Market Intelligence and its affiliates provide a wide range of services to, or relating to, many organizations, including issuers of securities, investment advisers, broker-dealers, investment banks, other financial institutions and financial intermediaries, and accordingly may receive fees or other economic benefits from those organizations, including organizations whose securities or services they may recommend, rate, include in model portfolios, evaluate or otherwise address. SPIAS may consider research and other information from affiliates in making its investment recommendations.

The investment policies of certain model portfolios specifically state that among the information SPIAS will consider in evaluating a security are the credit ratings assigned by S&P Global Ratings. SPIAS does not consider the ratings assigned by other credit rating agencies. Credit rating criteria and scales may differ among credit rating agencies. Ratings assigned by other credit rating agencies may reflect more or less favorable opinions of creditworthiness than ratings assigned by S&P Global Ratings.

American Funds Insurance Series® Asset Allocation Fund

Summary prospectus Class 1 shares May 1, 2020

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objective The fund's investment objective is to provide high total return (including income and capital gains) consistent with preservation of capital over the long term.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.27%
Other expenses	0.04
Total annual fund operating expenses	0.31

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$32	\$100	\$174	\$393

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 79% of the average value of its portfolio.

Principal investment strategies In seeking to pursue its investment objective, the fund varies its mix of equity securities, debt securities and money market instruments. Under normal market conditions, the fund's investment adviser expects (but is not required) to maintain an investment mix falling within the following ranges: 40%-80% in equity securities, 20%-50% in debt securities and 0%-40% in money market instruments and cash. As of December 31, 2019, the fund was approximately 65% invested in equity securities, 30% invested in debt securities and 5% invested in money market instruments and cash. The proportion of equities, debt and money market securities held by the fund varies with market conditions and the investment adviser's assessment of their relative attractiveness as investment opportunities.

The fund invests in a diversified portfolio of common stocks and other equity securities, bonds and other intermediate and long-term debt securities, and money market instruments (debt securities maturing in one year or less). The fund may invest up to 15% of its assets in common stocks and other equity securities of issuers domiciled outside the United States and up to 5% of its assets in debt securities of issuers domiciled outside the United States. In addition, the fund may invest up to 25% of its debt assets in lower quality debt securities (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser). Such securities are sometimes referred to as "junk bonds."

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions – The prices of, and the income generated by, the common stocks, bonds and other securities held by the fund may decline - sometimes rapidly or unpredictably - due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks - The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks - Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Investing in debt instruments - The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not quarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing in lower rated debt instruments - Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Investing in securities backed by the U.S. government – Securities backed by the U.S. Treasury or the full faith and credit of the U.S. government are guaranteed only as to the timely payment of interest and principal when held to maturity. Accordingly, the current market values for these securities will fluctuate with changes in interest rates and the credit rating of the U.S. government. Securities issued by government-sponsored entities and federal agencies and instrumentalities that are not backed by the full faith and credit of the U.S. government are neither issued nor guaranteed by the U.S. government.

Liquidity risk - Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

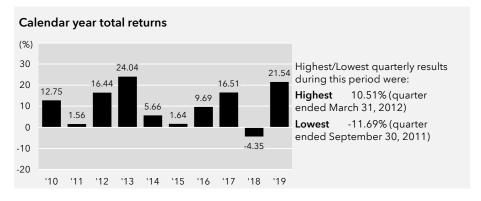

Investing outside the United States - Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Asset allocation - The fund's percentage allocation to equity securities, debt securities and money market instruments could cause the fund to underperform relative to relevant benchmarks and other funds with similar investment objectives.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or quaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The fund has selected the 60%/40% S&P 500 Index/Bloomberg Barclays Index to replace the S&P 500 Index as its broad-based securities market index. The fund's investment adviser believes that the 60%/40% S&P 500 Index/Bloomberg Barclays Index better reflects the market sectors and securities in which the fund primarily invests and the investment strategies employed by the adviser in seeking to achieve the fund's investment objective. The S&P 500 Index reflects the equity market sectors in which the fund invests. The Bloomberg Barclays U.S. Aggregate Index represents the U.S. investment-grade fixed-rate bond market. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 8/1/89)	21.54%	8.59%	10.19%	8.63%
60%/40% S&P 500 Index/Bloomberg Barclays Index (reflects no deductions for sales charges, account fees, expenses or U.S. federal income taxes)	22.18	8.37	9.77	8.60
S&P 500 Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	31.49	11.70	13.56	9.97
Bloomberg Barclays U.S. Aggregate Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	8.72	3.05	3.75	5.91

Management

Investment adviser Capital Research and Management CompanySM

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Alan N. Berro Co-President	20 years	Partner - Capital World Investors
David A. Daigle	11 years	Partner - Capital Fixed Income Investors
Peter Eliot	4 years	Partner - Capital International Investors
Jeffrey T. Lager	13 years	Partner - Capital International Investors
Jin Lee	2 years	Partner - Capital World Investors
James R. Mulally	14 years	Partner - Capital Fixed Income Investors
John R. Queen	4 years	Partner - Capital Fixed Income Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds — and not the holders of variable insurance contracts — are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

American Funds Insurance Series® Blue Chip Income and Growth Fund

Summary prospectus Class 1 shares May 1, 2020

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objectives The fund's investment objectives are to produce income exceeding the average yield on U.S. stocks generally and to provide an opportunity for growth of principal consistent with sound common stock investing.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.39%
Other expenses	0.04
Total annual fund operating expenses	0.43

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$44	\$138	\$241	\$542

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 37% of the average value of its portfolio.

Principal investment strategies Normally, the fund invests at least 80% of its assets in dividend-paying common stocks of larger, more established companies domiciled in the United States with market capitalizations greater than \$4.0 billion. The fund's investment adviser considers these types of investments to be "blue chip" stocks. In seeking to produce a level of current income that exceeds the average yield on U.S. stocks, the fund generally looks to the average yield on stocks of companies listed on the S&P 500 Index. The fund also ordinarily invests at least 90% of its equity assets in the stock of companies whose debt securities are rated at least investment grade by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser. The fund may invest up to 10% of its assets in equity securities of larger companies domiciled outside the United States, so long as they are listed or traded in the United States. The fund invests, under normal market conditions, at least 90% of its assets in equity securities. The fund is designed for investors seeking both income and capital appreciation.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions - The prices of, and the income generated by, the common stocks and other securities held by the fund may decline sometimes rapidly or unpredictably - due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks - The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

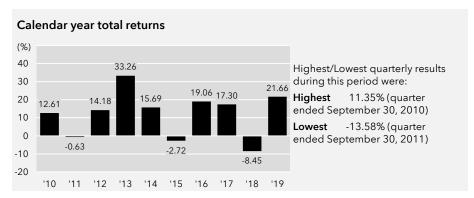

Investing in growth-oriented stocks – Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

Investing outside the United States - Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or quaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 7/5/01)	21.66%	8.63%	11.54%	6.71%
S&P 500 Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	31.49	11.70	13.56	7.54

Management

Investment adviser Capital Research and Management CompanySM

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Christopher D. Buchbinder	13 years	Partner - Capital Research Global Investors
James B. Lovelace	13 years	Partner - Capital Research Global Investors
Alex Sheynkman	2 years	Partner - Capital Research Global Investors
Lawrence R. Solomon	2 years	Partner - Capital Research Global Investors
James Terrile	8 years	Partner - Capital Research Global Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds — and not the holders of variable insurance contracts — are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

American Funds Insurance Series® Capital Income Builder®

Summary prospectus Class 1 shares May 1, 2020

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objectives The fund has two primary investment objectives. It seeks (1) to provide a level of current income that exceeds the average yield on U.S. stocks generally and (2) to provide a growing stream of income over the years. The fund's secondary objective is to provide growth of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.49%
Other expenses	0.05
Total annual fund operating expenses	0.54
Fee waiver*	0.26
Total annual fund operating expenses after fee waiver	0.28

^{*} The investment adviser is currently waiving a portion of its management fee equal to .26% of the fund's net assets. This waiver will be in effect through at least May 1, 2021. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$29	\$147	\$276	\$652

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 72% of the average value of its portfolio.

Principal investment strategies The fund normally invests at least 90% of its assets in income-producing securities (with at least 50% of its assets in common stocks and other equity securities). The fund invests primarily in a broad range of income-producing securities, including common stocks and bonds. In seeking to provide a level of current income that exceeds the average yield on U.S. stocks, the fund generally looks to the average yield on stocks of companies listed on the S&P 500 Index. The fund may also invest significantly in common stocks, bonds and other securities of issuers domiciled outside the United States.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions – The prices of, and the income generated by, the common stocks, bonds and other securities held by the fund may decline - sometimes rapidly or unpredictably - due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations. These risks may be heightened in the case of smaller capitalization stocks.

Issuer risks - The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Investing in debt instruments - The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

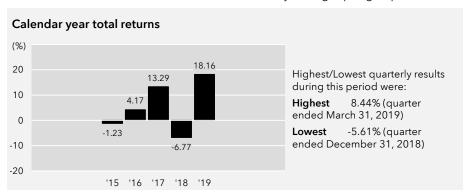

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not quarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The 70%/30% MSCI ACWI/Bloomberg Barclays Index is a composite blend of 70% of the MSCI All Country World Index (ACWI) and 30% of the Bloomberg Barclays U.S. Aggregate Index and represents a broad measure of the global stock and bond markets, including market sectors in which the fund may invest. The Lipper Global Equity Income Funds Average includes funds that disclose investment objectives and/or strategies reasonably comparable to those of the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	Lifetime
Fund (inception date – 5/1/14)	18.16%	5.13%	4.53%
MSCI All Country World Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	26.60	8.41	7.74
Bloomberg Barclays U.S. Aggregate Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	8.72	3.05	3.21
70%/30% MSCI ACWI/Bloomberg Barclays Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	21.21	6.95	6.52
Lipper Global Equity Income Funds Average (reflects no deduction for sales charges, account fees or U.S. federal income taxes)	21.01	6.20	5.38

Management

Investment adviser Capital Research and Management CompanySM

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Alfonso Barroso	Less than 1 year	Partner - Capital Research Global Investors
Grant L. Cambridge	Less than 1 year	Partner - Capital International Investors
Joyce E. Gordon	Less than 1 year	Partner - Capital Research Global Investors

David M. Riley	Less than 1 year	Partner - Capital Research Global Investors
Bradley J. Vogt	Less than 1 year	Partner - Capital Research Global Investors
Steven T. Watson	2 years	Partner - Capital International Investors
Philip Winston	6 years	Partner - Capital International Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds — and not the holders of variable insurance contracts — are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

American Funds Insurance Series® Capital World Bond Fund

Summary prospectus Class 1 shares May 1, 2020

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objective The fund's investment objective is to provide you, over the long term, with a high level of total return consistent with prudent investment management. Total return comprises the income generated by the fund and the changes in the market value of the fund's investments.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.53%
Other expenses	0.06
Total annual fund operating expenses	0.59
Fee waiver*	0.10
Total annual fund operating expenses after fee waiver	0.49

^{*} The investment adviser is currently waiving a portion of its management fee equal to .10% of the fund's net assets. This waiver will be in effect through at least May 1, 2021. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$50	\$179	\$319	\$728

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 159% of the average value of its portfolio.

Principal investment strategies Under normal market circumstances, the fund invests at least 80% of its assets in bonds and other debt securities, which may be represented by other investment instruments, including derivatives. The fund invests primarily in debt securities, including asset-backed and mortgage-backed securities and securities of governmental, supranational and corporate issuers denominated in various currencies, including U.S. dollars. The fund may invest substantially in securities of issuers domiciled outside the United States, including issuers domiciled in developing countries. Normally, the fund invests substantially in investment-grade bonds (rated Baa3 or better or BBB- or better by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser). The fund may also invest up to 25% of its assets in lower quality, higher yielding debt securities (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser). Such securities are sometimes referred to as "junk bonds." The total return of the fund will be the result of interest income, changes in the market value of the fund's investments and changes in the values of other currencies relative to the U.S. dollar.

The fund may invest in certain derivative instruments. A derivative is a financial contract, the value of which is based on the value of an underlying financial asset (such as a stock, bond or currency), a reference rate or a market index. The fund may invest in a derivative only if, in the opinion of the investment adviser, the expected risks and rewards of the proposed investment are consistent with the investment objective and strategies of the fund as disclosed in this prospectus and in the fund's statement of additional information.

The fund is nondiversified, which allows it to invest a greater percentage of its assets in any one issuer than would otherwise be the case. However, the fund intends to limit its investments in the securities of any single issuer.

Prior to May 1, 2020, the fund was called Global Bond Fund.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively priced securities that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time.

Market conditions - The prices of, and the income generated by, the securities held by the fund may decline - sometimes rapidly or unpredictably - due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks - The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in debt instruments – The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not quarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Liquidity risk – Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Investing in lower rated debt instruments - Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

Currency - The prices of, and the income generated by, many debt securities held by the fund may also be affected by changes in relative currency values. If the U.S. dollar appreciates against foreign currencies, the value in U.S. dollars of the fund's securities denominated in such currencies would generally fall and vice versa. U.S. dollar-denominated securities of foreign issuers may also be affected by changes in relative currency values.

Investing in derivatives - The use of derivatives involves a variety of risks, which may be different from, or greater than, the risks associated with investing in traditional securities, such as stocks and bonds. Changes in the value of a derivative may not correlate perfectly with, and may be more sensitive to market events than, the underlying asset, rate or index, and a derivative instrument may expose the fund to losses in excess of its initial investment. Derivatives may be difficult to value, difficult for the fund to buy or sell at an opportune time or price and difficult, or even impossible, to terminate or otherwise offset. The fund's use of derivatives may result in losses to the fund, and investing in derivatives may reduce the fund's returns and increase the fund's price volatility. The fund's counterparty to a derivative transaction (including, if applicable, the fund's clearing broker, the derivatives exchange or the clearinghouse) may be unable or unwilling to honor its financial obligations in respect of the transaction. In certain cases, the fund may be hindered or delayed in exercising remedies against or closing out derivative instruments with a counterparty, which may result in additional losses.

Investing in inflation-linked bonds – The values of inflation-linked bonds generally fluctuate in response to changes in real interest rates – i.e., rates of interest after factoring in inflation. A rise in real interest rates may cause the prices of inflation-linked securities to fall, while a decline in real interest rates may cause the prices to increase. Inflation-linked bonds may experience greater losses than other debt securities with similar durations when real interest rates rise faster than nominal interest rates. There can be no assurance that the value of an inflation-linked security will be directly correlated to changes in interest rates; for example, if interest rates rise for reasons other than inflation, the increase may not be reflected in the security's inflation measure.

Investing in inflation-linked bonds may also reduce the fund's distributable income during periods of deflation. If prices for goods and services decline throughout the economy, the principal and income on inflation-linked securities may decline and result in losses to the fund.

Investing outside the United States - Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

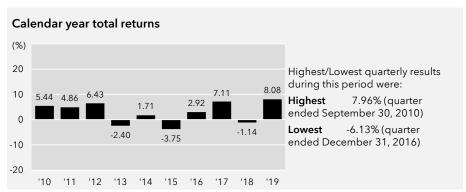

Investing in emerging markets - Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Nondiversification risk – As a nondiversified fund, the fund has the ability to invest a larger percentage of its assets in the securities of a smaller number of issuers than a diversified fund. Although the fund does not intend to limit its investments to the securities of a small number of issuers, if it were to do so, poor performance by a single large holding could adversely impact the fund's investment results more than if the fund were invested in a larger number of issuers.

Management - The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The Lipper Global Income Funds Average includes funds that disclose investment objectives and/or strategies reasonably comparable to those of the fund. The Consumer Price Index provides a comparison of the fund's results to inflation. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 10/4/06)	8.08%	2.54%	2.85%	4.07%
Bloomberg Barclays Global Aggregate Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	6.84	2.31	2.48	3.59
Lipper Global Income Funds Average (reflects no deduction for sales charges, account fees or U.S. federal income taxes)	8.19	2.51	3.14	N/A
Consumer Price Index	2.29	1.82	1.75	1.80

Management

Investment adviser Capital Research and Management CompanySM

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Andrew A. Cormack	1 year	Vice President - Capital Fixed Income Investors
David A. Daigle	5 years	Partner – Capital Fixed Income Investors
Thomas H. Høgh	14 years	Partner – Capital Fixed Income Investors
Robert H. Neithart	7 years	Partner – Capital Fixed Income Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds — and not the holders of variable insurance contracts — are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

American Funds Insurance Series® Global Growth Fund

Summary prospectus Class 1 shares May 1, 2020

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objective The fund's investment objective is to provide long-term growth of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.52%
Other expenses	0.05
Total annual fund operating expenses	0.57

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$58	\$183	\$318	\$714

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 14% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks of companies around the world that the investment adviser believes have the potential for growth. As a fund that seeks to invest globally, the fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but in no fewer than three countries). Under normal market conditions, the fund will invest significantly in issuers domiciled outside the United States (i.e., at least 40% of its net assets, unless market conditions are not deemed favorable by the fund's investment adviser, in which case the fund would invest at least 30% of its net assets in issuers outside the United States).

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions - The prices of, and the income generated by, the common stocks and other securities held by the fund may decline sometimes rapidly or unpredictably - due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks - The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks - Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

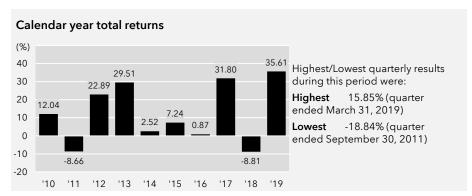

Investing outside the United States - Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets - Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Management - The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objective The fund's investment objective is to provide long-term growth of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.70%
Other expenses	0.06
Total annual fund operating expenses	0.76

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$78	\$243	\$422	\$942

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 50% of the average value of its portfolio.

Principal investment strategies Normally, the fund invests at least 80% of its net assets in growth-oriented common stocks and other equity type securities of companies with small market capitalizations, measured at the time of purchase. However, the fund's holdings of small capitalization stocks may fall below the 80% threshold due to subsequent market action. The investment adviser currently defines "small market capitalization" companies as companies with market capitalizations of \$6.0 billion or less. The investment adviser has periodically re-evaluated and adjusted this definition and may continue to do so in the future. As a fund that seeks to invest globally, the fund will allocate its assets among securities of companies domiciled in various countries, including the United States and countries with emerging markets (but in no fewer than three countries). Under normal market conditions, the fund will invest significantly in issuers domiciled outside the United States (i.e., at least 40% of its net assets, unless market conditions are not deemed favorable by the fund's investment adviser, in which case the fund would invest at least 30% of its net assets in issuers outside the United States).

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions - The prices of, and the income generated by, the common stocks and other securities held by the fund may decline sometimes rapidly or unpredictably - due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks - The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks - Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks may be more volatile than stocks of larger, more established companies, particularly during times of market turmoil.

Investing outside the United States - Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

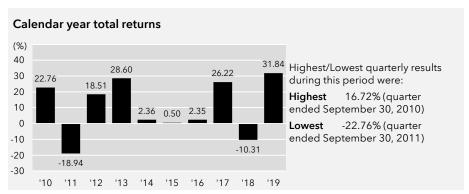

Investing in emerging markets - Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Liquidity risk - Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or quaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 4/30/98)	31.84%	8.95%	9.07%	9.70%
MSCI All Country World Small Cap Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	24.65	7.85	9.71	7.82

Management

Investment adviser Capital Research and Management CompanySM

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Michael Beckwith	1 year	Vice President - Capital Research Global Investors
Bradford F. Freer	2 years	Partner - Capital Research Global Investors
Claudia P. Huntington	7 years	Partner - Capital Research Global Investors
Harold H. La	12 years	Partner - Capital Research Global Investors
Aidan O'Connell	6 years	Partner - Capital Research Global Investors
Gregory W. Wendt	8 vears	Partner – Capital Research Global Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds — and not the holders of variable insurance contracts — are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

American Funds Insurance Series® Growth Fund

Summary prospectus Class 1 shares May 1, 2020

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objective The fund's investment objective is to provide growth of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.32%
Other expenses	0.04
Total annual fund operating expenses	0.36

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$37	\$116	\$202	\$456

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 21% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks and seeks to invest in companies that appear to offer superior opportunities for growth of capital. The fund may invest up to 25% of its assets in common stocks and other securities of issuers domiciled outside the United States.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions - The prices of, and the income generated by, the common stocks and other securities held by the fund may decline sometimes rapidly or unpredictably - due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks - The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

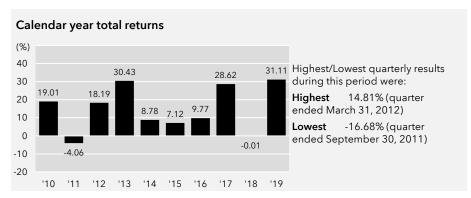

Investing in growth-oriented stocks - Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management - The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objectives The fund's investment objectives are to achieve long-term growth of capital and income.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.26%
Other expenses	0.04
Total annual fund operating expenses	0.30

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$31	\$97	\$169	\$381

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 27% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks or other securities that the investment adviser believes demonstrate the potential for appreciation and/or dividends. The fund may invest up to 15% of its assets, at the time of purchase, in securities of issuers domiciled outside the United States. The fund is designed for investors seeking both capital appreciation and income.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions - The prices of, and the income generated by, the common stocks and other securities held by the fund may decline sometimes rapidly or unpredictably - due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks - The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks - Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

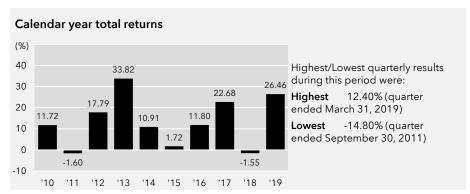

Investing in income-oriented stocks – The value of the fund's securities and income provided by the fund may be reduced by changes in the dividend policies of, and the capital resources available for dividend payments at, the companies in which the fund invests.

Investing outside the United States - Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Management – The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or quaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. American Funds Insurance Series® International Fund

Summary prospectus Class 1 shares May 1, 2020

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objective The fund's investment objective is to provide long-term growth of capital.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.49%
Other expenses	0.06
Total annual fund operating expenses	0.55

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$56	\$176	\$307	\$689

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 32% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks of companies domiciled outside the United States, including companies domiciled in emerging markets, that the investment adviser believes have the potential for growth.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions - The prices of, and the income generated by, the common stocks and other securities held by the fund may decline sometimes rapidly or unpredictably - due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks - The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks - Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments.

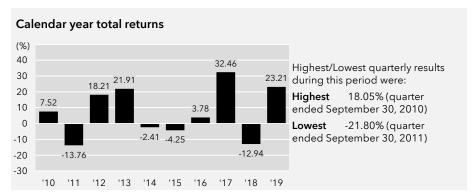

Investing outside the United States - Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in emerging markets.

Investing in emerging markets - Investing in emerging markets may involve risks in addition to and greater than those generally associated with investing in the securities markets of developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Management - The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 5/1/90)	23.21%	7.14%	6.29%	8.21%

Management

Investment adviser Capital Research and Management CompanySM

Portfolio managers The individuals primarily responsible for the portfolio management of the fund are:

Portfolio manager/ Series title (if applicable)	Portfolio manager experience in this fund	Primary title with investment adviser
Sung Lee Vice President	14 years	Partner - Capital Research Global Investors
Renaud H. Samyn Vice President	6 years	Partner - Capital Research Global Investors
Alfonso Barroso	11 years	Partner - Capital Research Global Investors
Jesper Lyckeus	13 years	Partner - Capital Research Global Investors
Christopher Thomsen	14 years	Partner - Capital Research Global Investors

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds — and not the holders of variable insurance contracts — are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

American Funds Insurance Series® New World Fund®

Summary prospectus Class 1 shares May 1, 2020

Beginning on January 1, 2021, as permitted by regulations adopted by the U.S. Securities and Exchange Commission, you may not receive paper copies of the fund's shareholder reports from the insurance company that offers your contract unless you specifically request paper copies from the insurance company or from your financial intermediary. Instead, the shareholder reports will be made available on a website, and the insurance company will notify you by mail each time a report is posted and provide you with a website link to access the report. Instructions for requesting paper copies will be provided by your insurance company. If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the insurance company electronically by following the instructions provided by the insurance company.

You may elect to receive paper copies of all future reports free of charge from the insurance company. You can inform the insurance company that you wish to continue receiving paper copies of your shareholder reports by following the instructions provided by the insurance company. Your election to receive paper reports will apply to all investment options available under your contract.

Before you invest, you may want to review the fund's prospectus and statement of additional information, which contain more information about the fund and its risks. You can find the fund's prospectus, statement of additional information, reports to shareholders and other information about the fund online at capitalgroup.com/afis. You can also get this information at no cost by calling (800) 421-9900, ext. 65413 or by sending an email request to afisclass1@americanfunds.com. The current prospectus and statement of additional information, dated May 1, 2020, are incorporated by reference into this summary prospectus.

Investment objective The fund's investment objective is long-term capital appreciation.

Fees and expenses of the fund This table describes the fees and expenses that you may pay if you buy and hold an interest in Class 1 shares of the fund. It does not reflect insurance contract fees and expenses. If insurance contract fees and expenses were reflected, expenses shown would be higher.

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	Class 1
Management fee	0.70%
Other expenses	0.07
Total annual fund operating expenses	0.77
Fee waiver*	0.18
Total annual fund operating expenses after fee waiver	0.59

^{*} The investment adviser is currently waiving a portion of its management fee equal to .18% of the fund's net assets. This waiver will be in effect through at least May 1, 2021. The waiver may only be modified or terminated with the approval of the fund's board.

Example This example is intended to help you compare the cost of investing in Class 1 shares of the fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the fund's operating expenses remain the same. The example does not reflect insurance contract expenses. If insurance contract expenses were reflected, expenses shown would be higher. The example reflects the fee waiver described above through the expiration date of such waiver and total annual fund operating expenses thereafter. No sales charge (load) or other fees are charged by the fund upon redemption, so you would incur these hypothetical costs whether or not you were to redeem your shares at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	1 year	3 years	5 years	10 years
Class 1	\$60	\$228	\$410	\$937

Portfolio turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's investment results. During the most recent fiscal year, the fund's portfolio turnover rate was 38% of the average value of its portfolio.

Principal investment strategies The fund invests primarily in common stocks of companies with significant exposure to countries with developing economies and/or markets. The securities markets of these countries may be referred to as emerging markets. The fund may invest in equity securities of any company, regardless of where it is based (including developed countries), if the fund's investment adviser determines that a significant portion of the company's assets or revenues (generally 20% or more) is attributable to developing countries.

Under normal market conditions, the fund invests at least 35% of its assets in equity and debt securities of issuers primarily based in qualified countries that have developing economies and/or markets. The fund may also, to a limited extent, invest in securities of issuers based in nonqualified developing countries.

In determining whether a country is qualified, the fund's investment adviser considers such factors as the country's per capita gross domestic product, the percentage of the country's economy that is industrialized, market capital as a percentage of gross domestic product, the overall regulatory environment, the presence of government regulation limiting or banning foreign ownership, and restrictions on repatriation of initial capital, dividends, interest and/or capital gains. The fund's investment adviser maintains a list of qualified countries and securities in which the fund may invest.

The fund may also invest in debt securities of issuers, including issuers of lower rated bonds (rated Ba1 or below and BB+ or below by Nationally Recognized Statistical Rating Organizations designated by the fund's investment adviser or unrated but determined to be of equivalent quality by the fund's investment adviser), with exposure to these countries. Bonds rated Ba1 or BB+ or below are sometimes referred to as "junk bonds."

In addition, the fund may invest in nonconvertible debt securities of issuers, including issuers of lower rated bonds and government bonds, that are primarily based in qualified countries or that have a significant portion of their assets or revenues attributable to developing countries.

The investment adviser uses a system of multiple portfolio managers in managing the fund's assets. Under this approach, the portfolio of the fund is divided into segments managed by individual managers.

The fund relies on the professional judgment of its investment adviser to make decisions about the fund's portfolio investments. The basic investment philosophy of the investment adviser is to seek to invest in attractively valued companies that, in its opinion, represent good, long-term investment opportunities. Securities may be sold when the investment adviser believes that they no longer represent relatively attractive investment opportunities.

Principal risks

This section describes the principal risks associated with investing in the fund. You may lose money by investing in the fund. The likelihood of loss may be greater if you invest for a shorter period of time. Investors in the fund should have a long-term perspective and be able to tolerate potentially sharp declines in value.

Market conditions - The prices of, and the income generated by, the common stocks and other securities held by the fund may decline sometimes rapidly or unpredictably - due to various factors, including events or conditions affecting the general economy or particular industries; overall market changes; local, regional or global political, social or economic instability; governmental, governmental agency or central bank responses to economic conditions; and currency exchange rate, interest rate and commodity price fluctuations.

Issuer risks - The prices of, and the income generated by, securities held by the fund may decline in response to various factors directly related to the issuers of such securities, including reduced demand for an issuer's goods or services, poor management performance, major litigation related to the issuer, changes in government regulations affecting the issuer or its competitive environment and strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives.

Investing in growth-oriented stocks - Growth-oriented common stocks and other equity-type securities (such as preferred stocks, convertible preferred stocks and convertible bonds) may involve larger price swings and greater potential for loss than other types of investments. These risks may be even greater in the case of smaller capitalization stocks.

Investing outside the United States – Securities of issuers domiciled outside the United States, or with significant operations or revenues outside the United States, may lose value because of adverse political, social, economic or market developments (including social instability, regional conflicts, terrorism and war) in the countries or regions in which the issuers operate or generate revenue. These securities may also lose value due to changes in foreign currency exchange rates against the U.S. dollar and/or currencies of other countries. Issuers of these securities may be more susceptible to actions of foreign governments, such as nationalization, currency blockage or the imposition of price controls or punitive taxes, each of which could adversely impact the value of these securities. Securities markets in certain countries may be more volatile and/or less liquid than those in the United States. Investments outside the United States may also be subject to different accounting practices and different regulatory, legal and reporting standards and practices, and may be more difficult to value, than those in the United States. In addition, the value of investments outside the United States may be reduced by foreign taxes, including foreign withholding taxes on interest and dividends. Further, there may be increased risks of delayed settlement of securities purchased or sold by the fund. The risks of investing outside the United States may be heightened in connection with investments in developing countries.

Investing in developing countries – Investing in countries with developing economies and/or markets may involve risks in addition to and greater than those generally associated with investing in developed countries. For instance, emerging market countries may have less developed legal and accounting systems than those in developed countries. The governments of these countries may be less stable and more likely to impose capital controls, nationalize a company or industry, place restrictions on foreign ownership and on withdrawing sale proceeds of securities from the country, and/or impose punitive taxes that could adversely affect the prices of securities. In addition, the economies of these countries may be dependent on relatively few industries that are more susceptible to local and global changes. Securities markets in these countries can also be relatively small and have substantially lower trading volumes. As a result, securities issued in these countries may be more volatile and less liquid, and may be more difficult to value, than securities issued in countries with more developed economies and/or markets. Less certainty with respect to security valuations may lead to additional challenges and risks in calculating the fund's net asset value. Additionally, emerging markets are more likely to experience problems with the clearing and settling of trades and the holding of securities by banks, agents and depositories that are less established than those in developed countries.

Investing in debt instruments - The prices of, and the income generated by, bonds and other debt securities held by the fund may be affected by changing interest rates and by changes in the effective maturities and credit ratings of these securities.

Rising interest rates will generally cause the prices of bonds and other debt securities to fall. A general rise in interest rates may cause investors to sell debt securities on a large scale, which could also adversely affect the price and liquidity of debt securities and could also result in increased redemptions from the fund. Falling interest rates may cause an issuer to redeem, call or refinance a debt security before its stated maturity, which may result in the fund failing to recoup the full amount of its initial investment and having to reinvest the proceeds in lower yielding securities. Longer maturity debt securities generally have greater sensitivity to changes in interest rates and may be subject to greater price fluctuations than shorter maturity debt securities.

Bonds and other debt securities are also subject to credit risk, which is the possibility that the credit strength of an issuer or guarantor will weaken or be perceived to be weaker, and/or an issuer of a debt security will fail to make timely payments of principal or interest and the security will go into default. A downgrade or default affecting any of the fund's securities could cause the value of the fund's shares to decrease. Lower quality debt securities generally have higher rates of interest and may be subject to greater price fluctuations than higher quality debt securities. Credit risk is gauged, in part, by the credit ratings of the debt securities in which the fund invests. However, ratings are only the opinions of the rating agencies issuing them and are not guarantees as to credit quality or an evaluation of market risk. The fund's investment adviser relies on its own credit analysts to research issuers and issues in seeking to assess credit and default risks.

Investing in lower rated debt instruments – Lower rated bonds and other lower rated debt securities generally have higher rates of interest and involve greater risk of default or price declines due to changes in the issuer's creditworthiness than those of higher quality debt securities. The market prices of these securities may fluctuate more than the prices of higher quality debt securities and may decline significantly in periods of general economic difficulty. These risks may be increased with respect to investments in junk bonds.

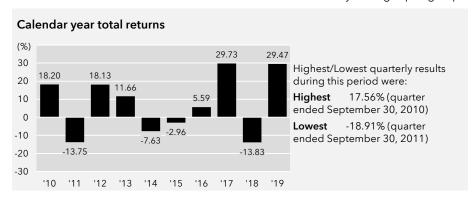

Liquidity risk - Certain fund holdings may be or may become difficult or impossible to sell, particularly during times of market turmoil. Liquidity may be impacted by the lack of an active market for a holding, legal or contractual restrictions on resale, or the reduced number and capacity of market participants to make a market in such holding. Market prices for less liquid or illiquid holdings may be volatile, and reduced liquidity may have an adverse impact on the market price of such holdings. Additionally, the sale of less liquid or illiquid holdings may involve substantial delays (including delays in settlement) and additional costs and the fund may be unable to sell such holdings when necessary to meet its liquidity needs or may be forced to sell at a loss.

Investing in small companies – Investing in smaller companies may pose additional risks. For example, it is often more difficult to value or dispose of small company stocks and more difficult to obtain information about smaller companies than about larger companies. Furthermore, smaller companies often have limited product lines, operating histories, markets and/or financial resources, may be dependent on one or a few key persons for management, and can be more susceptible to losses. Moreover, the prices of their stocks may be more volatile than stocks of larger, more established companies, particularly during times of market turmoil.

Management - The investment adviser to the fund actively manages the fund's investments. Consequently, the fund is subject to the risk that the methods and analyses, including models, tools and data, employed by the investment adviser in this process may be flawed or incorrect and may not produce the desired results. This could cause the fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Your investment in the fund is not a bank deposit and is not insured or quaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, entity or person. You should consider how this fund fits into your overall investment program.

Investment results The following bar chart shows how the investment results of the Class 1 shares of the fund have varied from year to year, and the following table shows how the fund's average annual total returns for various periods compare with a broad measure of securities market results and other applicable measures of market results. This information provides some indication of the risks of investing in the fund. The MSCI Emerging Markets Index reflects the market sectors in which the fund invests. The J.P. Morgan Emerging Markets Bond Index (EMBI) Global Diversified reflects the bond market sectors in which the fund invests. Past investment results (before and after taxes) are not predictive of future investment results. Figures shown reflect fees and expenses associated with an investment in the fund, but do not reflect insurance contract fees and expenses. If insurance contract fees and expenses were included, results would have been lower. Updated information on the fund's investment results can be obtained by visiting capitalgroup.com/afis.

Average annual total returns For the periods ended December 31, 2019:	1 year	5 years	10 years	Lifetime
Fund (inception date – 6/17/99)	29.47%	8.20%	6.30%	8.49%
MSCI All Country World Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	26.60	8.41	8.79	5.15
MSCI Emerging Markets Index (reflects no deduction for sales charges, account fees, expenses or U.S. federal income taxes)	18.42	5.61	3.68	7.43
J.P. Morgan Emerging Markets Bond Index (EMBI) Global Diversified (reflects no deductions for account fees, expenses or U.S. federal income taxes)	15.05	6.24	6.90	9.15

Purchase and sale of fund shares Shares of the fund are not sold directly to the general public. The fund is offered only as an underlying investment option for variable insurance contracts, and insurance company separate accounts and qualified feeder funds — and not the holders of variable insurance contracts — are the shareholders of the fund. Although the fund does not require a minimum amount for initial or subsequent purchases from insurance companies, your insurance company may impose investment minimums for your purchase of the fund.

You may sell (redeem) shares on any business day. You must sell (redeem) shares through your insurance company.

Tax information See your variable insurance contract prospectus for information regarding the federal income tax treatment of your variable insurance contract and related distributions.

Payments to broker-dealers and other financial intermediaries The fund is not sold directly to the general public but instead is offered as an underlying investment option for variable insurance contracts. The fund and its related companies may make payments to the sponsoring insurance company (or its affiliates) for distribution and/or other services. These payments may be a factor that the insurance company considers in including the fund as an underlying investment option in the variable insurance contract. The prospectus (or other offering document) for your variable insurance contract may contain additional information about these payments.

Vanguard Variable Insurance Fund Capital Growth Portfolio Summary Prospectus

April 28, 2020

The Portfolio's statutory Prospectus and Statement of Additional Information dated April 28, 2020, as may be amended or supplemented, are incorporated into and made part of this Summary Prospectus by reference.

Before you invest, you may want to review the Portfolio's Prospectus, which contains more information about the Portfolio and its risks. You can find the Portfolio's Prospectus and other information about the Portfolio online at www.vanguard.com/prospectus. You can also obtain this information at no cost by calling 800-522-5555 or by sending an email request to online@vanguard.com.

See the inside front cover for important information about access to your fund's annual and semiannual shareholder reports.

The Securities and Exchange Commission (SEC) has not approved or disapproved these securities or passed upon the adequacy of this prospectus. Any representation to the contrary is a criminal offense.

Important information about access to shareholder reports

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of your fund's annual and semiannual shareholder reports will no longer be sent to you by mail, unless you specifically request them. Instead, you will be notified by mail each time a report is posted on the website and will be provided with a link to access the report.

If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the fund electronically by contacting your financial intermediary (such as a broker-dealer or bank) or, if you invest directly with the fund, by calling Vanguard at one of the phone numbers on the back cover of this prospectus or by logging on to *vanguard.com*.

You may elect to receive paper copies of all future shareholder reports free of charge. If you invest through a financial intermediary, you can contact the intermediary to request that you continue to receive paper copies. If you invest directly with the fund, you can call Vanguard at one of the phone numbers on the back cover of this prospectus or log on to *vanguard.com*. Your election to receive paper copies will apply to all the funds you hold through an intermediary or directly with Vanguard.

Investment Objective

The Portfolio seeks to provide long-term capital appreciation.

Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold shares of the Portfolio. The expenses shown in the table and in the example that follows do not reflect additional fees and expenses associated with the annuity or life insurance program through which you invest. If those additional fees and expenses were included, overall expenses would be higher.

Annual Portfolio Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.33%
12b-1 Distribution Fee	None
Other Expenses	0.01%
Total Annual Portfolio Operating Expenses	0.34%

Example

The following example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. It illustrates the hypothetical expenses that you would incur over various periods if you were to invest \$10,000 in the Portfolio's shares. This example assumes that the Portfolio provides a return of 5% each year and that total annual portfolio operating expenses remain as stated in the preceding table. You would incur these hypothetical expenses whether or not you were to redeem your investment at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$35	\$109	\$191	\$431

Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual portfolio operating expenses or in the previous expense example, reduce the Portfolio's performance. During the most recent fiscal year, the Portfolio's turnover rate was 5% of the average value of its portfolio.

Principal Investment Strategies

The Portfolio invests in stocks considered to have above-average earnings growth potential that is not reflected in their current market prices. The Portfolio consists predominantly of large- and mid-capitalization stocks.

Principal Risks

An investment in the Portfolio could lose money over short or long periods of time. You should expect the Portfolio's share price and total return to fluctuate within a wide range. The Portfolio is subject to the following risks, which could affect the Portfolio's performance:

- Stock market risk, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices.
- Asset concentration risk, which is the chance that, because the Portfolio tends to invest a high percentage of assets in its ten largest holdings, the Portfolio's performance may be hurt disproportionately by the poor performance of relatively few stocks.

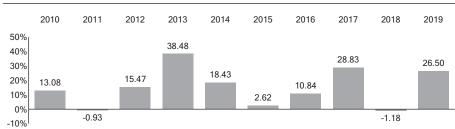

- Investment style risk, which is the chance that returns from large- and mid-capitalization growth stocks will trail returns from the overall stock market. Large- and mid-cap stocks each tend to go through cycles of doing better—or worse—than other segments of the stock market or the stock market in general. These periods have, in the past, lasted for as long as several years. Historically, mid-cap stocks have been more volatile in price than large-cap stocks. The stock prices of mid-size companies tend to experience greater volatility because, among other things, these companies tend to be more sensitive to changing economic conditions.
- Manager risk, which is the chance that poor security selection will cause the Portfolio to underperform relevant benchmarks or other funds with a similar investment objective. In addition, significant investments in the health care and information technology sectors subject the Portfolio to proportionately higher exposure to the risks of these sectors.

An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Annual Total Returns

The following bar chart and table are intended to help you understand the risks of investing in the Portfolio. The bar chart shows how the performance of the Portfolio has varied from one calendar year to another over the periods shown. The table shows how the average annual total returns of the Portfolio compare with those of a relevant market index, which has investment characteristics similar to those of the Portfolio. The Portfolio's returns are net of its expenses, but do not reflect additional fees and expenses that are deducted by the annuity or life insurance program through which you invest. If such fees and expenses were included in the calculation of the Portfolio's returns, the returns would be lower. Keep in mind that the Portfolio's past performance does not indicate how the Portfolio will perform in the future. Updated performance information is available on our website for Financial Advisors at *advisors.vanguard.com* or by calling Vanguard toll-free at 800-522-5555.

Annual Total Returns — Capital Growth Portfolio

During the periods shown in the bar chart, the highest and lowest returns for a calendar quarter were:

	Total Return	Quarter
Highest	13.95%	March 31, 2013
Lowest	-15.36%	September 30, 2011

Average Annual Total Returns for Periods Ended December 31, 2019

	1 Year	5 Years	10 Years
Capital Growth Portfolio	26.50%	12.87%	14.54%
Standard & Poor's 500 Index			
(reflects no deduction for fees or expenses)	31.49%	11.70%	13.56%

Investment Advisor

PRIMECAP Management Company (PRIMECAP)

Theo A. Kolokotrones, Chairman of PRIMECAP. He has co-managed the Portfolio since its inception in 2002.

Joel P. Fried, President of PRIMECAP. He has co-managed the Portfolio since its inception in 2002.

Alfred W. Mordecai, Vice Chairman of PRIMECAP. He has co-managed the Portfolio since its inception in 2002.

M. Mohsin Ansari, Executive Vice President of PRIMECAP. He has co-managed the Portfolio since 2007.

James Marchetti, Executive Vice President, Portfolio Manager, and Principal of PRIMECAP. He has co-managed the Portfolio since 2015.

Tax Information

The Portfolio normally distributes its net investment income and net realized capital gains, if any, to its shareholders, which are the insurance company separate accounts that sponsor your variable annuity or variable life insurance contract. The tax consequences to you of your investment in the Portfolio depend on the provisions of the annuity or life insurance contract through which you invest. For more information on taxes, please refer to the prospectus of the annuity or life insurance contract through which Portfolio shares are offered.

Payments to Financial Intermediaries

The Portfolio and its investment advisor do not pay financial intermediaries for sales of Portfolio shares.

Vanguard Variable Insurance Fund Equity Income Portfolio Summary Prospectus

April 28, 2020

The Portfolio's statutory Prospectus and Statement of Additional Information dated April 28, 2020, as may be amended or supplemented, are incorporated into and made part of this Summary Prospectus by reference.

Before you invest, you may want to review the Portfolio's Prospectus, which contains more information about the Portfolio and its risks. You can find the Portfolio's Prospectus and other information about the Portfolio online at www.vanguard.com/prospectus. You can also obtain this information at no cost by calling 800-522-5555 or by sending an email request to online@vanguard.com.

See the inside front cover for important information about access to your fund's annual and semiannual shareholder reports.

The Securities and Exchange Commission (SEC) has not approved or disapproved these securities or passed upon the adequacy of this prospectus. Any representation to the contrary is a criminal offense.

Important information about access to shareholder reports

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of your fund's annual and semiannual shareholder reports will no longer be sent to you by mail, unless you specifically request them. Instead, you will be notified by mail each time a report is posted on the website and will be provided with a link to access the report.

If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the fund electronically by contacting your financial intermediary (such as a broker-dealer or bank) or, if you invest directly with the fund, by calling Vanguard at one of the phone numbers on the back cover of this prospectus or by logging on to *vanguard.com*.

You may elect to receive paper copies of all future shareholder reports free of charge. If you invest through a financial intermediary, you can contact the intermediary to request that you continue to receive paper copies. If you invest directly with the fund, you can call Vanguard at one of the phone numbers on the back cover of this prospectus or log on to *vanguard.com*. Your election to receive paper copies will apply to all the funds you hold through an intermediary or directly with Vanguard.

Investment Objective

The Portfolio seeks to provide an above-average level of current income and reasonable long-term capital appreciation.

Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold shares of the Portfolio. The expenses shown in the table and in the example that follows do not reflect additional fees and expenses associated with the annuity or life insurance program through which you invest. If those additional fees and expenses were included, overall expenses would be higher.

Annual Portfolio Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.28%
12b-1 Distribution Fee	None
Other Expenses	0.02%
Total Annual Portfolio Operating Expenses	0.30%

Example

The following example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. It illustrates the hypothetical expenses that you would incur over various periods if you were to invest \$10,000 in the Portfolio's shares. This example assumes that the Portfolio provides a return of 5% each year and that total annual portfolio operating expenses remain as stated in the preceding table. You would incur these hypothetical expenses whether or not you were to redeem your investment at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$31	\$97	\$169	\$381

Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual portfolio operating expenses or in the previous expense example, reduce the Portfolio's performance. During the most recent fiscal year, the Portfolio's turnover rate was 33% of the average value of its portfolio.

Principal Investment Strategies

The Portfolio invests mainly in common stocks of mid-size and large companies whose stocks typically pay above-average levels of dividend income and are, in the opinion of the purchasing advisor, undervalued relative to similar stocks. In addition, the advisors generally look for companies that they believe are committed to paying dividends consistently. Under normal circumstances, the Portfolio will invest at least 80% of its assets in equity securities. The Portfolio's 80% policy may be changed only upon 60 days' notice to shareholders. The Portfolio uses multiple investment advisors. Each advisor independently selects and maintains a portfolio of common stocks for the Portfolio.

Principal Risks

An investment in the Portfolio could lose money over short or long periods of time. You should expect the Portfolio's share price and total return to fluctuate within a wide range. The Portfolio is subject to the following risks, which could affect the Portfolio's performance:

• Stock market risk, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices.

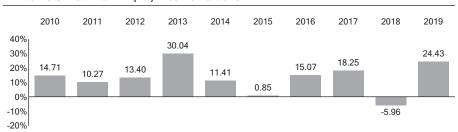

- Investment style risk, which is the chance that returns from mid- and large-capitalization dividend-paying value stocks will trail returns from the overall stock market. Mid- and large-cap stocks each tend to go through cycles of doing better—or worse—than other segments of the stock market or the stock market in general. These periods have, in the past, lasted for as long as several years. Historically, mid-cap stocks have been more volatile in price than large-cap stocks. The stock prices of mid-size companies tend to experience greater volatility because, among other things, these companies tend to be more sensitive to changing economic conditions.
- *Manager risk*, which is the chance that poor security selection will cause the Portfolio to underperform relevant benchmarks or other funds with a similar investment objective.

An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Annual Total Returns

The following bar chart and table are intended to help you understand the risks of investing in the Portfolio. The bar chart shows how the performance of the Portfolio has varied from one calendar year to another over the periods shown. The table shows how the average annual total returns of the Portfolio compare with those of a relevant market index and a comparative benchmark, which have investment characteristics similar to those of the Portfolio. The Portfolio's returns are net of its expenses but do not reflect additional fees and expenses that are deducted by the annuity or life insurance program through which you invest. If such fees and expenses were included in the calculation of the Portfolio's returns, the returns would be lower. Returns for the Variable Insurance Equity Income Funds Average are derived from data provided by Lipper, a Thomson Reuters Company. Keep in mind that the Portfolio's past performance does not indicate how the Portfolio will perform in the future. Updated performance information is available on our website for Financial Advisors at advisors.vanguard.com or by calling Vanguard toll-free at 800-522-5555.

Annual Total Returns — Equity Income Portfolio

During the periods shown in the bar chart, the highest and lowest returns for a calendar quarter were:

	Total Return	Quarter
Highest	13.79%	December 31, 2011
Lowest	-10.71%	September 30, 2011

Average Annual Total Returns for Periods Ended December 31, 2019

	1 Year	5 Years	10 Years
Equity Income Portfolio	24.43%	9.93%	12.81%
Comparative Benchmarks (reflect no deduction for fees or expenses)			
FTSE High Dividend Yield Index	24.24%	9.86%	12.95%
Variable Insurance Equity Income Funds Average	24.33	7.63	10.42

Investment Advisors

Wellington Management Company LLP (Wellington Management)

The Vanguard Group, Inc. (Vanguard)

Portfolio Managers

W. Michael Reckmeyer, III, CFA, Senior Managing Director and Equity Portfolio Manager of Wellington Management. He has managed a portion of the Portfolio since 2007.

James P. Stetler, Senior Portfolio Manager at Vanguard. He has managed a portion of the Portfolio since 2003 (co-managed since 2012).

Binbin Guo, Ph.D., Principal of Vanguard and head of the Alpha Equity Investment team within Vanguard's Quantitative Equity Group. He has co-managed a portion of the Portfolio since 2016.

Tax Information

The Portfolio normally distributes its net investment income and net realized capital gains, if any, to its shareholders, which are the insurance company separate accounts that sponsor your variable annuity or variable life insurance contract. The tax consequences to you of your investment in the Portfolio depend on the provisions of the annuity or life insurance contract through which you invest. For more information on taxes, please refer to the prospectus of the annuity or life insurance contract through which Portfolio shares are offered.

Payments to Financial Intermediaries

The Portfolio and its investment advisors do not pay financial intermediaries for sales of Portfolio shares.

Vanguard Variable Insurance Fund International Portfolio Summary Prospectus

April 28, 2020

The Portfolio's statutory Prospectus and Statement of Additional Information dated April 28, 2020, as may be amended or supplemented, are incorporated into and made part of this Summary Prospectus by reference.

Before you invest, you may want to review the Portfolio's Prospectus, which contains more information about the Portfolio and its risks. You can find the Portfolio's Prospectus and other information about the Portfolio online at www.vanguard.com/prospectus. You can also obtain this information at no cost by calling 800-522-5555 or by sending an email request to online@vanguard.com.

See the inside front cover for important information about access to your fund's annual and semiannual shareholder reports.

The Securities and Exchange Commission (SEC) has not approved or disapproved these securities or passed upon the adequacy of this prospectus. Any representation to the contrary is a criminal offense.

Important information about access to shareholder reports

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of your fund's annual and semiannual shareholder reports will no longer be sent to you by mail, unless you specifically request them. Instead, you will be notified by mail each time a report is posted on the website and will be provided with a link to access the report.

If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the fund electronically by contacting your financial intermediary (such as a broker-dealer or bank) or, if you invest directly with the fund, by calling Vanguard at one of the phone numbers on the back cover of this prospectus or by logging on to *vanguard.com*.

You may elect to receive paper copies of all future shareholder reports free of charge. If you invest through a financial intermediary, you can contact the intermediary to request that you continue to receive paper copies. If you invest directly with the fund, you can call Vanguard at one of the phone numbers on the back cover of this prospectus or log on to *vanguard.com*. Your election to receive paper copies will apply to all the funds you hold through an intermediary or directly with Vanguard.

Investment Objective

The Portfolio seeks to provide long-term capital appreciation.

Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold shares of the Portfolio. The expenses shown in the table and in the example that follows do not reflect additional fees and expenses associated with the annuity or life insurance program through which you invest. If those additional fees and expenses were included, overall expenses would be higher.

Annual Portfolio Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.36%
12b-1 Distribution Fee	None
Other Expenses	0.02%
Total Annual Portfolio Operating Expenses	0.38%

Example

The following example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. It illustrates the hypothetical expenses that you would incur over various periods if you were to invest \$10,000 in the Portfolio's shares. This example assumes that the Portfolio provides a return of 5% each year and that total annual portfolio operating expenses remain as stated in the preceding table. You would incur these hypothetical expenses whether or not you were to redeem your investment at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$39	\$122	\$213	\$480

Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual portfolio operating expenses or in the previous expense example, reduce the Portfolio's performance. During the most recent fiscal year, the Portfolio's turnover rate was 14% of the average value of its portfolio.

Principal Investment Strategies

The Portfolio invests predominantly in the stocks of companies located outside the United States and is expected to diversify its assets in countries across developed and emerging markets. In selecting stocks, the Portfolio's advisors evaluate foreign markets around the world and choose large-, mid-, and small-capitalization companies considered to have above-average growth potential. The Portfolio uses multiple investment advisors. Each advisor independently selects and maintains a portfolio of common stocks for the Portfolio.

Principal Risks

An investment in the Portfolio could lose money over short or long periods of time. You should expect the Portfolio's share price and total return to fluctuate within a wide range. The Portfolio is subject to the following risks, which could affect the Portfolio's performance:

• *Investment style risk*, which is the chance that returns from non-U.S. growth stocks and, to the extent that the Portfolio is invested in them, small- and mid-capitalization stocks, will trail returns from global stock markets. Historically, non-U.S. small- and mid-cap stocks have been more volatile in price than the

large-cap stocks that dominate the global markets, and they often perform quite differently.

- Stock market risk, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices. In addition, investments in foreign stocks can be riskier than U.S. stock investments. Foreign stocks may be more volatile and less liquid than U.S. stocks. The prices of foreign stocks and the prices of U.S. stocks may move in opposite directions.
- Country/regional risk, which is the chance that world events—such as political upheaval, financial troubles, or natural disasters—will adversely affect the value of securities issued by companies in foreign countries or regions. Because the Portfolio may invest a large portion of its assets in securities of companies located in any one country or region, including emerging markets, the Portfolio's performance may be hurt disproportionately by the poor performance of its investments in that area. Country/regional risk is especially high in emerging markets.
- *Currency risk*, which is the chance that the value of a foreign investment, measured in U.S. dollars, will decrease because of unfavorable changes in currency exchange rates. Currency risk is especially high in emerging markets.
- Manager risk, which is the chance that poor security selection will cause the Portfolio to underperform relevant benchmarks or other funds with a similar investment objective. In addition, significant investment in the consumer discretionary sector subjects the Portfolio to proportionately higher exposure to the risks of this sector.

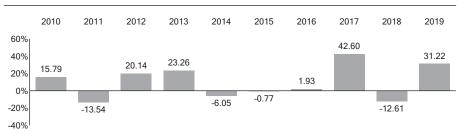

An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Annual Total Returns

The following bar chart and table are intended to help you understand the risks of investing in the Portfolio. The bar chart shows how the performance of the Portfolio has varied from one calendar year to another over the periods shown. The table shows how the average annual total returns of the Portfolio compare with those of a relevant market index and a comparative index, which have investment characteristics similar to those of the Portfolio. The Spliced International Index reflects the performance of the MSCI EAFE Index through May 31, 2010, and the MSCI ACWI ex USA Index thereafter. MSCI ACWI ex USA Index returns are adjusted for withholding taxes. The Portfolio's returns are net of its expenses but do not reflect additional fees and expenses that are deducted by the annuity or life insurance program through which you invest. If

such fees and expenses were included in the calculation of the Portfolio's returns, the returns would be lower. Keep in mind that the Portfolio's past performance does not indicate how the Portfolio will perform in the future. Updated performance information is available on our website for Financial Advisors at *advisors.vanguard.com* or by calling Vanguard toll-free at 800-522-5555.

Annual Total Returns — International Portfolio

During the periods shown in the bar chart, the highest and lowest returns for a calendar quarter were:

	Total Return	Quarter
Highest	19.66%	September 30, 2010
Lowest	-22.20%	September 30, 2011

Average Annual Total Returns for Periods Ended December 31, 2019

	1 Year	5 Years	10 Years
International Portfolio	31.22%	10.59%	8.70%
Comparative Indexes			
(reflect no deduction for fees or expenses)			
MSCI ACWI ex USA Index	21.51%	5.51%	4.97%
Spliced International Index	21.51	5.51	4.68

Vanguard Variable Insurance Fund Small Company Growth Portfolio Summary Prospectus

April 28, 2020

The Portfolio's statutory Prospectus and Statement of Additional Information dated April 28, 2020, as may be amended or supplemented, are incorporated into and made part of this Summary Prospectus by reference.

Before you invest, you may want to review the Portfolio's Prospectus, which contains more information about the Portfolio and its risks. You can find the Portfolio's Prospectus and other information about the Portfolio online at www.vanguard.com/prospectus. You can also obtain this information at no cost by calling 800-522-5555 or by sending an email request to online@vanguard.com.

See the inside front cover for important information about access to your fund's annual and semiannual shareholder reports.

The Securities and Exchange Commission (SEC) has not approved or disapproved these securities or passed upon the adequacy of this prospectus. Any representation to the contrary is a criminal offense.

Important information about access to shareholder reports

Beginning on January 1, 2021, as permitted by regulations adopted by the SEC, paper copies of your fund's annual and semiannual shareholder reports will no longer be sent to you by mail, unless you specifically request them. Instead, you will be notified by mail each time a report is posted on the website and will be provided with a link to access the report.

If you have already elected to receive shareholder reports electronically, you will not be affected by this change and do not need to take any action. You may elect to receive shareholder reports and other communications from the fund electronically by contacting your financial intermediary (such as a broker-dealer or bank) or, if you invest directly with the fund, by calling Vanguard at one of the phone numbers on the back cover of this prospectus or by logging on to *vanguard.com*.

You may elect to receive paper copies of all future shareholder reports free of charge. If you invest through a financial intermediary, you can contact the intermediary to request that you continue to receive paper copies. If you invest directly with the fund, you can call Vanguard at one of the phone numbers on the back cover of this prospectus or log on to *vanguard.com*. Your election to receive paper copies will apply to all the funds you hold through an intermediary or directly with Vanguard.

Investment Objective

The Portfolio seeks to provide long-term capital appreciation.

Fees and Expenses

The following table describes the fees and expenses you may pay if you buy and hold shares of the Portfolio. The expenses shown in the table and in the example that follows do not reflect additional fees and expenses associated with the annuity or life insurance program through which you invest. If those additional fees and expenses were included, overall expenses would be higher.

Annual Portfolio Operating Expenses

(Expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.30%
12b-1 Distribution Fee	None
Other Expenses	0.02%
Total Annual Portfolio Operating Expenses	0.32%

Example

The following example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other mutual funds. It illustrates the hypothetical expenses that you would incur over various periods if you were to invest \$10,000 in the Portfolio's shares. This example assumes that the Portfolio provides a return of 5% each year and that total annual portfolio operating expenses remain as stated in the preceding table. You would incur these hypothetical expenses whether or not you were to redeem your investment at the end of the given period. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$33	\$103	\$180	\$406

Portfolio Turnover

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual portfolio operating expenses or in the previous expense example, reduce the Portfolio's performance. During the most recent fiscal year, the Portfolio's turnover rate was 58% of the average value of its portfolio.

Principal Investment Strategies

Under normal circumstances, the Portfolio invests at least 80% of its assets primarily in common stocks of small companies. These companies tend to be unseasoned but are considered by the Portfolio's advisors to have superior growth potential. Also, these companies often provide little or no dividend income. The Portfolio's 80% policy may be changed only upon 60 days' notice to shareholders. The Portfolio uses multiple investment advisors. Each advisor independently selects and maintains a portfolio of common stocks for the Portfolio.

Principal Risks

An investment in the Portfolio could lose money over short or long periods of time. You should expect the Portfolio's share price and total return to fluctuate within a wide range. The Portfolio is subject to the following risks, which could affect the Portfolio's performance:

• Stock market risk, which is the chance that stock prices overall will decline. Stock markets tend to move in cycles, with periods of rising prices and periods of falling prices.

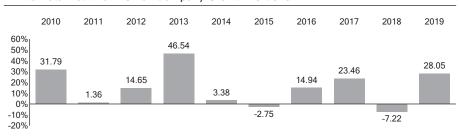

- Investment style risk, which is the chance that returns from small-capitalization growth stocks will trail returns from the overall stock market. Historically, small-cap stocks have been more volatile in price than the large-cap stocks that dominate the overall market, and they often perform quite differently. The stock prices of small companies tend to experience greater volatility because, among other things, these companies tend to be more sensitive to changing economic conditions.
- *Manager risk*, which is the chance that poor security selection will cause the Portfolio to underperform relevant benchmarks or other funds with a similar investment objective. In addition, significant investments in the health care, industrial, and information technology sectors subject the Portfolio to proportionately higher exposure to the risks of these sectors.

An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency.

Annual Total Returns

The following bar chart and table are intended to help you understand the risks of investing in the Portfolio. The bar chart shows how the performance of the Portfolio has varied from one calendar year to another over the periods shown. The table shows how the average annual total returns of the Portfolio compare with those of a relevant market index, which has investment characteristics similar to those of the Portfolio. The Portfolio's returns are net of its expenses but do not reflect additional fees and expenses that are deducted by the annuity or life insurance program through which you invest. If such fees and expenses were included in the calculation of the Portfolio's returns, the returns would be lower. Keep in mind that the Portfolio's past performance does not indicate how the Portfolio will perform in the future. Updated performance information is available on our website for Financial Advisors at *advisors.vanguard.com* or by calling Vanguard toll-free at 800-522-5555.

Annual Total Returns — Small Company Growth Portfolio

During the periods shown in the bar chart, the highest and lowest returns for a calendar quarter were:

	Total Return	Quarter
Highest	17.62%	March 31, 2019
Lowest	-20.83%	December 31, 2018

Average Annual Total Returns for Periods Ended December 31, 2019

	1 Year	5 Years	10 Years
Small Company Growth Portfolio	28.05%	10.39%	14.29%
Russell 2500 Growth Index			
(reflects no deduction for fees or expenses)	32.65%	10.84%	14.01%
